: import, ship, or distribute for the purpose of selling or leasing or offering
: for sale or lease, any external radio frequency amplifier or amplifier kit
: capable of operation on any frequency or frequencies between 24 and 35 MHz.

That is not the complete rule. Otherwise, it would be illegal for the Ham manufacturers to sell amplifiers capable of being modified for 10 meter operation.

1719. Documentation Update

Newsgroup: rec.radio.cb
Date: 2001-06-16 23:08:22 UTC
From: AntiKeyClown Documentation <dicumentation@anti.com>
Message-ID: <3b2bd8d6$1@news2.mibx.net>
Source record: 85847

<FYI, a copy of recent email sent to AOL and optonline.net>

To AOL and Optonline.net,

I am bringing to your attention the following posts (below) from the newsgroup rec.radio.cb. The first is the most recent. I include two others for reference.

This post involves the illegal activity, as per Part 2.815 of Title 47 of the US Code of Federal Regulations, of advertising for sale a radio frequency amplifier capable of operation between 24 and 35 Megahertz. This is an offence that is punishable by fines, imprisonment, or both.

Free and open trade of this type of illegal equipment encourages others to do the same, and detracts from the criminal nature of such activities. It also deceives the public to believe that such activity is legal and/or acceptable behavior.

Illegal operation of radio transmitters and amplifiers causes interference to radio and television broadcast stations, and disrupts radio communications for emergency services and other licensed users. This type of "RF thievery" is analogous to an internet hacker that can "steal" an IP address, disrupting the peaceful and legal operation of the internet service provider that has legal right to that IP address.

Despite being asked to stop, this person "Train" continues to use both AOL and Optonline.net to post illegal items for sale on Usenet. I am confident that you will take any action that you feel is appropriate.

Thank you.

Sincerely,

Aaron H. Voobner

Date: 2001-06-16 23:12:06 UTC
From: Prozac <Prozac@BayshoreNetwork.com>
Message-ID: <aJRW6.18951$Zt6.9173908@news1.rdc2.pa.home.com>
Source record: 85860

I AM A BAD AMERICAN!!
I Am Your Worst Nightmare. I am a BAD American.

I like big cars, big tits, and big cigars.

I believe the money I make belongs to me and my family, not some mid-level governmental functionary with a bad comb-over who wants to give it away to crack addicts squirting out babies.

China approaches our plane in international waters with fighter jets, crashes into it forcing us into an emergency landing, seizes our plane and holds our crewmen captive and then demands an apology......here's your apology, China.....FUCK YOU!

I'm not in touch with my feelings and I like it that way, dammit.

I believe no one ever died because of something Ozzy Osbourne, Motley Crew or even Marilyn Manson recorded.

I think owning a gun doesn't make you a killer.

Japan uses a sneak attack on us during World War II and wreaks havoc on Pearl Harbor which forces the U.S. into the war. Then we recently apologized to Japan for dropping the bomb on Hiroshima which helped to end the war. Here's an amendment to that apology......FUCK YOU TOO!

I don't think being a minority makes you noble or victimized.

I don't celebrate Kwanzaa.

I believe that if you are selling me a Big Mac, you'd better do it in English.

I don't use the excuse "it's for the children" as a shield for unpopular opinions or actions.

I think fireworks should be legal on the 4th of July.

I think that being a student doesn't give you any more enlightenment than working at Blockbuster. In fact, if your parents are footing the bill to put your pansy ass through 4-7 years of college, you haven't begun to be enlightened.

I don't want to eat or drink anything with the words light, lite or fat-free on the package.

I know that Hillary Clinton is an lying, self-centered, power hungry bitch.

My heroes are Dale Earnhardt, John Wayne, The Beatles, and whoever invented beer.

I don't hate the rich. I don't pity the poor.

I think global warming is a big lie. Where were all those experts a couple of months ago, when I was freezing my ass off through a long winter?

I've never owned a slave, or was a slave, I didn't wander forty years in the desert after getting chased out of Egypt, I haven't burned any witches or been persecuted by the Turks and neither have you, so shut-the-fuck-up already.

I want to know which church is it exactly where the Rev. Jessie Jackson preaches. And where does he get his money. And why is he always part of the problem and not the solution.

I consider Al Sharpton and Louis Farrakhan the most racist people in America.

I think the cops have every right to shoot your sorry ass if you're running from them. I also think they have the right to pull your ass over if you are breaking the law, regardless of what color you are.

I think if you are too stupid to know how a ballot works, I don't want you deciding who should be running the most powerful nation in the world for the next four years.

I worry about dying before I get even.

I hate those bastards standing in the intersections trying to sell me crap or trying to guilt me into making 'donations' to their cause. These people should be targets.

I think if you are in the passing lane, and not passing, your license should be revoked, and you should be forced to ride the bus until you promise to never delay the rest of us again.

I enjoy watching high speed pursuits.

I believe that it doesn't take a village to raise a child, it takes two parents.

I think tattoos and piercing are fine if you want them, but please don't pretend they are a political statement.

I think Dr. Seuss was a genius.

I'm neither angry nor disenfranchised, no matter how desperately the mainstream media would like the world to believe otherwise.

I believe if she has her lips on your Mr. Happy, it is sex, and it is sex for both of you. This even applies when she is a fat pig with self esteem issues, and you are President of the United States.

If that makes me a bad American, then YES, I'm a bad American. You will get NO apology from me for it.

If you too are a bad American please forward this to everyone you know. We need our country back.

1722. FCC "don't care about CB"?

Newsgroup: rec.radio.cb
Date: 2001-06-16 23:34:31 UTC
From: AntiKeyClown Research Unit <research@anti.com>
Message-ID: <3b2bdef7$1@news2.mibx.net>
Source record: 85852

LONG BEACH, CA: The FCC has written Technician licensee Brett C. Rogers, KF6ZDS, citing monitoring information before the Commission alleging that the licensee has operated Amateur Radio equipment on and between 11-meter Citizens Band channels.
"Information further indicates that you have deliberately interfered with the communications of other operators, transmitted sound effects, utilized non type-accepted equipment and illegal amplifiers" on and between CB channels, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth wrote. "The District Director of our Los Angeles office warned you about this type of operation on December 23, 1999." Hollingsworth gave Rogers 30 days to explain "the full circumstances of any operation" the licensee may have conducted on 11 meters since January 1, 2000, and the equipment used.

April 17, 2001
Arthur C. Cook, III
361 Mountain Road
Greenwich, NY 12834
Re: Amateur Radio license KC2FZD

Dear Mr. Cook:
The Commission has received complaints that you have been operating on CB frequencies transmitting sound effects, recording other operators for playback on various frequencies and otherwise deliberately interfering with ongoing communications
on the CB service channels.

Please be advised that such operation will lead to enforcement action, including monetary fines and would jeopardize your Amateur Radio license. Please call me at 717-338-2502 to discuss this matter.

Aaron this info is 100% guaranteed to be true. i know the owner personally

and he is a slug who started the business using money he collected from disability he used to drive a truck. Since he has made a fortune of the amplifier business he is thinking of getting out the next year or so i guess

because of the heat. I am sure he avoided paying any type of taxes the past 3
years or so that he has been in business. He got his start with a guy named

Dan Frechette who now lives in Kankakee Illinois Dan worked for a guy in NJ
named Dave well since then Dan better known as "123" took davemades design

of amps, customers, method of operation, contacts etc and started the xforce

line with the info he jacked from dave while he worked there So now he teams

up with the ex- truck driver named ...Carl Curatola the current Owner of

Xforce . he is located at 630 West Bolles Ave West Chicago Illinois.. his e
mail is xforce151@aol.com he has done much business with exportradios.com

and exportsrus whom was just popped by the FCC. The funny part is that Dan

123 screwed davemade when he went out there to work for him for about 6 months he left dave with all daves design info etc and went back to Illinois

he then got togther with Carl and now they used this hijacked info to duplictae davemaeds amp which has been pretty much declared the best amp of
the keyclown crowd. The funny part is that the duo of Dan and Carl parted

ways when carl became greedy I hear and wanted all the money. Since he got

what he wanted out of Dan the guy who had the Davemade design info he didnt

need him any longer so Dan left and started another amp to compete with xforce but that didnt last long... To my knowledge the guy dave doesnt sell

his amps any longer since he got screwed over buy Dan and another hack has

picked up the name and is selling them. But there you have it in a nutshell

Xforce Owner is
Carl Curratola
630 Bolles Ave
West Chicago Illinois

FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS

The FCC has issued a friendly reminder about those HF transceivers ostensibly marketed for "amateur" use, but actually designed and intended specifically for the so-called "freeband" radio operators, who operate primarily in the 26 to 28 MHz frequency range.

In a May 13 Public Notice, the FCC points out that it's a violation of FCC regulations to import or market a transmitter designed or intended to operate outside the amateur bands unless the equipment has been issued a grant of equipment authorization for the radio services it's capable of operating. The FCC says it wanted to clarify its rules on equipment that's "intended to operate in various radio services in the high frequency radio spectrum, including '10-meter' Amateur Radio Service (ARS) equipment." The notice--directed to "manufacturers, importers, vendors and users of these transceivers"--emphasizes that transmitters intended for use by FCC-authorized radio services except the Amateur Radio Service must be type-accepted.

In the words of the Public Notice: "The Commission considers that the transceivers discussed above are intended to be operated on frequencies where the use of type-accepted equipment is required, because of the simplicity of modifying them to extend their operating frequency range."

The FCC also noted that it's illegal to import, market or operate a transmitter that requires a grant of equipment authorization but for which no grant has been issued, and that it's a violation to transmit on frequencies allocated to a licensed radio service "without the appropriate Commission-issued station license." Violators could be subject to fines or imprisonment as well as equipment seizure and forfeiture.--FCC

>Could be this poor sick bastard is so damn bored!

Guess the FCC must have been "poor sick bored bastards" when they wrote this,
huh Ice? You should call them and tell them you think their rules are "trivial"!

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture, sell
or
lease, offer for sale or lease (including advertising for sale or lease),
or
import, ship, or distribute for the purpose of selling or leasing or offering
for sale or lease, any external radio frequency amplifier or amplifier kit
capable of operation on any frequency or frequencies between 24 and 35 MHz.

This is probably due to the relays themselves. The smaller relay used in the driver is normally small and has a low mass on the movable portion. The higher power section probably has a much larger relay to aacomodate the higher currents and is inherently slower mechanically...

(copy of letter to your ISP)

I am bringing to your attention the following post from the newsgroup rec.radio.cb

This post involves the illegal activity, as per Part 2.581 of Title 47 of the US Code of Federal Regulations, of advertising for sale a radio frequency amplifier capable of operation between 24 and 35 Megahertz. This is an offence that is punishable by fines, imprisonment, or both.

Free and open trade of this type of illegal equipment encourages others to do the same, and detracts from the criminal nature of such activities. It also deceives the public to believe that such activity is legal and/or acceptable behavior.

Illegal operation of radio transmitters and amplifiers causes interference to radio and television broadcast stations, and disrupts radio communications for emergency services and other licensed users. This type of "RF thievery" is analogous to an internet hacker that can "steal" an IP address, disrupting the peaceful and legal operation of the internet service provider that has legal right to that IP address.

I am confident that you will take any action that you feel is appropriate. Thank you.

Sincerely,

Aaron H. Voobner

The average person has no idea of the vast range of things the FCC must concern themselves with...Especially in the computer/mobile telephone age...Primative things like CB radios are so far down their list of importance it`s a joke to worry about it..The only time you hear of the FCC busting someone in this area is in response to repeated citizen complaints

The internet is more than a global pornography network

And what, precisely, are my purposes, sparkly? Are you a mind reader
now, as well as a troll?

I made a comment, and now you're making an ass out of yourself with your
assumption that I advocate freebanding and running power. I've said it
before (and it hasn't sunk into your thick skull yet), and I'll say it
again: I DO NOT ADVOCATE FREEBANDING OR RUNNING AMPLIFIERS ON CB.

>
> Speaking of example-setting, name-calling, and mud-slinging, I need to
> ask: didn't -your- mother ever teach -you- to think for yourself?

Sparkly, I am thinking for myself. I've not been brainwashed into
thinking that a Rule (and it is a Rule, as stated IN the FCC Rules) is a
Law. An Act was passed which brought the FCC into being, and gave that
commission the authority to Regulate (NOT pass Laws concerning) the
airwaves. They can make Rules, but the FCC themselves cannot pass a Law.
Only Congress and the President combined can do that.

I guess that's why the FCC calls them "Rules" and now "Laws"

The fact that the two words are synonyms means about a can of fecal
matter... If you look up the definition of synonym, you'll see that it
means (and I *AM* paraphrasing here) "words that have ALMOST the same
meaning". They're not exactly the same.

Now, I suggest you reach down between your legs, grab ahold of your
shoulders, pull REALLY hard and stop with the recto-cranial inversion
already.

A 102" whip & spring on a ball mount OR maybe if you won't hit anything I have a mount if he wants to drill out the almost 1/2" hole on the rear right of the unit where that hole is--I have a mount and angle piece for it for an antenna there, but it won't be as rugged as the ball mount. Forget the Magnet mount on Jeeps, too.
Dave!!!!!!!!!!!!!

If he is using it off road, I would suggest a moe permenant mount than a mag mount, I would venture to say that if he is using a classic (cj-5) that he could mount it right to the roll bar, if using a cherokee type he could drill a hole in the roof and using some large washers to stabalize the metal, to use a stud type mount. In our area there is a large mud boggers club, I have seen their mag mounts get bounced off or knocked off by low hanging branches. best bet is a perm mount with a good spring between the actual arial and the stud/mount.

>Law.
<snip>

I suggested that you could ask the FCC yourself. I also quoted a
dictionary which provided not only each word's definition, but also
how each word is different. This is not a brainwashing thing, it' just
basic common sense.

So instead of frothing at the mouth from constantly repeating
yourself, why don't you quote something that says the FCC rules are
not laws. But it would have to be more credible than Webster's
dictionary, which isn't going to be easy. In the meantime, I will
contact the FCC myself and get their take, and then, if I get really
bored, reference a couple legal textbooks that explain all about law.

You got your homework, I have mine. Have fun.

Interference with TV and radio broadcasts are not trivial, and neither
is interference with emergency communications. Add to that the
intrusions into the ham bands, the interference into non-radio
equipment, and the harmonic splatter effects that we don't even
recognize yet but the FCC does, then it becomes a big problem. I guess
that's why we have such strict CB laws.

I could ask the same of you...

Quote something that specifically and implicitly states that the FCC Rules (even in the Rules they're called Rules) are Laws.

Until you show me where it's stated as a LAW, they will remain, in my mind, Rules, as stated in the FCC part 97 Rules, part 95 Rules, etc... Rules..

Oh, and don't pretend you weren't thinking "kilowatt running freebander"... That was your implication, I'm sure, when you were speaking of my purported purposes.

Can the FCC Rules be enforced? Yes.
By the Police? Perhaps. That all depends on the judge's interpretation of the Rules.
Does this make them Laws? No.

God must have made Adam and Eve clothed from the get-go, then, eh?

Seems to me I remember a "Far Side" comic with two nude people standing
in a store window, and on the window was painted, "Fashions by God"....

Something to think about.

You are starting to sound like CLP with his 'show me this' and 'show
me that' attitude. Well, that's too bad because you (and he) need to
start doing things right by backing up your claims instead of begging
for anyone to disprove them. I have already provided much more support
for my argument than you have. In fact, you have provided none. You
are the one with the dissenting opinion. You made the claim. You said
the FCC rules are not laws. Back it up.

>Oh, and don't pretend you weren't thinking "kilowatt running

I'm tired of this.

From Article 6 of the US Constitution;

>This Constitution, and the laws of the United States which shall be
>made in pursuance thereof; and all treaties made, or which shall be
>made, under the authority of the United States, shall be the supreme
>law of the land; and the judges in every state shall be bound thereby,
>anything in the Constitution or laws of any State to the contrary
>notwithstanding.

The laws of the US that have been made pursuant to the US Constitution
are collectively called the US Code. This is the "supreme law of the
land". The Communications Act, a legislative ACT OF CONGRESS, SIGNED
INTO LAW by the President, pursuant to the U.S. CONSTITUTION, is now
Title 47 of the US Code.

Was that simple enough for you to understand?

I should add to this...

The unit will recieve fine. (the recieve boost works also) the amp
just doesn't key out power.

To abuse@webtv.net,

I am bringing to your attention the following posts (below) from the newsgroup rec.radio.cb. The first is the most recent. I include two others for reference.

This post involves the illegal activity, as per Part 2.815 of Title 47 of the US Code of Federal Regulations, of advertising for sale a radio frequency amplifier capable of operation between 24 and 35 Megahertz. This is an offence that is punishable by fines, imprisonment, or both.

Free and open trade of this type of illegal equipment encourages others to do the same, and detracts from the criminal nature of such activities. It also deceives the public to believe that such activity is legal and/or acceptable behavior.

Illegal operation of radio transmitters and amplifiers causes interference to radio and television broadcast stations, and disrupts radio communications for emergency services and other licensed users. This type of "RF thievery" is analogous to an internet hacker that can "steal" an IP address, disrupting the peaceful and legal operation of the internet service provider that has legal right to that IP address.

I am confident that you will take any action that you feel is appropriate.

Thank you.

Sincerely,

Aaron H. Voobner

Just wondering... If I attached a wire to the end of the feedhorn, (
of a 12ft wide C-BAND satellite dis) then run
the wire to my existing CB radio Antenna.. will i be able to hear
voices
from far away?

or...

CanI use the big dish as some type of high performace antenna? I want
to buy one this cool radios that picks up internationals radios
stations,but want to boost the signal as much possible. Lastly..

Ha anyone used the Bigh dish as a high performance antenna hooked up
to to a CB ??? Walki-Talkie??

Just asking.

You got it right Jay. We are just a bunch of nerds with no life. We are not out drinking, driving fast cars, and rock and rolling every night. Therefore we have hundreds of hours weekly - virtually all the time in the world - to send notes to ISP's, cancel eBay auctions of illegal gear, send notes to the FCC, and concentrate on new ways to point out how illegal cb ruins the band for others. And best of all we are totally immune to name calling, threats, and taunts. We are your worst nightmare.

Hello Frank: Well that's you opinion, and you have left out a bunch of things. But I'll add them in here for you.

I have never seen Train:

1) Forage postings
2) Rant and rave over small insignificant things
3) Call people he didn't like sexual things that one should only say nose to nose. Not behind the keyboard.
4) Accuse people of things they didn't know about
5) Continuously use a false e-maill address
6) Bend and twist the truth, for his opinions
7) Amps, the only guys who talk about about is you
8) At times "less than civil language" as compared to the porno I have seen here is a Nat's fart in a Hurricane.

Ah yes the best one here "Get some perspective"

Train is a really good guy. What you need to do is slide on over to one of the keydowns and introduce yourself and meet all the boys. Who knows you might even get to meet some fine people and learn a few things. Might even get lucky !!!!!

I have plenty of perspective, I suggest to you is, get a life. Its a real shame you spend so much time here. This weekend I delivered a custom 20 meter, 7 element beam, and a rebuilt old 5/8 antenna yesterday, and have many many more things to do today.

Have a nice day.

That's a real shame. You need to slide on over to the next keydown (I also recommended this to Frank) introduce your self and be all sociable, have a few beers, and some shooters, a little BBQ, and meet the folks there.

>We are not out drinking, driving fast cars, and rock and rolling every night.

That's more of a real shame! I got a friend "Big Bob" who hangs out on channel 12 who is selling a mint (no bullet holes) 1964 Buick Skylark, that has been made into a convertible, has duel 102 stainless steel whip antennas on the back fenders, Cop spot light, for shotin rabbits at night, has extra gas tanks so's ya's can gas up and hall ass to Vagas, and if you lose all your money you have gas to make home and tell Ma ya was robbed!

> ruins the band for others.

I think your pissin in the wind, but if you like wet shoes have at it.

I would hope you never get all wrapped around the axle about ng spellin, cars going over 65 MPH, folks spitting on the side walk, Jay walkin, and other folks usin the dryers at the laundry mat when there's a few more minutes left in them from someone else.

> And best of all we are totally immune to name calling, threats, and taunts.

That's a mature thing.

> We are your worst nightmare.

No No No. My worst nightmare is dreamin of gettin back and married to the X, but then I wake up in a cold sweat, and see that's she not next to me in bed. I have a wonderful day then.

My map shows the house numbering ranging from 28529 to 29276. Perhaps the number is 28630, but it isn't just 630. I'm not defending the guy, just noting an apparent in the information.

To answer the question about the vehicle, it's a Cherokee. I'd rather not drill any holes in the body, I have a safari rack on top and my thought was to clamp the antenna to that. WebDoc's comments about magnetic mounts are right, too easy to get knocked off.

Will an external antenna with a BNC to SO239 adapter work OK?

Thanks,
Bob Chmara

Could it be because when issued an NAL you ARE entitled to a hearing and are not just required to "send in the money or they come and take you away". Last time I looked, we were still in a country where due process is still the law of the land. Much like the IRS however, the FCC has taken the opinion that the NAL they issue is the final word and there is nothing you can do about it. Funny that when you go to appeal an NAL it must be appealed to the GOVERNMENT AGENCY that issued it and not directly to the court system. The fine levied against ExportsRus is being appealed.

1790. Re: Three illegal Davemade amps reported to ISP!

Newsgroup: rec.radio.cb
Date: 2001-06-17 14:26:44 UTC
From: Sideband <sideband@spam.me.not>
Message-ID: <3B2CBE24.A01A141D@spam.me.not>
Source record: 85828

You've shown no proof that the FCC Rules are anything other than Rules. Cite the bill number and year that these purported laws were passed by Congress and handed up to the President for his signature/veto. You can't, because they weren't. The Federal Communications Act was an Act of Congress, which does not require presidential approval, and, therefore, cannot be called a Law in the traditional sense.

Remember the Saturday morning cartoons, about how a law comes to be? Yeah... the ones made by the same people who made that "conjunction junction, what's your function" cartoon... Didn't you pay attention to those? What about Civics class?

More below.

Frank Gilliland wrote:

I don't know who CLP is, but the fact remains that your stubborn refusal to back up your case has degraded this entire discussion to the point of ridicule. I've decided to take this slowly, step by step, in the hope that your brainwashed closed mind might possibly soak in viewpoints other than those of the ones who brainwashed you. "Because I said so" is

not basis of proof for a point in an argument, debate, or discussion.

You said the FCC rules are Laws. Back it up. Show us anywhere, on the web, at the library, anywhere, where this Congressional Act called the Federal Communications Act was proposed to the House and Senate as a Bill, and then passed up to the President to be signed into Law. Show us that the FCA is anything more than a Congressional act.

>

Maybe this is pointless. Your mind is closed to opinions other than your own. I can't convince you of the truth, so you go on thinking this way.... Keep helping Dave or Debbie's pinko chinese commie SOB's degrade this country into nothingness...

I for one will continue to support the FCA and the FCC Rules as they are... Rules, to be enforced by the FCC.

Correction:

Operation of radio transmitters not type accepted for the 11 meter CB
band on the 11 meter CB band MIGHT cause interference to radio and
television broadcast stations, and MIGHT disrupt radio communications
for emergency services and other licensed users.

It is possible to run a clean station... Just because a radio isn't type
accepted for the CB band does not automatically mean it's going to cause
interference when used on the CB band.

Train How wrong you are my Fine Feathered, again Wishful thinking doesnt mean
it is So. LOL. Read Carefully
-=-
Further, nothing in the Communications Act requires the Commission to provide
an unlicensed operator the opportunity for an evidentiary hearing or an
opportunity to correct a violation prior to imposition of a forfeiture.

F.) Finally, we reject Mr. Holcombe's argument that he has been denied a fair
hearing of the facts and the right to due process. Mr. Holcombe is not entitled
to a hearing as a matter of right because Section 503(b)(3)(A) of the Act, 47
U.S.C. ï¿½ 503(b)(3)(A), explicitly states that such hearings may be held ``[a]t
the discretion of the Commission.'' (emphasis added). In lieu of holding a
hearing, the Commission may proceed as it did in the instant case, using the
NAL procedures set forth in Section 503(b)(4) of the Act, 47 U.S.C. ï¿½
503(b)(4). See also 47 C.F.R. ï¿½ 1.80(e). These procedures do not deprive Mr.
Holcombe of his right to due process because any forfeiture issued in
accordance with these procedures is ultimately subject to a trial de novo in
federal district court pursuant to Section 504(a) of the Act, 47 U.S.C. ï¿½
504(a), should Mr. Holcombe not pay prior to such time.

-=-=-=-=========-=-=-=-=-=-=-=-=-=-=-
(f) . The Commission did not abridge Mr. Martin's right to procedural Due
Process by failing to provide opportunities for an evidentiary hearing and for
correction of the violations prior to the imposition of the forfeiture.
Sections 503 and 504 of the Communications Act provide safeguards which satisfy
Due Process requirements.8 See Stephen Paul Dunifer, 11 FCC Rcd 718, 729
(1995).

Why is that over 10 million people use aol, Now if you said that about web-tv I might believe you. He is correct a Ranger 2950 is illegal to use on 11 meters, it is a 10 meter only radio. you can use it but you risk being fined if caught. Of course if you havent fired up the amp with the browning you are ok, soon as you key the mike. Bam Illegal.

That's good, and you really shouldn't try to understand anything more complicated than that.

Friggin' delta....

Did they move to Villa Park? It is only a 15 minute drive from the Bolles Ave location.

Nice to see the Anti group has toned down their tactics a bit. I knew they could do it. They are actually trying to convey their messages in a civil tone. The flooding/spamming has ceased, along with the pornography. To him/them, I say thank you. Shame it had to come to something analogous to bashing their heads into rocks to accomplish this though. Good ISPs are hard to find these days.

To everyone out there, no matter which side of the legal/illegal issue you reside on, we are all human, and on that note.....Happy Father's Day!

Randy

Frankie:

How can someone prove something does not exist? They cannot.

How can someone prove something does exist? By showing that it exists...

Lack of proof of the existance of something does not mean it does not exist.

Therefore, if you say the FCC Rules are Laws, then the Bill that was passed into Law must exist. Therefore, since it is impossible to prove that something does not exist (that it is not a law), the burden of proof must be on you to prove that it does exist (that the Rules are in fact Laws).

Whether or not the Rules are Rules or Laws, it does not change their ability to be enforced by the FCC or other enforcement agencies empowered by the FCC to do such enforcement.

My point in all this, and thank you for proving it for me so eloquently, is that whiny, sniveling, trollish, microphone lawyers will sit here and debate the fine points of a useless argument ad nauseum to the detriment of this newsgroup. It is counterproductive to debate such things, as it matters not whether the rules are rules or laws; they are still enforceable. You are too easily baited into this silliness. You are also incorrect, but that's neither here nor there...

1805. Re: FCC Rules, You cannot advertise for Sale amplifiers

Newsgroup: rec.radio.cb
Date: 2001-06-17 16:02:05 UTC
From: tek_guy@hotmail.com
Message-ID: <cbf4a67d.0106170802.503810af@posting.google.com>
Source record: 85843

That can't be the whole law. I know it isn't.

If you bothered to look at the whole law, AntiKeyClown whoever-the-hell-you-are, you'd notice that the maximum power limit for ham radio operators on the 10 meter band (which falls into the 24-35 mHz gap, if I remember correctly) is 200 watts for Tech Plus ops and the maximum legal power limit (1500 watts) for everyone else authorized for the band. Correct me if I'm wrong.

Are there manufacturers that make rigs that can go that high without an external amplifier? OK, Yaesu makes a couple rigs (FT-1000MKV comes to mind) that can do 200 watts, but that's $4000. I don't think you'll see one of those advertised here anytime soon.

Still, that's nowhere close to the 1.5 kW legal limit.

FYI - I do agree with your original statement - CB amplifiers are illegal. They are. Personally, I really don't see why you'd want to spend the money. The CB band is full of profanity, inconsiderate operators, QRM, people running jerry-rigged crap that can't put out a good signal, etc. Get a ham license.

Prozac:

Take some, then read the whole post... I specifically and implicitly
stated that the FCC Rules ARE enforceable by the FCC.

I've also stated before that I don't condone freebanding, running
illegal power, or running non-type-accepted equipment. If you wish to do
so, you do so at your own risk..

Read further.. and then go back to English class; you need to relearn
your punctuation and capitalization rules.

AOL is not raising the rate to 23.95 a month.....SUCKERS!
By their reading of the"rules" simple possession would be grounds to be
fined......watch out......the radio police will be knocking on your door any
day now........Right about the time I actually get an NAL.
HAHAHAHAHA
This shit is too funny to not comment on!

No one said it was the whole law, but what does the max power output have to do with selling an amp for 11 meter use, we will correct as needed. We are still trying to figure out what this thread has to do with radios doing 200 watts ? The legal limit of 1500 is for ham bands not cb and your point is?

97.313 Transmitter power standards.

(a) An amateur station must use the minimum transmitter power necessary to carry out the desired communications.

(b) No station may transmit with a transmitter power exceeding 1.5 kW PEP.

(c) No station may transmit with a transmitter power exceeding 200 W PEP on:

(1) The 3.675-3.725 MHz, 7.10-7.15 MHz, 10.10-10.15 MHz and 21.1-21.2 MHz segments;

(2) The 28.1-28.5 MHz segment when the control operator is a Novice Class operator or a Technician Class operator who has received credit for proficiency in telegraphy in accordance with the international requirements; or

Your English needs work.
Re: FCC Rules, You cannot advertise for Sale amplifiers

You would do better saying:
Re: FCC Rules, You cannot advertise to sell amplifiers

Even your spell check and grammar check should pick up on that little ditty.
You might want to run everything you post through MS Word from now on or we
may have to report you to your ISP for abuse.....Of the English language!

How is it that a question is deemed to be off topic only due to the fact that the subject has to do with things that are outside the "law" as far as CB radio goes? CB radio is CB radio and that is all there is to it.I'm actually surprised that these "ANTI" assholes haven't tried to get web hosts to disallow anything on their servers that may have anything to do with CB radio that "THEY" see as unfit. When you said you were writing down to my level, you insulted me. That fallacy is shown by your lack of punctuation.

You would have to go back to school and graduate college to write at my reading level.

As for my "insult" to you, I was simply reiterating the steps I needed to go through in order to make sense of your ramblings... If the facts insult you, so be it.

At any rate, this is off the subject, and just further proved my point.

X-Force products are proving to be great products. They will have a new anodized case that will be very attractive, as the attractive power output. We have had several ship out and recieved with total satisfation from the product to the customer. We would like to thank all that emailed and have purchased this product also.

Thanks, Steve

We have such "strict" CB "laws" because we have been taken over and now are in a communist country (Carl Marx's plank #6, established in USA in 1933). The only time that the candy man gets concerned is if it affects $$$$$$$$$$$ (Bizness), and the beloved toilet band on 52-890 mc! How much has CB "interfered" with Emergency communications? Maybe in da HOOD, when the BIG BOYZ runs dem BIG watts, can CB splatter into the UHF pole-leece band? I doubt it. Interfering with the TV freqs. is our American DUTY to squelch out communist propaganda put out by these immoral reprobates in Hollywood! I LOVE TVI, not Lucy, will be the title to the new hymm I will compose! Too bad TVI just messes up Channels 2 & 5. I wish it messed up all audio freqs. in Ch. 2 to 83 or 70, whichever is the highest TV channel now!!! Fight communism with your CB! Make TVI today!!!!!! Don't cry to bad, N8 Circus! We will only jam da TV band, not yo Hambo bands!!!!!! 'Cause we is Americans, and the 4th is not far away!!!!!! We is on CB 'cause we is still FREE!!!!!!!!!!!!!
Dave!!!!!!!!!!!!!!

Interference with TV and radio broadcasts are not trivial, and neither is interference with emergency communications. Add to that the intrusions into the ham bands, the interference into non-radio equipment, and the harmonic splatter effects that we don't even recognize yet but the FCC does, then it becomes a big problem. I guess that's why we have such strict CB laws.

Sideband Perhaps you should reread you own posts below where you condone freebanding and the use of illegal power. Prozac, called a spade a spade, I think he is right On!.

>

Provided the CB'er doing this isn't interfering with HAM operators, emergency frequencies, or anything of the sort, and that the CB'er isn't bleeding over onto commercial, emergency, and HAM bands, I feel it's perfectly acceptable.

>
> 2. Running power on the CB band, provided the system is "clean," meaning

A, B, and C are OK, again, provided care is taken not to bleed over and interfere with other stations, commercial stations, and emergency stations

>
> D. under 1000 watts.

>

Here's the "grey area" with me.

>
> E. over 1000 watts.
>

Just rediculous... If you can't do it with 50 watts, you should take a serious look at your antenna system, and think about finding a way to make a better RF radiator. Power isn't the answer to every "get out and touch someone" problem.

Just my two cents.

Sideband,
I think your making two assumptions that are not true,
or very realistic.
1.Freebanding: The so-called 'freeband' frequencies are
already allocated. I know of several services that have
frequency allocations both above and below the regular
40 channels. They certainly don't account for all the
frequencies between CB and the next higher/lower commonly
recognized bands, but I certainly don't know all of the
services in those areas either.

2.Running Power: In the 'real world' very few of the 'CB'
amplifiers are 'clean'. There are all kinds of reasons,
from basic design, to the manner in which they are installed
and used. In most cases, the end-user is the biggest
problem, they just don't know enough to do it 'right'. (NOT
just CB'ers, but ANY end-user)

Those are just two reasons, I'm sure there are others. Like
it or not, CB'ers are still a part of society and have to conform
to society's rules, or face the consequences. If you want to
change the rules, then do so! But, do it 'right', other wise it's
like beating your head against a brick wall. You can do that if
your want to, but don't complain about the head-ache!

Hey Sideband, what part of this post didn't you understand? Can't you find a copy of the US Constitution on the net? Or the CFR? How about the original Communications Act of 1934? Or the Radio Act of 1927? The Telecommunications Act of 1996? Is there a site that says FCC rules are not laws? How about just a simple legal glossary? What part of this post didn't you understand? Do you need someone to operate a search engine for you? Do you need to have someone bring the original documents to your door and hold your hand while they are read to you?

Jeez, man, quit repeating like a cucumber and start thinking. All it takes is some simple qualitative reasoning skills.

Hello.....Hope everyones cb is working well today.
Funny....I don't hear any whining, pissing or complaining from Train.
He is in the same position as the rest of us in the business. He is sick
and tired of all this "anti" bullshit from the self appointed enforcers
of Part 95. It's hard to sit back and keep your mouth shut sometimes.
Train has simply blown his cork because the bullshit factor has
completely overwhelmed him. I must agree. However, I must refrain
from comment, and as bad as I would like to, I must keep my mouth
shut since someone who was supposed to be a friend leaked my true
identity some months ago, and a certain pompus asshole in the NG
cause me more than my share of problems. So.....more power to Train
and all others who do anything to piss off those who truly care about
out of band operators, amps, export equipment, mods and the sort.
A big hearty "Fuck You" to all the other dickheads who claim to care
but are really just a bunch of childish morons who stir the pot using
dozens of aliases posting and responding to their own posts.

Hey aren't you the Guy in Chambersburg Pa?
I guess you don't hear any whining your head is so far up his ass. How do
you expect to even hear your CB Radio?.

So, since I am a licensed amateur radio operator I can build a radio or amp and use or sell it as I see fit as long as it doesn't transmit on 11m. Is this correct?

hey train man,
you gonna get up here an call somebody some
UNKNOWING TWITS. you might wanna reevaluate yourself if your gonna take a
good uniden grant xl and start turning a bunch of cans and pots.that radio
is the best pre-tuned radio that uniden sells. it only requires turning up
vr12 or removing r131. and it will swing about 15 watts you can spend all
the time you want removing or adding caps, changing out a good final only to
put in the same thing and for what , a watt maybe. i run my grant mic gain
wide open and run a d-104 m6b on #5 setting and it's top shelf. i don't use
a train built amp because i hear there overrated and have a inflated price.
texas star from leftcoast radio is the way to go. "COME GET SOME "

1855. Re: FCC Rules, You cannot advertise for Sale amplifiers

FYI - I do agree with your original statement - CB amplifiers are illegal. They are. Personally, I really don't see why you'd want to spend the money. The CB band is full of profanity, inconsiderate operators, QRM, people running jerry-rigged crap that can't put out a good signal, etc. Get a ham license.

I have a higher license than you. The HAM bands are full of profanity, inconsiderate operators, QRM, and especially people running jerry-rigged crap that can't put out a good signal, etc.

Go bash some amateur radio operators.

I had all my work caught up for the day, so I decided to stop and visit my daughter for a while (she lives with her mother in another town nearby) since there was nothing to do and I had to be available till 5, so I figured what the heck.

The place looked deserted but I knocked anyway and after a moment or two my daughter answered the door. She asked me in and we chatted a while and she told me to wait a minute and she would have her friend "Trisha" come downstairs to meet me. "No big deal" I thought at the time. Boy was I wrong. Down comes this hot little honey about 14 or 15 years old, with the most incredible body and a very pretty. I couldn't help myself but to check her out whenever she wasn't looking. After some conversation, I excused myself and told my daughter I had to get back to work and left.

I couldn't get this little Trisha babe off my mind for days though, and thought to myself I would offer to take her and my daughter swimming just to get a look at that little bod in a bikini. Well, things didn't exactly
work out like I had planned, but even better. I was out for a motorcycle ride one night when I ran across Trisha at a softball game I stopped to watch. She came over to me after the game and said "do you remember me"? Oh yea...I remember you. Whats up? Not much she replied. "Kim didn't tell me you had a bike" she says. How about taking me for a ride. "What about your mother?" I say. She couldn't care less what I do the young girl says. She's out gettting laid! I about fell over at this statement. I guess I totally lost my mind because I told her to get on and we'd go for a ride.
After cruising around for a while we were near a cabin I own, and I had to piss really pad, so I pulled in to take a leak. When we got off the bike, I said "I'll be right back Trisha, I have to pee" and went around the back of the cabin to do my thing. As I was standing there draining the lizard, Trisha hollers back "why did you go back there, were you afraid I was going to see your cock or something?"
"Well as a matter of fact, yes I replied". As I came back around

the corner she giggled and said "Too bad I couldn't have seen it, I hear you have a hell of a cock". I couldn't believe what I was hearing. I asked "how do you know that?" and she replied that my daughter had told her that her mother said one time that the only thing she missed about me was I had the biggest cock she ever had seen, and sex with the new husband just wasn't the same.

I was pretty much speechless and didn't say anything for a minute. "Cat got your tongue?" she says. "Kinda" I reply. "How about you show it to me?" she says. I felt my cock start to harden right away. I just couldn't resist the idea and so I told her I would let her take a look if she swore to tell nobody. "If you show me your cock, I'll let you look at my pussy" she says. That did the trick right there. I went over and leaned against the picnic table and unzipped my pants and slowly pulled it out. Trisha's eyes just sparkled. "Can I touch it?" she says. "Sure" just be gentle. When the little vixen wrapped her hand around it, it instantly hardened up to it's full ten and a half inches. "Oh my god!" she says. I have never seen a cock like this. "Oh, like you have seen that many" I reply. Just because I am only fifteen doesn't mean I have never seen any cocks Trisha replied. I guess you think I have never been fucked either? I could hardly believe my ears.

What happened next was what put me over the edge. "How about taking me inside and I'll give you incredible head and then fuck your brains out?" she says. Well, she didn't have to ask me twice. I almost ripped the door off to get inside. Once inside the little bitch took her clothes off and was on the bed stark naked before I was halfway undressed. "Do you know I am forty years old?" I asked? "Who gives a fuck, I want that cock" she says. Music to my ears. "Well first little lady I am gonna eat your pussy" I tell her. I went to giving her a tongue lashing like crazy. The more I ate her, the crazier she went and the harder my cock got. I finally stopped because she was just gushing and I was damn near drowning in her fluids. "Come up here before you drown" she says. I obliged, and she traded places with me and popped the head of my cock into her mouth and started sucking. She tried her best to get as much as she could into her little mouth, but only got a little more than half at best. Still it was enough to do the job. I came in hardly no time. She swallowed every damn drop just like she'd been doing it forever. I told her "Hurry up and get on top of that thing before it goes down". She eagerly got up on it and it slipped into her tight little hole with ease. I told her to put as much in as she could stand and I would be real careful, because I didn't want to hurt this little beauty. I just layed there and enjoyed the expression on her face as she took more and more into her hot little box. I couldn't believe it when she finally working the whole thing into her. She almost had tears in her eyes when she said "I knew I could do it, it's all in me". That's when I lost the second load into her tight little box.

Get on your back I demanded. I proceeded to rod the little bitch
out like she was a grown woman. All the while I hammered at
her I watched her beautiful 36C titties bounce up and down.
I fucked her til we both came in one beautiful climax. Afterward
we got cleaned up, jumped the bike and headed home. "What
the hell did I just do?" I think to myself. Oh well....too late now.
When we got back and I dropped her off she said exactly what
I was going to say...."Don't say a word to your daughter" she
says. This will be our little secret. "No problem" I reply.
Oh yea, by the way....When are we going to fuck again she
says.............

Good work RecRadioCBPolice, however the posting of the entire story here will be

criticized by the illegal keyclowns as "posting porn". Should have run the first few sentences and a link to the rest.

That's OK, you are new on the force. Next time you'll know. And there will be a next time. These keyclowns ALWAYS have skeletons in their closets.

That snippet is taken out of context. It was posed as a set of questions
to try to get to the bottom of why the spammers, etc, had all of a
sudden started filling the newsgroups with rants, raves, cussing,
etc....

I stated my opinion on the subject, not to condone it, but instead to
try to test the waters for a potential proposal to the FCC about opening
up a small SSB only band limited to 50 watts between 27.405 and 27.805.
I was met with underwhelming response, so I dropped the whole matter.

It was NOT intended to condone freebanding or running power.

RRCBP:

Here, Doc surmised the purpose for my original post (with the questions), and responded quite intelligently to it. I agreed with everything he said here, to include doing it "the right way" (which I took to mean making the proposal, showing support for it, waiting for it to be added to the FCC Rules, etc).

I drive a truck on a four hour route every night by choice, not by
necessity. The reasons for that are personal, and are far beyond the
scope of this newsgroup. I also run a computer networking and systems
consulting business, which accounts for the vast majority of my income.
You, of course, seem to have trouble with someone being able to do more
than one thing, and do them both well.

And what do you expect to gain by reporting everyone and hiding behind faked email addresses and making this NG an unpleasant place to discuss topics and proclaiming yourself the frequency police and and and.....I could go on. The FCC wouldn't let you become an agent so you decided to find an NG and start harassing people. Can you actually recall from memory the FCC rule book or do you have it in front of you? Do you even know how a radio works? Are you a ham operator that's jealous that a bunch of people with CB radios know more than you?

>-SSB

Sideband, perhaps the biggest flaw in your proposal was the question of how you might compel hundreds of thousands of CBers who have historically flaunted and ignored all CB rules - to all of a sudden respect "new expanded cb" rules which limit them to 50 watts on 27.405 - 27.805.

Also IMHO freebanders don't want the freeband legalized. It would mean an influx

of yahoos from the lower 40 that they would then have to escape - by moving to newer illegal frequencies.

In the 28.1-28.3 cw segment, everybody is limited to 200 as they are in all Novice bands and the 10.1-10.15 band on hf. This was because at the time, 200 watt rigs were more plentiful than they are now. I can't see running more than a barefoot rig anytime on 10 meters.

He is taking a section from the regs outside of both part 95 and 97. There is more to the story, yes, but it basically does not change his argument.

You are limited to one amp per year of a given design capable of 24-35 MHz
operation. So far as I know you do not have to be licensed for the band. A
codeless tech can build a 10 meter amp?

The idea is to prevent production runs so presumably you have to change some major component. One is grounded grid (which presumably would take over 50 watts in most cases), the next is grid input, the next is transistorized, the fourth uses FET modules, etc. They can be multi-band. If they can't do 10-12 meters presumably they don't count. The band is not the limit; if you can come up with 106 descrete designs, you can build 106 10 meter amps.

Get crackin'

Hello Gary:

I wouldn't go any bigger that a 4 pill amp. You need to have some head room left or reserve. The 4 pill will take as much as 70 to 80 amps and even more if you drive it hard.

You need to keep in mind that when your driving at night in the rain, snow, mud, blood, and beer you will need the lights 20 amps, windshield wipers 10 amps, defroster/heater 5 to 10 amps, and to run the other stuff for the car 10 to 15 amps.

One good thing to keep an eye on is the voltage of the battery. I have a volt meter from Radio Shack, that measures 0 to 15 Volts DC. I place it on the dash so its easy to look at without taking my eye's off the road for to long. By keeping an eye on the volt meter will allow you to see how the cars electrical load and radio equipment is loading down the alternator.

I have the meter wired right at the battery terminals. Once I was hauling ass down into Los Angles, and saw that the volt meter indicated 11.5 volts, not 14.1 like its supposed to, I turned around and went home, come to find out the belts had stretched out so that the alternator was not turning fast enough. A brand new set of Good Year Belts and 4 minutes and I am on the road again, with the rock n roll turned loud, ...keeping an eye on the volt meter.

Saying to myself "I am a bitchen guy"

When your a Big Strap you know the part number of your alternator belts, carry a few spares, and carry the tools to change it quickly! Women find you attractive.

Jay in the Mojave

Did you have to look that answer up in 95.411? Or did you call one of your
friends and they told you what to type? You wouldn't even know the answer
to the question would you?

If I have a 120 Amp 12 Volt DC Alternator how big of an amplifier would I be
able to use?

We enjoy reading all the usual lame excuses for illegal CB you guys are coming up with! Many of them are extremely LAME and FUNNY so keep posting them!!!!

******TOP TEN EXCUSES FOR ILLEGAL CB*******

10. I do it because everyone else does it.
9. The FCC don't care about CB - so why should I?
8. You can't prove I operate illegally!
7. FCC rules are not laws so I don't obey them.
6. I run illegal because legal is too restrictive.
5. FCC rules are trivial and not meant to be obeyed.
4. If lots of people disobey a law then that means its a bad law.
3. I take responsibility to pay the price if I get caught so that makes it OK.
2 There are different laws in foriegn countries.
1. The airwaves are free!

Would I be able to power an eight pill (8x2879's) or would I starve the box

and dim the lights? I would probably have to drive the 8 pill with a smaller 1x2290 driving 2x879's let's say. So both would put a serious drain on a 120 Amp 12 Volt Alternator. Should I stick with let's say two driving four or could I go bigger? What about 2x2290's driving 6x2879's?

Actually, with a poorly moded radio and "splashbox amp" they do hinder emergency communications, we had that happen here during a really bad accident when I was guiding in the Life-FLight chopper to take 2 of the victems to St. Vincents in Toledo, some of the boys from fulton county were running several kw and splashed all bands and rendered our comms useless and the chopper almost went into some power lines in the dark when it was being guided in to land in the field.

I know of a person in Napoleon who had a visit by a Lt. of the local Police Dept.
He visited "Undertaker" because his radio/amp was washing out the local PD freq's. I know this because I happened to be there visiting "Undertaker" at the time this occoured.

Yes I'll admit i once ran power for a brief period years ago. Now I do not, and have no desire to.

I have been out of CB and ham radio for 7 years now and have just recently been thinking of getting back in on my old hobby which started around 1977, so I decided to look for some newgroups in a related subject and much to my suprise look what I find CB radio on the computer....I figured and had hopes people would have somehow grown up over the last 7 years..But I see here all the whining and crying and just makes me remember how bad the cb and ham radio had gotten before I left.. I bet from what I have seen here my 1st day in this newsgroup that the airwaves are still polluted with cb rambos, crybabies, mikekeyers ect..How do I know this? hell just read some of the posts here...It is really sad...I do not condone running amps or modified cb equipment but at the same time who would I be to try to police these people? That would be like me following people around in my car and calling the police everytime someone went over the speed limit or did not come to a compleate stop at a stop sign. One fact does remain <good or bad>
Most ham radio operators started in cb radio then moved to export radio then became ham radio operators....you want to talk about breaking laws ect how many of you can actually say you have never chewed the rag with a station over 153 miles away??? You broke the "rules" when you did...no one violation is worse then the other here..amps, extra channels, noise makers ect <even the paper clip on the D104 counts> It is a sound broadcast for amusement... It is just so sad others can let others be...and enjoy what was once a good hobby for many!

You know it, I know it, but they don't give a shit! The holier than thou (don't take this personally Dave) are just here to stir up some trouble and see if they can really get to anyone. I think they have figured out that there are still a few of us out here that don't really care what they have to say no matter what laws they post. Fact is that there are two sides to radio and they think they can regulate the bad side on their own. These wankers should start by EXAMPLE and try cleaning up THEIR OWN HOUSE (READ AMATEUR BANDS) before they come on as the CB police.

Yes it will. Use an Ext. speaker too. The HOLE is there--just not quite 1/2" . Drill out bigger to 1/2" and I have mount and antennas for it.
Dave

"Bob Chmara" <bob@chmara-nospam.com> wrote in message news:9gi9n70sik@enews4.newsguy.com...
To answer the question about the vehicle, it's a Cherokee. I'd rather not drill any holes in the body, I have a safari rack on top and my thought was to clamp the antenna to that. WebDoc's comments about magnetic mounts are right, too easy to get knocked off.

Will an external antenna with a BNC to SO239 adapter work OK?

Thanks,
Bob Chmara

box
> and dim the lights?

Yes you will be able to power it but don't bother keying it up.....You WILL
starve it!

I would probably have to drive the 8 pill with a
> smaller 1x2290 driving 2x879's let's say.

Go with at least the 2X2879 as a driver for an 8 pill.

So both would put a serious drain
> on a 120 Amp 12 Volt Alternator. Should I stick with let's say two
driving
> four or could I go bigger?

Stick with the 2x4 until you upgrade the electrical system.

What about 2x2290's driving 6x2879's?

you will most likely end up about where you are now because of the power
constraints of the existing system.
Going to a 2X6 from a 2X4 isn't really a big enough jump to really make a
big difference on the other end. You will need to effectively double your
output to see a 3db gain or 1 S unit.
Hope this helps.

a truckers band on VHF somewhere would indeed be a step in the right direction... gotta have a CDL to buy the radio, etc... FM only.....
Would be nice...

But it makes too much sense.. the FCC will never allow that Rule to pass.

Nudity wasn't a sin before the fall, so why is it a sin after the fall?

It's not nudity that's the problem, or even pornography. The problem lies within humankind itself. Humans in this day and age (and in the country, too, sadly) seem to want less and less to take responsibility for their own actions, yet they want to place themselves first. It's deeper than this, of course, but nudity isn't a sin anymore than talking about nudity is.

How long until the truckers could buy their radios in the pawn shop?

I don't see truckers jumping to get on VHF any time soon. Unless the US government ran one of those russian made woodpecks on 11m in all 4 times zones for about 5 years - that would clean out the CB band for sure.

To AOL,

I am bringing to your attention the following post (below) from the newsgroup rec.radio.cb by cryptkeeper153@aol.com.

This post involves the illegal activity, as per Part 2.815 of Title 47 of the US Code of Federal Regulations, of advertising for sale a radio frequency amplifier capable of operation between 24 and 35 Megahertz. This is an offence that is punishable by fines, imprisonment, or both.

Free and open trade of this type of illegal equipment encourages others to do the same, and detracts from the criminal nature of such activities. It also deceives the public to believe that such activity is legal and/or acceptable behavior.

Illegal operation of radio transmitters and amplifiers causes interference to radio and television broadcast stations, and disrupts radio communications for emergency services and other licensed users. This type of "RF thievery" is analogous to an internet hacker that can "steal" an IP address, disrupting the peaceful and legal operation of the internet service provider that has legal right to that IP address.

I am confident that you will take any action that you feel is appropriate.

Thank you.

Sincerely,

Aaron H. Voobner

1945. Radio questions

Newsgroup: rec.radio.cb
Date: 2001-06-18 03:18:48 UTC
From: "Brian H." <stomp442@earthlink.net>
Message-ID: <3B2D7184.16F1F5F6@earthlink.net>
Source record: 86032

I posted this earlier but lost track of the post

I have a Cobra 25 LTD WX Classic hooked up in my van and it started blowing fuses out of know where and have no clue why its doing that. I hooked it up to my power supply in the house and it was doing the same thing. Does anyone know whats wrong and what parts i need to fix it?

I bought a couple of non working radios for practically nothing for practice radios to work on. One is a Cobra 29 ST that has been modded to have 40 up and 40 down. It has recieve but no transmit. I don't know if any power or modulation mods have been done to it though. Anyone know what the problem could be?

The other radio is a Sears RoadTalker. Its a smaller unit with a volume knob and squelch and a meter. It turns on but no recieve and no transmit. I've wired different mics to it and got the same result. Any suggestions?

Thanks in advance. I just want to see if doing stuff like this will fit me.

Brian

Message-ID: <MYeX6.32552$bK6.1972660@news0.telusplanet.net>
Source record: 86036

This NG is just the opposite of the 10 meter band. The place that the CBers have taken over and became the frequency police and caused interference to the legal operators that are and have earned the rite to be there. If you want the hams off this NG then get you and your "good buddies" off of 10 meters and the other ham bands that they seem to think that they own. The Chicken Banders started it but the hams will finish it.

What in the world makes you think that by dumping shit in here you losers are going to get people off 10 meters?
Hams are still pissed off that 11 meters was taken away from them and they can't stand it......40 years later. Wimpy hams with no balls and no guts to even show their true identity and have to hide behind forged IP's just shows all they are really after is to start some shit. I for one will not stand down to any little puke such as you EVER for ANY REASON! I've been here a long time and I'll be here long after you and your putrid vile loser asses are gone! I'm thinking it might just be time to fire up the Drake and start raising a little hell on the hambo bands just for shits and giggles. Some of us are just here to stay and there is not a damned thing CB Nazi douche bags like you will ever be able to do about it and you just can't stand that can you. Just keep thinking to yourself that the crap that goes on in the ham bands is just the reason that many like myself have gone back to CB as a hobby and left amateur service completely.My feeling it such that if you think you can tell me how to do something you better damn well be man enough to show me right to my face how you think it should be done but that would never happen with the pussy ham ops on the air today. There was a time that being a ham meant something to me but that was then and this is now. I would never think of getting my ticket back knowing the metal of the ops on the air now. You crybaby asshole sound like you feel cheated that they came out with a no code exam while you had to learn that crap and now it means nothing....NOTHING.......For that matter.....being a ham means NOTHING anymore. Got ahead and put your call on your car or as your e-mail......Most of us will look at it and now just say.............OVER AGED BAND FAG!
Time to pack for the Chicagoland trip.
I'm outtie.

Brian H. <stomp442@earthlink.net> wrote:
: I posted this earlier but lost track of the post

: I have a Cobra 25 LTD WX Classic hooked up in my van and it started
: blowing fuses out of know where and have no clue why its doing that. I
: hooked it up to my power supply in the house and it was doing the same
: thing. Does anyone know whats wrong and what parts i need to fix it?

It could be any number of things. You have not provided enough information.
I would start by checking the power supply.

: I bought a couple of non working radios for practically nothing for
: practice radios to work on. One is a Cobra 29 ST that has been modded
: to have 40 up and 40 down. It has recieve but no transmit. I don't
: know if any power or modulation mods have been done to it though.
: Anyone know what the problem could be?

It could be many things. The only way to get any idea would be to do
some testing on the radio itself.

: The other radio is a Sears RoadTalker. Its a smaller unit with a volume
: knob and squelch and a meter. It turns on but no recieve and no
: transmit. I've wired different mics to it and got the same result. Any
: suggestions?

Yes, trash it.

: Thanks in advance. I just want to see if doing stuff like this will fit
: me.

It won't, if you are unwilling to do some serious study of electronics. You
need to know how circuits work. You also need to know how to troubleshoot
problems.

>I am answering this only because I saw it in the copied text from the post
>replied to. CB is CB.....Legal or not.....LIKE IT OR NOT! This makes it
>an on topic post as far as I'm concerned.

Well that's your problem, Train. You don't know what CB means. Let's
review the rules:

Q: What are the Citizens Band Radio Services?

A: The Citizens Band (CB) Radio Service--a private, two-way, short-
distance voice communications service for personal or business
activities of the general public. The CB Radio Service may also be
used for voice paging.

Q:On what channels may I operate?

A: Your CB station may transmit only on the following channels
(frequencies):

1.....26.965 21.....27.215
2.....26.975 22.....27.225
3.....26.985 23.....27.255
4.....27.005 24.....27.235
5.....27.015 25.....27.245
6.....27.025 26.....27.265
7.....27.035 27.....27.275
8.....27.055 28.....27.285
9.....27.065 29.....27.295
10.....27.075 30.....27.305
11.....27.085 31.....27.315
12.....27.105 32.....27.325
13.....27.115 33.....27.335
14.....27.125 34.....27.345
15.....27.135 35.....27.355
16.....27.155 36.....27.365
17.....27.165 37.....27.375
18.....27.175 38.....27.385
19.....27.185 39.....27.395
20.....27.205 40.....27.405

Channel 9 may be used only for emergency communications or for
traveler assistance. You must share each channel with other users.

Q: How much power may I use?

A: Your CB station transmitter power output must not exceed the
following values under any conditions:
AM (A3)--4 watts (carrier power)
SSB--12 watts (peak envelope power)
Use of a transmitter which has carrier or peak envelope power in
excess of that authorized voids your authority to operate the station.

Q: May I use power amplifiers?

A: You may not attach power amplifiers (sometimes called linears or
linear amplifiers) to your certificated CB transmitter in any way.
There are no exceptions to this rule and use of a power amplifier
voids your authority to operate the station. The FCC will presume you
have used a linear or other external RF power amplifier if it is in
your possession or on your premises and there is other evidence that
you have operated your CB station with more power than allowed.

Q: What are the penalties for violating these rules?

A: If the FCC finds that you have willfully or repeatedly violated the
Communications Act or the FCC Rules, you may have to pay as much as
$10,000 for each violation, up to a total of $75,000. In addition, if
a Federal court finds that you have willfully and knowingly violated
any FCC Rule, you may be fined up to $500 for each day you committed
the violation, and if a Federal court finds that you have willfully
and knowingly violated any provision of the Communications Act, you
may be fined up to $10,000 or you may be imprisoned for one year, or
both.

So you see, Train, if it isn't legal, it isn't CB.

"What's the matter, can't compete, Lean? Why not go back in drag with your buddies in the hammie room and tell them all about how your call is bootlegged on 555 daily by fab frankie and the bay gang? I will tell you something about myself Lean since you are obviously of the intellectually challenged mindset. My

boat is 42 feet long and draws appproximately 10,000 gallons. I have an refrigerator, a stove, a freezer, a wastebasket and several matching pieces of furniture on it. Any time my buddies Train and Mopar or any of the so-called evil illegal keyclowns want to come spend the day drinking adult beverages and smoking contraband substances they are welcome to. But you Lean are not invited.

Do you want to know why? The drivel, Lean, the drivel. Your saucerlike eyes are widening now as you attempt to comprehend an obviously alien concept not taught in your computer college courses, I can tell. You think old Twist is about to leap off into the literate unknown, and you know, you may be right. But I have one thing on you. And that is fortitude. I will be a freebander until the day I expire and an author of some note, and there's nothing you or any short bus rider can do to take that away from me. My keyboard is clean and well dusted. My

icebox is cold. I have a telescope on the bow which I take bearings on Tampa Bay

at the full moons perihelion. All this can only mean you arre a LOSER Lean, a loser of the penulitimate and rigorous type, one who can only be pitied as I pity you"

Well gee, Gary, you can try. The only thing you will be accomplishing
is wasting your time and wearing out your keyboard. But if you really
think it will accomplish something, go right ahead. Just remember that
I never criticized you at all until you tossed your little bit of
flaming wisdom in my direction. Same thing with Jay and Train. But I
guess you have to defend all your buddies. So do whatever you feel you
need to do.

Then I will apologize for the sarcasm. But your definition of a "law"
seems to put much more emphasis on the canonical aspect, which is
inappropriate for US legal matters. I provided two definitions from
two different dictionaries. If you have a different definition, please
post it.

Hi !!

Does anyone have or know where i can get a repair manual , with circuit diagram and parts overlay , together with any mods please ???.
I have searched the whole web and not been able to find anything at all - apart from PLL 02a mods !!! - and manuals that you need a second mortgage to buy - pretty poor show for a hobby that has lasted as long as it has - in my opinion anyway.
Could someone please help ???.

Thanks.

Lee - JR2822 / UK

You need to look at the reason why the 55 limit was set in the first
place. Then consider that most of the freeways are designed to be safe
at much higher speeds. Nobody is denying that there will be people
that will exceed the speed limit, but there is really no comparison
with that and illegal radio -- it's not common for one speeder to shut
down all traffic for several miles in every direction.

2000. Train, the fag ass dick sucker is whining because he is WORRIED!!!! AntiKeyclowns are cracking up laughing!

So you blew all your money on a boat and live in a cheap trailer, that's not my problem. Besides the downtown folks in Detroit have been doing same thing for years with cars and houses. Impressed I'm not. Just remember when you're out on the boat the last several people that were attacked by pirates where helped by Ham Radio operators, not CBers. Keep that in mind when a strange boat loaded with burly men seem to be taking an unusual interest in you and your dingy.

Twisted: Mayday - Mayday - Twisted - calling Mayday. I'm being attacked by pirates!

Ham Operator: Calling dingy in distress. Is this the REAL Twistedhed?

Twisted: Yes -Yes. They're boarding my dingy with big guns.

Ham Operator: Try calling on channel 19 for assistance. We don't respond to forged Mayday calls.

Sounds of shots being fired as Ham reaches for VFO knob while commenting about the loud Roger-Beep sound effects.

No not at all...You have the address. Stop on by. 1 mile west of bloomingdale rd. on lake st. I'd be more than happy to show you around. Its kinda cool to see all the stuff that makes a car wash tick. You are totally looking in the wrong area for X-force, but suit yourself. I'm here almost everyday. As far as doing anything about x-force....why would i?? I dont care what they do. There are tons of drugs being sold everyday and being pushed on kids. Nothing i can do about that either. Maybe i should try making a citizens arrest. So anyway stop by the wash and i'll show you around. Have a good day. And yes, i am TJ1072. Boy are you guys smart. I only sign them both as 937. later guys.

937.....

Frank you must be an idiot.

"I showed this the very first day he opened his mouth here. He lies, too"

I bet you spent an hour typing the rules and regulations.

"I bet he does, too."

When you type do you have to look at the keyboard?

"Of course he does."

If so it took you a couple of hours just to reply. Spout the rules to your kids.

"This dude ain;t married. We are his first love. It prevents him from any other activity in life."

Oh My...Oh My...Buckeye

Sparky wrote: No, it took about ten minutes because is was mostly cut and paste from Part 95. But you know what, Gary? I really don't care

"Sure you do, which is why you took the time to resopond to his post."

about what you want to hear, and I don't care at all about what you think.

"You care what all us cbers think. You follow us like a lost pup. You are a follower."

So unless you are going to follow me around the threads and post garbage under my posts,

"Like you been doing? Let's not forget all your forges this weekend. You been real busy trying to screw things up, haven't you?"

like my other dedicated fans

"You have no fans, I saw to that. Now me, I, have fans. I have an entire brigade. I was the first cber here to be deified then worshiped by you, Dogie and the other couple. Dogie was the leader of my brigade, and for some reason (got too hot?) you felt more deserving of the title "Twisted

cb fan club head boy." Now focus your angry anonymity where it should be, on me, because I said so. I have a great big cb itch that needs scratched and it can only be helped by listenening to the bowl, triple 5, or some other pirate radio frequency where I know you can never be..."

do, piss off.
And don't email me again.

"The only time you use vulgarity is when you are upset. Who tweaked your beak? Because your weekend posts got no responses? And plagiarism never did become you, but why stop now? You may resume and redirect your verbal carnage thru Thursday. Have a good day and, if you have a radio, I'd love to hear you on the air."

Do as I say and not as I do. Is that your stance on things? I am going to make it my past time to piss off all the AntiKeyClowns and self appointed frequency police like you.

Well gee, Gary, you can try. The only thing you will be accomplishing is wasting your time and wearing out your keyboard. But if you really think it will accomplish something, go right ahead. Just remember that I never criticized you at all until you tossed your little bit of flaming wisdom in my direction. Same thing with Jay and Train. But I guess you have to defend all your buddies. So do whatever you feel you need to do.

"He's right, Gary. He lives here. He has a fridge to his right, his catheter bag hangs on his cb, and he wears an Attends until his nurse comes for her weekly visit and changes his water. Now you know where the handle "Sparky" came from. You can here him late at night on the cb. Follow the adjacent channel bleedover, he runs dirty equipment since he has no way of properly tuning transmitters."

Interesting how those who think someone shouldn't be heard will jump on the internet and advertise them far and wide. Doesn't make a lick of sense to me.

On the mangrove sanctuary flats where no motorized crafts are permitted, your oars are all that propels the jonboat. I could have taken the walkie-talkie to listen to the bowl, but opted not to. I took a cooler, 2 poles, tackle box and the bait bucket, so I missed most of the fun Saturday. The above was in my email this morning and the ham that sent it to me said it was used in another application and he didn't write it but said when he read it he instantly thought of me. I must admit, my next vacation I have folks to talk to all over the country, on all kinds of frequencies no matter where I may roam thanks to this ng and some highly motivated fans of mine. Whole lotta sandbaggers here, but they are here nonetheless.

Hey the man can do the �! Probably took you longer to figure that out than
to learn the code.

Traitor? Just cause you start a fight does not imply any duty on my part to support you. I don't buy tickets to a second-rate Arena football league because some bozo hung my town's name on it; I don't support some codeless Tech's activity trap for deferring the learning of Morse just because he is having problems with his testosterone levels.

Speaking of which, as I am old enough to know my sexual orientation and firmly believe the predeliction to homosexuality is born not made, these things tend to bounce off me. If you are playing with the nickname, be advised that you are the 51,238th yoyo to make this 'original' contribution this year.

When the young bull said, 'Let's run down to the pasture and get us a cow' us old bulls say, 'Let's walk down to the pasture and get 'em all' Us old guys do very well because we are in no hurry and view sending her to the ceiling as an art form. As old Bennie Franklin once observed of the older woman, she don't yell, don't tell, and don't swell. Suit yourself but this old bull is enjoying life.

Dick N�BK gracefully aging and mellowing boy wonder.

I must admit to not having seen this post until just now. I'll check it out, along with other applicable writings from the constitution and get back to you at my convenience.

Then I will apologize for the sarcasm. But your definition of a "law" seems to put much more emphasis on the canonical aspect, which is inappropriate for US legal matters.

"So is your argument concerning your definition of what cb is and about what is permissable to talk about here, since this ng is not carried only in the US, other frequencies and power levels certainly merit a valid discussion. Unfortunately for you, just because you say otherwise and don't agree, doesn't make it so."

I provided two definitions from two different dictionaries. If you have a different definition, please post it.

"You're funny, Spark."

2023. Riley report

Newsgroup: rec.radio.cb
Date: 2001-06-18 16:08:06 UTC
From: Richard McCollum <rmccollOMA@worldnet.att.net>
Message-ID: <GHpX6.5784$LA1.598799@bgtnsc04-news.ops.worldnet.att.net>
Source record: 86061

This week's RAIN report, http://www.rainreport.com

has an interesting action. Seems two truckers were caught on 10 meters so Riley & Company went to their employer to raise hell. My my. There was also a minor jacking up of an electric utility for interference to the Amateur Service.

If you caught the report last week, Riley gave a pretty good history of the rebuilding of the Enforcement Bureau over the last few years. Their thrust initially is the Amateur Service and the Land Mobile, first because the rebuilding is largely at the request of the Amateur Service and because some things were happening in Land Mobile outside the ability of the freq coordinators to fix.

Fiddly-farting on Amateur freqs has become a tad more dangerous of late, that's for sure and will more than likely continue to be as the Enforcement Bureau inherits all the field enforcement staff. Just how long it will take to get over the hump and start beating up the more egregious CB scofflaws is anyone's guess. I would suspect that when the gear is put away after this sunspot cycle, it might not be history's brightest move to dig it out for the next one.

Your even funnier Twisite, Can you tell us what countries this NG encompasses,
and what the rules are regarding power levels, frequencies used, technical
operating questions and lawful use in general and moreover why would you need
to discuss there Rules and reg when they don't pertain to you. So get cracking
you have a lot of info to look up since, we know you have no idea what they are
So go peddle that lame excuse on someone else.

My brother and I may show up. It's not that far from the Detroit area. If we don't make it, then good luck on your exams!

Dick with the Outlaw Cb attitudes of many in the NG I can guarantee you will
see some of the names who hang in here getting some air-time on the Riley
Report. The fact is you can't be first but you can be next. So which Illegal
Keyclown wants his name in Lights Come On Boys' Talk Tough To me.

This just in Mr. K aka Phoneman, Says in below posts which can be found by doing a search on Google that he never ever was a ham nor never ever wants to be a ham yet less than 2 weeks later is bragging on a ham Ng how he just got his license back after 20 years. To take this investigation a step further, he now posts in another Ng
with the name Eric, so a simple search of Qrz.com and Bingo Our newly crowned Ham. Eric aka Phoneboy aka Mr. knowitall. Thank You Thank You Hold the applause.

I just recently got back into ham radio after a twenty year absence
and I am amazed at what I have heard so far (in a week) on 2m
and up on 440. On the local 2m machine there is a guy from the
local club with a stopwatch running 24/7 who butts in and orders
users to identify if they run over the ten minute limit by 15 seconds
or so. I guess he's a repeater cop or something. Gotta love that.
On the University of PA linked repeater system on the other hand,
443.700 it sounds like channel 19 of the cb. Nobody identifies and
I swear I even hear them using echo mics. (They need a repeater
cop) I have yet to set up a 10-80 m rig and I am half afraid of what
I will hear there.

WARNING:
No Code Amateurs Douglas Adair N8WWM and Leland C Scott KC8LDO Have Been
Looks like you're still buying your Florida property from Twisted,

"See, here we have the classic Leland blunder. (Sigh) Just because you console yourself and comiserate with Spark and Dogie, does not mean everyone else on this ng does it with their pals. Not everyone is like you Leland, matter of fact, no one I have seen here is like you, and no one likes you, of course except Dogie and Spark..that ought to boost your sagging ego, eh?"

complete with alligators up to your rear. I though you learned your dumb lesson last time when you found out he sold you some " Florida wet lands". Of course Texas is no better right about now either. 8-)) So you let Twisted do your thinking for you because you don't have the smarts to do so for yourself? Seems like you and him are fixing to make another movie "Dumb and Dumber II".

"Ah, but we don't get out here and claim cb rules are to be obeyed by everyone and call people criminals for not following all rules to a "T" like you did, when it was shown that you were seeking a way to get around the law to put up an antenna in your HUD apartment. I and everyone else would say that appears to make you an outstanding hypocrite, does it not? Regarding your attempted insult concerning the term "dunb and dumber", we talk on our cb radios, our modded ham rigs, not to ourself under different names and forges in the ng. You can't say the same. 'Nuff said."

My My, into curbstone psychiatry these days? You have the classic fundamentalist mental defect where one is either a (insert in blank) or a satanist. Sorry, Murgatroyd, I ain't either one.

Not too likely I will get Rileyed anytime soon; I have made it pretty clear here than I cannot transmit in the freeband or the legal 40 and have no particular urge to. I would suspect that your communications to the FCC, if in fact they happen, go into the three-year Die Natural Death file.

Your megalomaniac viewpoint of yourself as one who has power is simply ridiculous. It has got beyond BOOOOOOOOOORRRRRing, it has reached doodah.

Train hopes to divert attention from his illegal cb operation. Haha so he
figures cut the ties with YNN.com. Does it really matter.

Dick, your balls have got to be hurting you since your outward apperance is one of trying to ride "The Fence" But the Illegals don't want you and the Anti's seem to bore you. You need to make up your mind Are you or Aren't you. That is the question.

Re: Riley report
Group: rec.radio.cb Date: Mon, Jun 18, 2001, 4:34pm (EDT+4) From: recradiocbpolice@aol.com (RecRadioCBPolice)
Fiddly-farting on Amateur freqs has become a tad more dangerous of late, that's for sure and will more than likely continue to be as the Enforcement Bureau inherits all the field enforcement staff. Just how long it will take to get over the hump and start beating up the more egregious CB scofflaws is anyone's guess. I would suspect that when the gear is put away after this sunspot cycle, it might not be history's brightest move to dig it out for the next one.
Dick NØBK

Dick with the Outlaw Cb attitudes of many in the NG I can guarantee

"YOU guarantee, child? Ha! The dude was right! You done been threatening everyone in this ng since XMAS. Your word never meant squat. Nothing has changed except you have managed to piss off everyone now, not just the freebanders. Even the hams who know how to approach a subject such as freebanding that try to elmer cbers no longer want anythng to do with you. You are a speck in the ointment, a needle in a fecal filled haystack. Nothing more. A little man who lost his way."

There is a difference between riding a fence, ignoring the fence, and
refusing to accept the existence of a fence. Don't ask me to get involved
in your crusade.

What the hell ties would I have with YNN?
BTW loser.....Show me where I have a illegal CB operation.
It does matter to some of us who are sick of the crap coming off their
servers. Dumbasses on a keyboard are one thing but there is no reason for
the flooding or the type of posts coming from the "anti" lapsuckers.

Short bus rider "Leland C. Scott" <no-spam@junk-mail.net> spattered forth his usual uninformed sputum:
Ah, but you do read the posts, and I would assume for their entertainment value only? For the most part, that's all they're for. 8-))
"What's the matter, can't compete, Lean? Why not go back in drag with your buddies in the hammie room and tell them all about how your call is bootlegged on 555 daily by fab frankie and the bay gang? I will tell you something about myself Lean since you are obviously of the intellectually challenged mindset. My
boat is 42 feet long and draws appproximately 10,000 gallons. I have an refrigerator, a stove, a freezer, a wastebasket and several matching pieces of furniture on it. Any time my buddies Train and Mopar or any of the so-called evil illegal keyclowns want to come spend the day drinking adult beverages and smoking contraband substances they are welcome to. But you Lean are not invited.
Do you want to know why? The drivel, Lean, the drivel. Your saucerlike eyes are widening now as you attempt to comprehend an obviously alien concept not taught in your computer college courses, I can tell. You think old Twist is about to leap off into the literate unknown, and you know, you may be right. But I have one thing on you. And that is fortitude. I will be a freebander until the day I expire and an author of some note, and there's nothing you or any short bus rider can do to take that away from me. My keyboard is clean and well dusted. My icebox is cold. I have a telescope on the bow which I take bearings on Tampa Bay
at the full moons perihelion. All this can only mean you arre a LOSER Lean, a loser of the penulitimate and rigorous type, one who can only be pitied as I pity you"

"A foolish consistency is the hobgoblin

of little minds."

"Alas, poor Leland. Forges all weekend, but then realized you forgot the "webtv" part. You fixed that today and added it. Now go capitalize the "T" at the beginning of my name and you may resume forging me and replying to yourself as only Dogie and Spark can teach you. You are almost as funny as Sparky, except Sparky can't tune a transmitter if his life depended on it. But then again, you profess the virtues of Morse himself, but fail to comprehend what Morse is and it's application, so maybe you two are head to head (chuckle) in the retainment department."

Knowing that amp uses 2x2290's as a drive stage, keep it at 2-4 watts dead key and swing about 25-35 into it. This should keep it happy and well fed. A happy amp is.....A happy amp!

Whatthehell difference does it make? Illegal activity is as old as radio. I do not condone it, I don't advocate it, but when an adult human being makes the decision it is a bit late to assume the role of counselor. I will offer a bit of advice: keep it between 25 and 28 and your life will be a happier one. I will on occasion offer a bit of technical input: there ain't no way to get more than 2 watts of audio on an ancient modulation signal. I have fun with the Prof's Muntz amps and will be derisive of 22-34 MHz radios with five tone roger beeps feeding an inverted V. And I will make the observation that most CB linears aren't. It is fun and that is the only reason I am here.

If I had any serious belief that anything I did changed anything at all let alone for the better it might be different but I don't so I won't. On occasion some have expressed an interest in the Amateur side of things and they will get the websites and some opinion on the folly of the codeless Tech. I will be tougher than nails on those using a ham ticket as some sort of admission to the peerage. Partially this is because over the years I have Elmered a number of freebanders, none of whom returned to the land above 405. They are misguided perhaps but arrived at that position honestly and can leave it the same way.

Like Carl Jung, I will tend my little garden and save a little piece of the world.

Dick N&#65533;BK

While you are arguing with this klotz you could have downloaded Morse
Academy from http://ah0a.org and gotten a start on being able to give him
some 10 meter DX reports.

I am sure the flooding of the Ng is a result of a keyboard malfunction. You cannot hold anyone to blame for this. The Anti Keyclown group is privatly Funded by Donations from legal Op's. As of now we are working on a shoe string Budget that why at time you will see multiple post the keyboard is just overused. but the thing that i don't get you say spamming and multiple posts take up Usenet Bandwidth , Correct. Well operateing illegal cbs does the exact same thing and no MB or Filter will take away a splattering amp but a well place NG filter takes away the unwanteds posts. So really comparing the 2 You have nothing to stand on. You cry about wasted bandwidth, yet you keep posting follow up posts after follow up posts after follow up post. Lets assume on an average day 200 posts come into the Ng If the Anti keyclown group gets to use 150 of them and you only get 50 so what, thats what you guys are saying in essence on the air. When legal ops want to talk and keyclowns with amplifiers key on them they get to use 0 frequencies or when they get massive bleedover from a nearby Keyclown running his new splatter box,
they get no use of there hobby something they also spent there money on. You can't have both way, you want free reign of all you do yet want to suppress the legal legitamate user.

Eric, do we need to bring up more info:

Ip Address: 64.41.43.222
Posting host: 43-222.pm4-1.chambersburg.supernet.com

Grasp at a few of these straws. Funny How The Phoneman posts to alt.sex.stories, Funny How the Phoneman is from Chambersburg Pa. Whats even more funny is that Mr.Know-it-all does these exact same things as noted by the posts below. Funny part is how Mr.K is also from Chambersburg Pa. Funny Part is you said you were run off the NG a few months back after your name was posted. Phoneman disappears Mr, K appears, phoneman says in one post I don't wanna be a ham. Phoneman says in another post to ham NG Hey I am a new ham. 1 week later old Eric is a confirmed Ham as per Fcc database. Wow Sounds like the X files Huh Eric. We have plenty more Eric, do you want to continue this lie or shall we.
We will provide links to Erics sex stories on Google as to Not offend our Loyal followers. Ya think these guys would have learned after Landshark was caught. Here we build the case.

Hello.....Hope everyones cb is working well today.
Funny....I don't hear any whining, pissing or complaining from Train.
He is in the same position as the rest of us in the business. He is sick
and tired of all this "anti" bullshit from the self appointed enforcers
of Part 95. It's hard to sit back and keep your mouth shut sometimes.
Train has simply blown his cork because the bullshit factor has
completely overwhelmed him. I must agree. However, I must refrain
from comment, and as bad as I would like to, I must keep my mouth
shut since someone who was supposed to be a friend leaked my true
identity some months ago, and a certain pompus asshole in the NG
cause me more than my share of problems. So.....more power to Train
and all others who do anything to piss off those who truly care about
out of band operators, amps, export equipment, mods and the sort.
A big hearty "Fuck You" to all the other dickheads who claim to care
but are really just a bunch of childish morons who stir the pot using
dozens of aliases posting and responding to their own posts.

I don't know how all you guys with the "Big Stuff" get away with it. You must all live in the Swamp or 50,000 miles from nowhere. I used to run a 1kw box here at the house in central PA in a populated area, with a Moonraker 4 at 60 ft. with a clean radio and the amp was clean. Never ran till after midnite or selectively during the day, and I still had people beating on the door. One instance in particular someone I knew was eating in a resturant with music coming across the PA system and they heard me shootin' skip over the music TWO MILES down the road. After that report I shut her down.

Message-ID: <RetX6.13478$pb1.495445@www.newsranger.com>
Source record: 86155

Here is the long awaited
ANTIKEYCLOWN GROUP FAQ
Last revised - 06/18/2001

Q: What is a KeyClown?

A: A 'KeyClown', in a nutshell, is a CBer gone bad. The name is derived from the term 'keydown', which is the equivalent of a dragrace using illegal radio amplifiers. A keyclown can be recognized by his or her open and public disregard for FCC regulations, total disrespect for other CBers, and hostile aggression towards any form of criticism.

Q: What is an Anti-KeyClown?

A: An 'AntiKeyClown' is a legal CBer that actively confronts keyclowns on their own terms. Disrespect is countered with disrespect, hostility with hostility, etc. Any method or tactic used by the keyclown to harass legal CBers, intimidate proponents of legal operation, or dominate either the Citizen's Band or any other aspect of legal CB use, will be considered a fair and viable method or tactic for use against the keyclowns.

Q: Are the AntiKeyClown posts actually all the work of N8WWM? Or Sparky? Or Leland? Or...?

A: There are many AntiKeyClowns. Each Anti takes upon him or herself the role that is best suited to their talents and abilities. While one Anti may choose to remain 'behind the scenes', another will perform their duties as a spokesperson. Some wish not to be indentified, while others enjoy the freedoms of full exposure. An Anti need not identify him or herself as such, and may make only a minor contribution to the effort. This describes the majority of the AntiKeyClowns. Only a few have choosen to be visible.

Q: Why do you hate illegal/outlaw CBers?

A: AntiKeyClowns are not about hate. An Anti is typically a person that has been offended, disturbed or victimized by the actions of keyclowns, and has chosen to take action instead of accepting defeat at the hands of outlaws.

Q: What do keyclowns do?

A: A keyclown generally ignores two important laws:

The first is by using radio frequency amplifiers with their CB radios. These amplifiers are usually of poor design and construction, and will emit powerful harmonics. These harmonics, or "splatter," interferes with broadcast radio and television, as well as other legal radio communications such as police, fire, ambulance and aircraft communications. It also disrupts the Citizen's Band on other channels, making the channel or band

useless for several miles within the radius of the keyclown. Many times this disruption is done with the deliberate intention of "shutting down" legal CBers.

The second law involves the use of frequencies that are outside of the Citizen's Band, and can even intrude on the 10 and 12 meter Amateur Radio bands. The primary reason for doing this is because people like themselves have made the legal channels useless in their area.

The behavior of keyclowns, if left unchecked, may eventually lead to the elimination of the Citizen's Band altogether. As the number of keyclowns increases, so will the need for more bandwidth and more power. This is a "king of the hill" mentality, and anyone that operates legally is thrown off the hill. At some point in the future the keyclowns will become so loud and disruptive that the only way to stop them is to 'clear the board' by shutting down the Citizen's Band completely. We would like to prevent both from happening.

Q: So why don't you just make your point and then go away? You're being "rude" by contantly poking your nose where it doesn't belong.

A: The Anti's believe in the Golden Rule.

Q: But you're just riling up the illegals and making them angry. That's not being a responsible person.

A: Their actions and emotions are not our responsibility.

Q: Why don't you go back and clean up your own mess on the ham bands?

A: The AntiKeyClowns have nothing to do with the Amateur Radio Services. It is true that some of the Anti's are hams, but it is also true that some of the keyclowns are hams as well. Amateur Radio has no more relevance to this subject than does saltwater fishing.

Q: But I'm a ham and I don't care what goes on on CB.

A: You should. Every year the "CB problem" gets worse, not better. More phoney export radios are flooding the market. More freebanders and confused truckers are showing up on 10 meters. We guarantee that if nothing is done, amateurs will be unwillingly "sharing" the 10 and 12 meter bands with illegal CBers in a very short time. And with the increase of illegal amps splattering into your home entertainment systems and other consumer devices, this is an issue that needs to be addressed not only by CBers and hams, but also by the general public.

Q: I support legal CB, but I do it quietly.

A: As stated before in this FAQ, each person will do what they feel is best for them. However, illegal radio operation is making the radio spectrum a very noisy place. In time, your quiet legal radio operation will be silenced by the keyclowns. This is what the Anti's see in the very near future, and it is what we are trying to prevent.

Q: You can't stop people from posting. It's perfectly legal to talk about illegal CB.

A: It is not our intent, nor can we prevent anyone from excercising their rights under the 1st amendment to the US Constitution.

Q: So why don't you go to a CB coffee break and harass people?

A: Our methods are diverse, but legal. We have noted the hostility of many of these illegal operators, and any attempt to provoke a group with another group would probably incite large-scale violence. Violence is not our intent, and would not benefit anyone. We would prefer to stand at a distance and collect information that can be used by the proper authorities.

Q: But I thought the law said I can own an export radio.

A: The FCC has issued a reminder about those HF transceivers ostensibly marketed for "amateur" use but actually designed and intended specifically for the so-called "freeband" radio operators who operate primarily in the 26 to 28 MHz frequency range. This notice, as well as all other FCC related material my be found at www.fcc.gov.

Q: Why can't I sell my CB amp or export radio on the newsgroup?

A: We cannot provide any legal advice except to suggest that anyone interested should read the FCC regulations. If you are in doubt as to how those regulations apply to you, consult an attorney, or email the FCC and they will provide a quick and authoritative answer to your question.

Q: But illegal CBers are just "bending the law." These laws are trivial.

A: The laws that are being "bent" can result in fines up to $75,000 and up to 1 year in prison. The punishment is not trivial, nor is the crime.

Q: The FCC doesn't enforce these laws, so why should I bother to obey them?

A: The FCC's recent lack of enforcement is no reason to think that they cannot enforce these laws at any time they please. That is a decision to be made by the FCC, not the AntiKeyClowns.

Q: It's civil disobedience. Like the Minutemen did during the Revolutionary War. Or Rosa Parks during the Civil Rights protests.

A: We are, and always have been, open-minded to any argument providing moral justification for this illegal behavior. Unfortunately, no one has provided such an argument.

Q: Are you flamers? Trolls?

A: Yes and no. We flame and troll as necessary. Keyclowns are the only targets, and only keyclowns that have previously trolled or flamed others.

Q: But you're screwing up the newsgroup.

A: Keyclowns have been "screwing up" the Citizen's Band for several years. We exist as a consequence of their behavior. Please do not confuse 'cause'

(the keyclowns) and 'effect' (the AntiKeyClowns). Without keyclowns there would be no AntiKeyClowns.

Q: Your anti-illegal CB postings are useless.

A: Perhaps. Perhaps not.

Hey Twist, in what countries is operation on 27.555 permissible to cbers?
In what countries are linear amps permissible to cbers?

| Does anyone have the circuit diagrams for the Elftone EL-CB-6000 CB radio. I
| think the main amp has blown in mine and the diagrams would be handy for
| fault diagnostics.
|
| Glen Ryan

I believe that radio has one of the 'lake' chassis often used by fidelity (and others).
Can you confirm if this is correct ?
I have a diagram for at least one of the UK lake chassis.

I could send a scanned copy of the diagram to your e-mail address.

please reply to my e-mail address below.

2073. Re: Galaxy 350 Amp Problems

Newsgroup: rec.radio.cb
Date: 2001-06-18 20:40:59 UTC
From: Brainbuster <brainbuster@supanet.com>
Message-ID: <9gloshktk2@thyme.nntp.netline.net.uk>
Source record: 86163

I don't know that particular model but the most common cause of ouput faults
is the output transistor, valve, or relay. In a valve amp, the output usually
drops gradually over a period of time (as the valves go 'low emission').
Transistors usually just stop working .

With the information you give, three common faults come to mind:

1. OUTPUT TRANSISTOR
If the amp has more than one output transistor, then one going faulty will
usually drop the output considerably, but not stop it dead. In a two transistor
amp, it is possible for a single faulty transistor to go unnoticed until the second
one goes and there's no output.
You can test the transistor by disconnecting the pins, and testing the b-e and
b-c junctions with a multimeter.

2. INPUT RESISTORS (if the amp has a power level switch)
Some amps have a switch on the front to reduce the output. This is usually done
by attenuating the input from the radio. These resistors get quite warm, and can
burn out, or even cook the board.

3. RELAY
Amps with a RX pre-amp often have two relays - the larger one deals with the
output side. The contacts in this relay can become 'dirty' due to arcing across
the points. This will blacken the contacts, and although the relay will still click,
the power will not get through. As this will effectively disconnect the antenna
from the output, prolonged keying with this fault can destroy the transistors.

As for diagrams for amps - I don't think many are generally available as amp circuits
are usually quite simple. and most follow very similar designs.

Hope this is of help .....

I guess you enjoy getting robbed by mom and pop for your gas eh?
And I'll bet YOU NEVER buy you gas at "Wally World" to save a
couple dollars on a tank, do you? I kind of like paying $1.68 at "Wally
World"
as you call it, rather than $2.02 a gallon at mom and pops "Blue Chip"
market.

I wish they

Hmmmmm. "Wally" doesn't fix cb's or install or modify them now does he? Did
you ever
stop to thank that while they are hurting your sales business, they just
might
be helping your mod and install/repair business. I couldn't compete with
Lowes, Walmart
Kmart etc. on Televisions and Stereo equipment either, but guess who does
ALL
their repair work? I can't say I completely disagree with you (that scares
me) about
their undercutting the little guy, but when it happens you have to look at
a way to
profit from them.

ANTIKEYCLOWN GROUP FAQ
Last revised - 06/18/2001

Q: What is a KeyClown?

A: A "KeyClown", in a nutshell, is a CBer gone bad. The name is derived from the term "keydown", which is the equivalent of a dragrace using illegal radio amplifiers. A keyclown can be recognized by his or her open and public disregard for FCC regulations, total disrespect for other CBers, and hostile aggression towards any form of criticism.

Q: What is an Anti-KeyClown?

A: An "AntiKeyClown" is a legal CBer that actively confronts keyclowns on their own terms. Disrespect is countered with disrespect, hostility with hostility, etc. Any method or tactic used by the keyclown to harass legal CBers, intimidate proponents of legal operation, or dominate either the Citizen"s Band or any other aspect of legal CB use, will be considered a fair and viable method or tactic for use against the keyclowns.

Q: Are the AntiKeyClown posts actually all the work of N8WWM? Or Sparky? Or Leland? Or...?

A: There are many AntiKeyClowns. Each Anti takes upon him or herself the role that is best suited to their talents and abilities. While one Anti may choose to remain "behind the scenes", another will perform their duties as a spokesperson. Some wish not to be indentified, while others enjoy the freedoms of full exposure. An Anti need not identify him or herself as such, and may make only a minor contribution to the effort. This describes the majority of the AntiKeyClowns. Only a few have choosen to be visible.

Q: Why do you hate illegal/outlaw CBers?

A: AntiKeyClowns are not about hate. An Anti is typically a person that has been offended, disturbed or victimized by the actions of keyclowns, and has chosen to take action instead of accepting defeat at the hands of outlaws.

Q: What do keyclowns do?

A: A keyclown generally ignores two important laws:

The first is by using radio frequency amplifiers with their CB radios. These amplifiers are usually of poor design and construction, and will emit powerful harmonics. These harmonics, or "splatter," interferes with broadcast radio and television, as well as other legal radio communications such as police, fire, ambulance and aircraft communications. It also disrupts the Citizen"s Band on other channels, making the channel or ban useless for several

miles within the radius of the keyclown. Many times this disruption is done with the deliberate intention of "shutting down" legal CBers.

The second law involves the use of frequencies that are outside of the Citizen's Band, and can even intrude on the 10 and 12 meter Amateur Radio bands. The primary reason for doing this is because people like themselves have made the legal channels useless in their area.

The behavior of keyclowns, if left unchecked, may eventually lead to the elimination of the Citizen's Band altogether. As the number of keyclowns increases, so will the need for more bandwidth and more power. This is a "king of the hill" mentality, and anyone that operates legally is thrown off the hill. At some point in the future the keyclowns will become so loud and disruptive that the only way to stop them may to "clear the board" by shutting down the Citizen's Band completely. We would like to prevent both from happening.

Q: So why don't you just make your point and then go away? You're being "rude" by contantly poking your nose where it doesn't belong.

A: The Anti's believe in the Golden Rule.

Q: But you're just riling up the illegals and making them angry. That's not being a responsible person.

A: Their actions and emotions are not our responsibility.

Q: Why don't you go back and clean up your own mess on the ham bands?

A: The AntiKeyClowns have nothing to do with the Amateur Radio Services. It is true that some of the Anti's are hams, but it is also true that some of the keyclowns are hams as well. Amateur Radio has no more relevance to this subject than does saltwater fishing.

Q: But I'm a ham and I don't care what goes on on CB.

A: You should. Every year the "CB problem" gets worse, not better. More phoney export radios are flooding the market. More freebanders and confused truckers are showing up on 10 meters. We guarantee that if nothing is done, amateurs will be unwillingly "sharing" the 10 and 12 meter bands with illegal CBers in a very short time. And with the increase of illegal amps splattering into your home entertainment systems and other consumer devices, this is an issue that needs to be addressed not only by CBers and hams, but also by the general public.

Q: I support legal CB, but I do it quietly.

A: As stated before in this FAQ, each person will do what they feel is best for them. However, illegal radio operation is making the radio spectrum a very noisy place. In time, your quiet legal radio operation will be silenced by the keyclowns. This is what the Anti's see in the very near future, and it is what we are trying to prevent.

Q: You can't stop people from posting. It's perfectly legal to talk about
illegal CB.

A: It is not our intent, nor can we prevent anyone from excercising their
rights under the 1st amendment to the US Constitution.

Q: So why don't you go to a CB coffee break and harass people?

A: Our methods are diverse, but legal. We have noted the hostility of many
of these illegal operators, and any attempt to provoke a group with another
group would probably incite large-scale violence. Violence is not our intent,
and would not benefit anyone. We would prefer to stand at a distance and
collect information that can be used by the proper authorities.

Q: But I thought the law said I can own an export radio.

A: The FCC has issued a reminder about those HF transceivers
ostensibly marketed for "amateur" use but actually designed and intended
specifically for the so-called "freeband" radio operators who operate primarily
in the 26 to 28 MHz frequency range. This notice, as well as all other FCC
related material my be found at www.fcc.gov.

Q: Why can't I sell my CB amp or export radio on the newsgroup?

A: We cannot provide any legal advice except to suggest that anyone interested
should read the FCC regulations. If you are in doubt as to how those regulations
apply to you, consult an attorney, or email the FCC and they will provide
a quick and authoritative answer to your question.

Q: But illegal CBers are just "bending the law." These laws are trivial.

A: The laws that are being "bent" can result in fines up to $75,000 and up
to 1 year in prison. The punishment is not trivial, nor is the crime.

Q: The FCC doesn't enforce these laws, so why should I bother to obey them?

A: The FCC's recent lack of enforcement is no reason to think that they cannot
enforce these laws at any time they please. That is a decision to be made
by the FCC, not the AntiKeyClowns.

Q: Illegal CB is civil disobedience. Like the Minutemen did during the Revolutionary
War. Or Rosa Parks during the Civil Rights protests.

A: We are, and always have been, open-minded to any argument providing moral
justification for this illegal behavior. Unfortunately, no one has provided
such an argument.

Q: Are you flamers? Trolls?

A: Yes and no. We flame and troll as necessary. Keyclowns are the only targets,
and only keyclowns that have previously trolled or flamed others.

Q: But you're screwing up the newsgroup.

A: Keyclowns have been "screwing up" the Citizen's Band for several years.
We exist as a consequence of their behavior. Please do not confuse 'cause'

(the keyclowns) and effect (the AntiKeyClowns). Without keyclowns there would be no AntiKeyClowns.

Q: Your anti-illegal CB postings are useless.

A: Perhaps. Perhaps not.

Hi Train,

As stated in the FAQ, illegal keyclowns such as you appear to have no goal other

than to dominate the airwaves with overpowered signals and break any laws you choose. If you disagree with this evaluation then perhaps you can explain to the NG what it is that you guys stand for.

Hello Train, and Goof ball in the corner pocket:

Yes train is right, these radios are advertised in Popular
Communications, and QST Magazines.

I just picked up two of them, brand new in the box (2970"s) for a
antenna trade.

Oooops Miss Dinah on line 1, I am out ah here..........

Frank, If people ACTUALLY took the time to read the constitution.....They would REALLY get pissed off! With so many of our right s being given away on a daily basis by congress (opposite of progress), government will soon be hiding the real constitution and putting some contrived diatribe of manufactured bullshit in it's place. One good example would be firearms and ammo. tell me why ammo i bought legally in one state is actually banned by a different state to the point that simple possesion of a single round is a felony and each round past the count of one is a seperate felony unto itself? What part of "To keep and bear arms" did we forget about in this scene? If simple possesion of an amp is such a bad thing or a radio that can brodcast outside it's intended range (and I have yet to see a radio that can't be made to do this) we need to seriously rethink the process by with we send people to represent us in congress.
Train

Hey Sharky.....Good to see you back!
Here is part of what you need to look at in the header. It's not always productive to go to the posting domain about abuse as is the case with YNN. See below:

Newsgroups: rec.radio.cb
X-User-Info: 63.27.181.5 63.27.181.5
NNTP-Posting-Host: pro55a.wfarm.ynn.com

X-User-Info tells a whole different story here.

63.27.181.5 is UUNET or uu.net if you like. These folks are MAJOR backbone upstream providers out of Virginia who don't really like downstreamers who can't clean up their own mess. They were not to happy to hear that any communication with YNN is either ignored or just trashed. Some of you might have also tried calling them to find all published numbers for them are disconnected or not in service.

Gary wrote:

> If I have a 120 Amp 12 Volt DC Alternator how big of an amplifier
> would I be able to use?

I need a 125 amp for a Texas Star 667-V. I took my alternator to a local shop and they rebuilt my Delco unit into a small powerhouse.

> Would I be able to power an eight pill (8x2879's) or would I starve the box

> on a 120 Amp 12 Volt Alternator. Should I stick with let's say two driving
> four or could I go bigger? What about 2x2290's driving 6x2879's?

To do that, you need a separate alternator for the 8 X 2879. Run the driver and the rest of the car on the stock alternator. This also means you need a second battery and if the regulator is not built-in, like a Delco, all the associated hardware and wiring. Use #4 minimum. Use stranded wire in a mobile installation. Solid wire will break in a short time from fatigue.

Back in the 70's a was one here in Jersey.......We aven had our onw little
group. didn't hurt that i could see NYC 30 miles away from my front porch.
Altitude is always king!

> and a seller of illegal cb gear.

People say I have done this but you won't find a single person to go along
with it.

No, he'll avoid the question - or dodge
> it with threats and profanity.

I don't make threats. Profanity is another story though.

Watch and see.

It's still cheaper then a cable modem, but the disconnects will drive
you nuts. I love my 1100+KBPS transfer rate. 5MB MP3 in less then 1 minute.

(Is it still illegal to download copywrited music for personal use?)

If no one cared what we said, then our posts would be ignored.

Instead, there is a barrage of replies, threats, or profanities directed to us by illegal cbers who feel very very uncomfortable when we criticize them.

Hey Scott,

Can an Alternator be rebuilt to allow for about 200 Amps? I think that
would do nicely. I await your response.

Are you near a transmitter? Where are you posting from today? Work or
home?

And the "EXPERT" news post header reader can't figure that simple one
out? Gee Twisted, you have really disappointed your fans now. Me, I knew
you never could figure out how to read your own post's headers, much
less a post from anyone else, so at least I'm not disappointed.

"Hmmm..you have called me your leader, you have deified me, advertised
me, prayed to me, cursed me, emailed me, threatened me, lied to me and
forged me. You try to divert any questions directed toward you.
I still maintain you appear as a hypocrite (and no one took issue with
that or reacted except you) for calling people criminals for not only
breaking rules, but for talking about breaking a rules. Then like magic,
one of your own clandestine anticbers posts a post of yours seeking
illegal assistance in circumventing federal housing laws and regulations
in order to put up a cb and amateur antenna. You couldn't get out good
enough on a wire antenna so you decided to go the illegal route. You
feel you are above the law to pick and choose what rules to obey? I see
the logic here, Leland. Can you explain your positon here, Leland,
concerning your hypocritical rationalization on why a federal housing
law that is restrictive on external antennas is perfectly ok for you to
disregard?
Now you blast people for asking questions and seeking information
similar to what you have asked. This fits perfect with your "I had the
info available to me now you can't have it" cavalier attitude that
prevails right along side your erroneous preconceived thoughts and
notions of "I-AM-HAM everyone will care what I say and have reverance
for me" bs that was responsible for your lousy attitude when you found
out it simply wasn't so.
Also as was pointed out to you, you indeed forged, and lied about it.
This is where I believe your problem lies. Your arrogance will not allow
you to move on past the fact that you were caught. Deal with it, move on
and stop harboring such resentment. If it wasn't me, someone else would
have pointed out your forges. It was only a matter of time.
As if the above merit couldn't stand on it's own (it can, and does,
quite successfully, ty) You failed to answer the question. Where are you
posting from at this time and do you have a transmitter near you? Have a
good evening." 8)

Hey,

Thanks for the invite. I am going to make it my mission to piss off the AntiKeyClowns. I have a Kenwood TS830S and a G5RV hooked up to the Ameritron. Have to use a tuner between the radio and the amplifier. I can go vertical on the Ham International . The G5RV cuts down on the noise. I have a boat....and a Dodge....

Oh My...Oh My...Buckeye

well thanks for that, but now it looks like I will not be going, I am flying out to Houston Tx at 9:50 am tomorrow and will be gone most likely at least 3 weeks to help out with the disaster relief effort from the flooding due to tropical storm allison, $15,000,000 in damage on low end of the scale. I will be working with the emergency communications and logistics with the Red Cross.

So I doubt I'll be back in time for the Ham Fest, I'll also miss the 4th of July REACT Safety Break our team is sponsoring. Oh well there is always next year.

Both units are being sold new over the counter today as we speak. This includes radio shops, Wal-Mart,catalogs, online companies,truck stops.......The list goes on and on. In the event you find some BS about two highly sold units all of a sudden being illegal I think we'd all love to hear about this one. I have a few 2950's and numerous 122's here even have a few of the Rat Shack versions of the 122.
Now that I have proved a negative, prove a possative if you think you can. You made the challenge.....Put up or shut up.

>
>the NG what it is that you guys stand for.

Sure thing! Lets start with the "you guys" you are so fond of pointing fingers
at are all much different individuals who do what they want when and where they
want. There is no conspiring to speak of unlike some others clicks that post in
here. You might find that these people are feircely competetive by nature and
are the type of individual who does not like to be told how, when, or where
they can or can't do something. You don't have a problem with a group here you
have a problem with many single people who will not be intimidated or shouted
down by a bunch of pukes who have nothing better to do than bitch and moan
about something they don't like. Spouting off this rule and that regulation to
these people is just pissing in the wind as it was put the other day by
somebody else. What I do or Sharky does or the new guy Gary does, or who sells
what used or new equipment should not concern you or the poeple who are not
interested in buying such a thing. There is no arm twisting involved, just
people doing the sort of thing that has for over 200 years made this a great
country to live in. Free and open exchange of.....damn near anything.

And there is no arm Twisting to read the Anti's posts, and you should not concern yourself or be concerned of the people who are interested in buying legal items. But what you are doing is affecting other legitimate people who want or cannot use their radio because of the kaos, thuggery, rf bullies, pirates so you say just stand here and take it, would you do the same if a group of thugs wanted to take over your block. Would you say the same thing "Aww hell , just people doing the sort of thing that has for over 200 years made this a great country to live in. Free and open exchange of.....damn near anything." Sell those drugs sell those guns in front of my house, what can I do I am out numbered. Yeah Train I can see the thug mentality you possess. How can you actually sit there and criticize someone who wants to be legal or someone who you can liken to Jesse Jackson and your buddy Al Sharpton people who just want to do the right thing. I mean should I say the same thing to all the non marijuana smokers out there, I can see it Now "Hell Do you know how many people smoke marijuana? F--- the police they cant stop us, If we want to smoke pot we damn sure will, to hell with the rules, we will smoke whenever and wherever we want to, Who are we hurting?" If you want to do it do it in private emails, don't flaunt it like you don't care or that it is completely legal, it's that cavalier attitude is what will be some peoples demise as far as radio. Everyone has a competitive nature some more than other but that doesn't give anyone the right to deprive others of there rights or from there right to legally enjoy something.

Uh, Twisted. I think you are exaggerating just a bit. First, "draws" is not measured in gallons - it is normally used to indicate the depth in feet of the bottom of the keel/rudder. And the boat certainly does not displace 10,000 gallons (and gallons is not used to measure displacement either). That would be about 80,000 pounds, and no sailboat as small as 42 foot is going to displace that much water.

Displacements on the 40-55 foot sailboats that I teach on usually run in the 10,000 - 20,000 pound range.

How, by ignoring the fact that much of the havoc on the CB band is due to Hams - according to the FCC?

The Citizen's Band will muddle along and survive - with or without an intervention by the FCC or by Hams. In another 3 or 4 years, we will be approaching the next sunspot low, and the band will be pretty quiet except for local communications. Only the diehards will still be hunting for the fairly short and rare dx opportunities.

What Hams need to do is spend their efforts where it will do some good, cleaning up the Ham bands - including unlicensed operators on the Ham bands.

Well, of course, there are inconsiderate operators in the ham bands.
If there wasn't any, you wouldn't see news of recent enforcement
actions in QST. Still, listening to the local repeaters and listening
to the local CH19, ham radio seems to be "cleaner", if you want to use
that word.

This is getting off the original topic of the post, however.
The point has been made and I'm outta here.

Look dipshit, just police your own block, and leave the rest of the world alone. You seem not to have the nards to worry about the problems you just mentioned, but have chosen to hide behind imaginary names and screw with the NG. The only real reason that comes to light in your endeavors, is the fact that you can remain to some extent anonymous in your chosen pursuits. That makes you a wimp! Nothing less, nothing more. You should really seek mental help. There are many more worthwhile causes in the world that could use your devotion and fervor. PETA and the SPCA come to mind at first thought, but Bob Barker would probably not let you lick his shoelaces.

Since you seem to think that 11 meters is not global, but rather some obscure low band VHF spectrum, deal with the issues you have spouted locally, then, when you have control of that part, come to the NG and try to make a difference. Until then, please rant and post quietly......otherwise, you make no sense, and appear as little more than a moron.

2146. FCC Chairman Michael Powell Is Making Waves

FCC Chairman Michael Powell Is Making Waves

By Frank Ahrens
Washington Post Staff Writer
Monday, June 18, 2001; Page C01

For a man who has said he wants his record to speak for him, for an agency head who has vowed not to be an activist, Michael Kevin Powell entered the Washington political conversation with a pool-clearing cannonball off the high-dive.

In February the new Federal Communications Commission chairman met the press for the first time. Powell, 38, had been one of the FCC's five commissioners since 1997 - a fairly low-profile position, if you want it to be. In January the Clinton-appointed FCC chairman, William Kennard, resigned. The Bush administration quickly picked Powell as successor.

What was known about Powell:

<fHe was the son of Secretary of State/war hero/possible presidential candidate/Most Admired American Colin Powell.

<fHe'd had some kind of accident while in the Army.

<fHe was a black Republican whose commission votes often, but not predictably, favored both big business and minority broadcasters.

What was less known about Powell was exposed at his introductory news conference: that he has an impatience for sloganeering and an ex-soldier's appetite for a little hand-to-hand combat.

Several dozen reporters were peppering the new chairman. The Question came at the end of the one-hour session:

"I wanted to see if you could give us your thoughts about this agency's role in dealing with the so-called digital divide . . ."

The next day's papers printed part of Powell's answer:

"I think there's a Mercedes divide. I'd like one, but I can't afford it."

Ker-splash! Everybody's wet!

Immediately the controversy began. Powell took heat from lawmakers, from minority broadcasters, from advocacy groups. He was told that he sounded insensitive, aloof. It would have been a terrific line - if Powell were a provocateur talk radio host.

But, good grief, everyone knows the Washington answer to that question: You're against the digital divide. You'll do everything you can to eradicate it. Next question?

Instead . . .

"He sent shudders throughout the entire industry," says Talib Karim, a Washington telecommunications lawyer. "There are programs built on removing the digital divide and people felt that statement almost completely killed the need to pursue those programs."

Over the past decade, the FCC has gone from being just another big Washington alphabet bureaucracy - FCC, FTC, FAA - to one of the most important. The communications revolution has reached seemingly every corner of the culture. Ten years ago, car phones were exotic. Now, you can buy a top-grade cell phone at any 7-Eleven.

As FCC chairman, Powell is the chief regulator of the companies that determine what you watch on television and listen to on the radio. He also applies the law to companies that provide telephone service, Internet access, cable television, cell phone and pager service and just about every other form of human and machine communication. FCC decisions made today will shape how Americans converse for years to come.

So people pay a lot of attention when the chairman communicates.

The "Mercedes gap" answer proved a fine distillation of the man: Powell gave a long (4½-minute) response, full of provocative ideas, in an occasionally combative tone that nevertheless got some laughs. He bristled at the notion that a slogan should be turned into public policy, least of all by an unelected body.

Here's what bracketed the Mercedes Quote:

"I also think the term ["digital divide"] sometimes is dangerous in the sense that it suggests that the minute a new and innovative technology is introduced in the market, there is a divide unless it is equitably distributed among every part of the society, and that is just an unreal understanding of an American capitalistic system. . . . [Mercedes Quote here] . . . I'm not meaning to be completely flip about this - I think it's an important social issue - but it shouldn't be used to justify the notion of, essentially, the socialization of deployment of the infrastructure."

The entire quote establishes the new FCC chairman's bona fides as a probing, iconoclastic market capitalist. The Mercedes quote alone? It made him look about as out of touch with the common folk as his current president's father when confronted by a supermarket checkout scanner. And a little meaner, too.

Regrets?

"I might regret the phrase only because people might have misinterpreted it," Powell is saying now, in a recent interview in his spacious corner office on the eighth floor of the FCC's headquarters in Southwest Washington. "But I do not regret what I was trying to explain: If we're prepared to be serious and not symbolic, let's talk about the digital

divide."

And so he talks:

"People have swept up in that concept every hope and aspiration you can imagine." And: "Some people can afford a Mercedes, some people can afford a Toyota Tercel. But they both have available to them the same basic functionality of a car." And: "I had a professor once say to me, 'Name a technology that has bypassed poor people.',"

Sitting in his office, he is more voluble and relaxed than when facing down a horde of trade-publication reporters. He has the aura of a man who believes that, in any one-on-one conversation, he could bring you around to his point of view or at least gain your grudging respect. Not surprising, considering his strongest Capitol Hill allies are the often-blunt Sen. John McCain (R-Ariz.) and Rep. Billy Tauzin (R-La.). (The promotion from FCC commissioner to chairman bumped Powell's salary from $125,700 to $133,700.)

Powell's smooth features and high-cheekboned smile shave about five years off his age. Well trimmed in a charcoal pinstripe suit undergirded by suspenders, he settles into an upholstered armchair and crosses his right leg over his left.

It is not a meaningless posture.

Sitting in this fashion is easier on his spine, which is fused at its base, forcing him to walk with a slight forward pitch. And there's another thing: If an interviewer stabbed his Bic pen into the top of Powell's right thigh, the FCC chairman would not feel it.

Asleep at the Wheel

Explanation can be found in a right-hand drawer of Powell's big wooden desk, a few stiff-muscled paces away. There, he keeps four photographic slides, neatly inserted in a clear plastic scrapbook page. They're slides of X-rays.

They show a human's skeletal midsection, like the bones of a child's Halloween costume. But they look more like a puzzle: In one slide, the spine is where it ought to be, but the pelvis appears snapped in two, half of it floating inside the body at a cockeyed angle. Another slide shows the pelvis back in its place, but not on its own. Bones are bolted together by a steel truss that looks like a model railroad bridge.

This is Michael Powell's gut, circa 1987.

It was a warm summer evening of that year, and Powell was a 24-year-old executive officer with the U.S. Army's 3/2 Armored Cavalry regiment, stationed in Amberg, Germany.

He and his unit were traveling in a convoy on the autobahn, heading back to the base after a day of scouting the German countryside. The soldiers were in a convoy on the autobahn, traveling about 50 mph. Powell was riding shotgun in a World War II Jeep (the kind you see on "M*A*S*H" reruns). In the back seat was another officer; driving was a young private. No one wore

a seat belt.

It began to rain, and Powell was lulled into a doze by the pit-pat of the raindrops and the droning sound of the wheels.

So was the driver.

Sensing the Jeep drift toward the guardrail on the right, Powell awoke and saw his driver's head bobbing. Powell barked at him to wake up; the private snapped awake and jerked the wheel left, sending the Jeep veering into oncoming traffic. Panicked, he yanked the wheel back.

Powell knew what would come next.

"The Jeep lay down on its side," Powell says, using his hands to illustrate. "I can see the sparks and hear the noise right now. I have this burned into my brain; I can do it frame by frame."

Powell was hurled skyward. He hit the pavement and rolled. Then, according to military officials who reconstructed the accident, the Jeep bounced, crashed down on Powell's midsection - flattening it - and bounced off.

"Don't move! Don't get up!" were the first words Powell remembers hearing, the soft voices emerging from the quiet, growing louder and louder as if someone were slowly turning the volume knob in his brain.

He felt no pain.

"I couldn't figure out how to move. It's not like my legs were hurt; it's like they were gone. I had no mental connection to my legs."

His arms still worked. He reached down to feel his hip. It felt three times its normal size. He wanted a drink of water.

Rain sprinkled on him as he lay on the pavement. He closed his eyes.

"Oh, my God," he thought. "I broke my back."

Instinct for Survival

Half of Powell's pelvic girdle had snapped off its rear anchor on the lower spine. In the front, it had ripped free of the cartilage connecting it to its other half. His bladder was torn and the urethra was ripped loose. Vertebrae were cracked. Even his bones gushed blood.

"Essentially, your middle is broken in half," Powell says. "You're literally separated."

After a few hours, and some cursory attention from German emergency room doctors, Powell was flown to a U.S. Army hospital in Nuremberg. After being stabilized, he was flown to Washington and admitted to Walter Reed Army Medical Center on upper Georgia Avenue NW.

"Where I lived for the next year," he says.

The family cinched around the young Powell. Linda Powell, one of his two sisters, slept in his hospital room, helping with his physical therapy. And when he returned home, the Powells set up a hospital bed in a downstairs room; his other sister, Annemarie, slept on the floor and woke during the night to turn over her brother, a former high school gymnast.

The three-star general sat with his son, holding his hand and watching "Brady Bunch" reruns on television. (Colin and Alma Powell declined to be interviewed for this article.)

"He went through tremendous amounts of depression," says Annemarie of her brother.

Every act was freighted with struggle and debasement: Powell urinated for months through a tube in his abdomen.

In a 1996 speech Powell gave to the Rehabilitation Nursing Foundation, he said, with a mix of power, pathos and melodrama:

"I had hit bottom. This was dangerously real, and I was losing. . . . It is as if you are cast on a great dark ocean with no rescue in sight and are forced to ask yourself each and every moment if you wish to fight with all you have to live, or let go of your burden and drown peacefully. . . . In the end, it was not really a choice, but an instinct for survival."

After a year of physical therapy, he regained most elements of a normal life. He defied expectations by fathering two children. His right thigh, however, remains dead to the touch.

The accident ended his military career. Powell, who always planned to follow in his father's footsteps, was devastated. (Family legend recalls a letter that a young Michael Powell wrote to his father, then stationed in Vietnam: "I haven't decided yet if I want to be a lieutenant colonel or a lawyer.")

His sister Linda sees the accident's hidden benefit.

"I sometimes wonder if it didn't let him off the hook earlier," says the 36-year-old New York City actress. "It enabled him to find himself quicker. It would have taken him longer to figure out who he was in my father's field."

Powell does not disagree. He now calls the accident "the best thing that ever happened to me." Chiefly, he means that it led his old College of William & Mary girlfriend - Jane Knott - to his bedside and eventually to the altar. (Powell sometimes refers to her as "Jane, his wife," as in the "Jetsons" theme song.)

And though after his rehabilitation he knocked around Defense Department jobs for a couple of years, he eventually realized he had to break from the Army, he says. He got a Georgetown law degree and did stints in the Washington office of O'Melveny & Myers, an L.A.-based firm, and in the Department of Justice's antitrust division.

Internet gossip Matt Drudge and New Republic writer Andrew Sullivan have criticized the "nepotism" of Powell's political ascent; those who know him

insist that his father's name may have opened doors - he was pushed for the FCC by McCain, a Friend-of-Colin - but believe the younger Powell's ability took over from there.

As for Michael Powell, his response to the nepotism specter is essentially unchanged today as when it was broached nearly four years ago, when he joined the FCC:

"I'm sure there were a whole lot of people in this town that, when my name surfaced, they said, 'He must be getting this because he's the son of somebody,' " Powell told the Associated Press in 1998. "Personally, I really enjoy the fact that some people have underestimated expectations of me. That's just great because it is just running room. Sure, go ahead and underestimate me."

And, if Powell's political ascent seems rapid, supporters say, it's because he's had his foot on the gas since he put down his crutches:

"Life is short and there's no guarantees," Powell says. "I don't have time for negative people, I don't have time for an unhappy disposition or an unhappy outlook on life. I can taste the preciousness of life."

The FCC

Powell wants his record to speak for itself, and so far it has. But people are hearing different things.

He is emerging as a deregulatory chairman, and not surprisingly the commercial broadcasters like him. Recent rulings by his commission, for instance, will allow one of the four major television networks - ABC, CBS, NBC or Fox - to buy one of the smaller ones - UPN or the WB. Critics see this as another step toward corporate consolidation, which, they warn, will end only when one company owns everything.

"He has a disappointingly narrow view of the role that government has played in creating the marketplace and the diversity that is in the marketplace and in the mass media," says Andrew Schwartzman, president of the Media Access Project, a Washington telecommunications watchdog group. Schwartzman says he admires Powell and adds: "I would hope that every now and then as chairman, [Powell] will use his extraordinary intelligence and creativity as well as his bulletproof political position to take a difficult position on an issue."

Powell says his first thought in FCC decisions is always the consumer. He voted, for example, for Kennard's proposal to allow low-power radio stations, which was aimed at increasing the diversity of voices on the radio. Yet, he adds: "I believe government has the role and duty of proving the merits of intervention rather than the other way around. If I can't demonstrate with rigor the necessity of intervention, then the obligation of the government is to stay out."

Where Powell says he differs from previous Republican-led FCCs is on television and radio content: He says his liberal friends at law school

convinced him that "it's better to tolerate the abuses on the margins than to invite the government to interfere with the cherished First Amendment."

Last Tuesday, however, the FCC fined radio station KKMG in Pueblo, Colo., $7,000 for playing "The Real Slim Shady," a sexually explicit, profanity-laced song by rapper Eminem. The station played a cleaned-up version of the song, but the FCC nevertheless found KKMG guilty of "willfully broadcasting indecent language." The ruling left many in the radio industry wondering if the action signaled a return to the early '90s, when a Republican-led FCC stacked up $1.2,million in fines against shock jock Howard Stern.

In February, a group of black telecom lawyers gave a send-off party to Kennard at the swank Dupont Circle headquarters of WorldSpace, a satellite radio company.

Powell's presence turned the night into a de facto changing of the FCC guard.

Powell heaped praise on his predecessor, the first African American to head the FCC, and talked about America's third major revolution of the past few hundred years. In the first two - the agricultural and industrial revolutions - black people either "picked cotton" or were "legally segregated." In the Information Revolution now underway, he said, minorities have their first chance to take the lead.

Kennard followed, saying he had tried to provide "opportunity for people who don't have a voice in Washington."

The reaction to both men was respectful and warm, but the needle on the love-meter climbed perceptibly higher for Kennard.

"That's one assessment of it," Powell says. "I think it's probably realistic."

The subtext in the room echoed what was felt in some quarters of Washington: that Kennard, as a Democratic, had fought for the common man. And that Powell, as a Republican, would fight for The Man.

The sub-subtext was: Republicans are for whites; Democrats, for blacks.

Powell finds this ludicrous.

"I don't think there's anything about my race that says I have to be a Democrat."

Tom Hart, a longtime Washington telecom lawyer present at the Kennard farewell party, sees good and bad in Powell's beliefs, if they become FCC policies.

"The advantages are that [such policies] will likely continue the technological growth and expansion that have emerged over the last 10 years," he says. "But what it does in the midterm is curtail the new entry of small, typically minority, business enterprises." Without incentives and

some government protection, Hart says, the start-ups simply can't compete against the industry giants.

Jesse Jackson, addressing the annual convention of the National Association of Black Owned Broadcasters in Washington in March, criticized Powell for a laissez-faire attitude that eventually would limit black voices in broadcasting.

It is unclear, however, if Powell will even be at the FCC long enough to see any policies bear fruit. Though he was reconfirmed for a five-year term last month, some observers wonder if he won't be tapped to run for elective office or perhaps take a White House appointment before his FCC term expires. Powell will say only that he has "no such laid-out grand ambitions" for his career.

What is clear is how he sees his role at the FCC.

He tells a story about being buttonholed by a congressman shortly after accepting the chairmanship. Powell responded with rapid-fire force.

"I want you to be more than a good steward," the congressman told Powell. "I want you to be a champion."

"I told him, 'I'm not a champion. I'm paid to make this stuff work.',"

You might try a 48 inch telescopic antenna that incorporates a center load. Radio Shack sells them as a special order item. I have the same radio, and it can reach over 3 miles with the stock rubber duck antenna if I am transmitting to a base station antenna. The same radio with a 48 inch telescopic antenna will transmit 7 miles or more to a base station antenna. You can vary the antenna length according to range needs.

Dr. Mopar. That is called a love and hate relationship. Something happened to him when he was a kid. I wonder if he has ever done any time in the joint for this kind of behavior. Perhaps a look at the sex offender list on the web would be in order. All this pent up anger. Makes me wonder why the cb radio newsgroup is the recipient of this misplaced aggression. Actually he hates his daddy. I am sure you know this. I must go now. Is my radio working?

ANTIKEYCLOWN GROUP FAQ

Last revised - 06/18/2001

Q: What is a KeyClown?

A: A 'KeyClown', in a nutshell, is a CBer gone bad. The name is derived from the term 'keydown', which is the equivalent of a dragrace using illegal radio amplifiers. A keyclown can be recognized by his or her open and public disregard for FCC regulations, total disrespect for other CBers, and hostile aggression towards any form of criticism.

Q: What is an Anti-KeyClown?

A: An 'AntiKeyClown' is a legal CBer that actively confronts keyclowns on their own terms. Disrespect is countered with disrespect, hostility with hostility, etc. Any method or tactic used by the keyclown to harass legal CBers, intimidate proponents of legal operation, or dominate either the Citizen's Band or any other aspect of legal CB use, will be considered a fair and viable method or tactic for use against the keyclowns.

Q: Are the AntiKeyClown posts actually all the work of N8WWM? Or Sparky?
Or

Leland? Or...?

A: There are many AntiKeyClowns. Each Anti takes upon him or herself the role that is best suited to their talents and abilities. While one Anti may choose to remain 'behind the scenes', another will perform their duties as a spokesperson. Some wish not to be indentified, while others enjoy the freedoms of full exposure. An Anti need not identify him or herself as such, and may make only a minor contribution to the effort. This describes the majority of the AntiKeyClowns. Only a few have choosen to be visible.

Q: Why do you hate illegal/outlaw CBers?

A: AntiKeyClowns are not about hate. An Anti is typically a person that has

been offended, disturbed or victimized by the actions of keyclowns, and has chosen to take action instead of accepting defeat at the hands of outlaws.

Q: What do keyclowns do?

A: A keyclown generally ignores two important laws:

The first is by using radio frequency amplifiers with their CB radios. These amplifiers are usually of poor design and construction, and will emit powerful harmonics. These harmonics, or "splatter," interferes with broadcast radio and television, as well as other legal radio communications such as police, fire, ambulance and aircraft communications. It also disrupts the Citizen's Band on other channels, making the channel or band useless for several miles within the radius of the keyclown. Many times this disruption is done with the deliberate intention of "shutting down" legal CBers.

The second law involves the use of frequencies that are outside of the Citizen's Band, and can even intrude on the 10 and 12 meter Amateur Radio bands. The primary reason for doing this is because people like themselves have made the legal channels useless in their area.

The behavior of keyclowns, if left unchecked, may eventually lead to the elimination of the Citizen's Band altogether. As the number of keyclowns increases, so will the need for more bandwidth and more power. This is a "king of the hill" mentality, and anyone that operates legally is thrown off the hill. At some point in the future the keyclowns will become so loud and disruptive that the only way to stop them is to 'clear the board' by shutting down the Citizen's Band completely. We would like to prevent both from happening.

Q: So why don't you just make your point and then go away? You're being "rude" by contantly poking your nose where it doesn't belong.

A: The Anti's believe in the Golden Rule.

Q: But you're just riling up the illegals and making them angry. That's not being a responsible person.

A: Their actions and emotions are not our responsibility.

Q: Why don't you go back and clean up your own mess on the ham bands?

A: The AntiKeyClowns have nothing to do with the Amateur Radio Services. It
is true that some of the Anti's are hams, but it is also true that some of the keyclowns are hams as well. Amateur Radio has no more relevance to this subject than does saltwater fishing.

Q: But I'm a ham and I don't care what goes on on CB.

A: You should. Every year the "CB problem" gets worse, not better. More phoney export radios are flooding the market. More freebanders and confused truckers are showing up on 10 meters. We guarantee that if nothing is done, amateurs will be unwillingly "sharing" the 10 and 12 meter bands with illegal CBers in a very short time. And with the increase of illegal amps splattering into your home entertainment systems and other consumer devices, this is an issue that needs to be addressed not only by CBers and hams, but also by the general public.

Q: I support legal CB, but I do it quietly.

A: As stated before in this FAQ, each person will do what they feel is best for them. However, illegal radio operation is making the radio spectrum a very noisy place. In time, your quiet legal radio operation will be silenced by the keyclowns. This is what the Anti's see in the very near future, and it is what we are trying to prevent.

Q: You can't stop people from posting. It's perfectly legal to talk about illegal CB.

A: It is not our intent, nor can we prevent anyone from excercising their rights under the 1st amendment to the US Constitution.

Q: So why don't you go to a CB coffee break and harass people?

A: Our methods are diverse, but legal. We have noted the hostility of many of these illegal operators, and any attempt to provoke a group with another group would probably incite large-scale violence. Violence is not our intent, and would not benefit anyone. We would prefer to stand at a distance and collect information that can be used by the proper authorities.

Q: But I thought the law said I can own an export radio.

A: The FCC has issued a reminder about those HF transceivers ostensibly marketed for "amateur" use but actually designed and intended specifically for the so-called "freeband" radio operators who operate primarily in the 26 to 28 MHz frequency range. This notice, as well as all other FCC related material my be found at www.fcc.gov.

Q: Why can't I sell my CB amp or export radio on the newsgroup?

A: We cannot provide any legal advice except to suggest that anyone interested should read the FCC regulations. If you are in doubt as to how those regulations apply to you, consult an attorney, or email the FCC and they will provide a quick and authoritative answer to your question.

Q: But illegal CBers are just "bending the law." These laws are trivial.

A: The laws that are being "bent" can result in fines up to $75,000 and up to 1 year in prison. The punishment is not trivial, nor is the crime.

Q: The FCC doesn't enforce these laws, so why should I bother to obey them?

A: The FCC's recent lack of enforcement is no reason to think that they cannot enforce these laws at any time they please. That is a decision to be made by the FCC, not the AntiKeyClowns.

Q: It's civil disobedience. Like the Minutemen did during the Revolutionary War. Or Rosa Parks during the Civil Rights protests.

A: We are, and always have been, open-minded to any argument providing moral justification for this illegal behavior. Unfortunately, no one has provided such an argument.

Q: Are you flamers? Trolls?

A: Yes and no. We flame and troll as necessary. Keyclowns are the only targets, and only keyclowns that have previously trolled or flamed others.

Q: But you're screwing up the newsgroup.

A: Keyclowns have been "screwing up" the Citizen's Band for several years. We exist as a consequence of their behavior. Please do not confuse 'cause'

(the keyclowns) and 'effect' (the AntiKeyClowns). Without keyclowns there would be no AntiKeyClowns.

Q: Your anti-illegal CB postings are useless.

A: Perhaps. Perhaps not.

Hi. I have a working Midland 13-885 CB radio. Manufactured in 1971
and in very good condition including all knobs. I was made various
offers for this radio but refused to sell it until I can determine a
fair value for it. Can anyone help in determing a ballpark value?

Thanks

Oh No, I'm doing something illegal?, "how too" discussions??? Wow, I didn't know that mere discussion was illegal. Boy, I tell ya, these guys (two, three, four one loses track when they are changing there name every other second) just don't get it, you can go to any keydown, cb break, hamfest and illegal activities will be discussed.
You can not stop talk, I have never offered for sale (maybe give away) or to build or modify any equipment (unlike Frank and Doug who have).
So keep flooding, spewing vile filth on subject lines and you can be turned in for violating the ISP tos.
At least Prozac, Helmut Weenie, Capn Jack, Deep Blue what ever he's going by this week doesn't spew filth, he might fan the flames, but you can't accuse him of being like you two.

Hey,
I never left, I just said I would post now
and then, still will do that. I have been reporting
the most recent post, but far to busy with job
and summer time fun.
Went to a Buell function a week back, meet the
state rep, western rep and the western rep for Harley.
He was impressed with the way I had customized my bike and how fast it was,
so that was cool.
Just been to busy biking and working to have time
to post, but do read and turn Frank and Doug in
as violations will allow.
Going to Vegas this weekend on a Fatboy with another
couple. I'm sure the demented minds of Frank and his little
buddy will come up with some sort of colorful statement.
But it should be a great ride, figure to do around 650 to
725 miles in a 12 hour period, suites at the Venetian
(Nice!!)

Who said that I am not a CBer. Just because I also have a few extra licences, (Restricted Radio Operators, Air Mobil, Maritime Mobil and Ham) and a house full of equipment. Not to mention a yard full of antennas that does not mean that I am not a Chicken Bander also. Nothing worse then trying to land a plane ILS when some dirty amped CBers harmonic gets in to your plains com system.

You have got some nerve, Landshark, coming back in here after it was proven to everyone's satisfaction that you had been posting in TS/TV groups looking for shemale prostitutes.

Guess you're in good company with Phoneman who also solicits prostitutes on Usenet. Only hitch is that he likes real biological women.

WOO HOOO! Typical keyclown incompetence at work. This reminds me of the time Dennis O. thought he had Mark Fullers callsign and started making threats to some ham he decided was Mark.

More recently, the newsgroup retard Twistedhed decided some guy named Glenn Sparks was Sparky and began posting his name all over the net.

Now THIS boner! Wow, you guys NEVER disappoint us. THIS is why we are here. Your stupidity entertains us GREATLY. It's....better than TV!

Check it out: you have pirated the call of a ham who happens NOT to be *your* Frank Gilliand of Spokane. So post away, dumbasses! Give it your best shot. The more you post, the more they can use against you when when the real N7VCF and Cotse Abuse gets involved. No, wait, maybe should we say..."oh nooooo! don't post with THAT callsign! please! Don't post with that callsign!"

LOL. What idiots. We love you!

In both instances you have the opportunity to have a trial-de-novo,
where the FCC or IRS must prove it's allegations. Since the proof is
almost always irrefutable (failure to pay taxes, radio direction
finding), few ever take that opportunity.

I don't think it will be as quiet as you say. Of course this is all a matter of opinion, but DX isn't half of the illegal community. There are plenty that just like to run power, and the keydown is a prime example. There will be those that just want to key on the mudducks, and then there will be several trying to pump gobs of power to see how far their ground wave can go. And some DXers will hang around because they get duped by phoneys. I DF'ed an illegal operator in Idaho that was talking to Seattle and claiming he was in NY. No, I really don't think it is going to be all that quiet.

>What Hams need to do is spend their efforts where it will do some good,

I agree.

ANTIKEYCLOWN GROUP FAQ

Last revised - 06/18/2001

Q: What is a KeyClown?

A: A 'KeyClown', in a nutshell, is a CBer gone bad. The name is derived from the term 'keydown', which is the equivalent of a dragrace using illegal radio amplifiers. A keyclown can be recognized by his or her open and public disregard for FCC regulations, total disrespect for other CBers, and hostile aggression towards any form of criticism.

Q: What is an Anti-KeyClown?

A: An 'AntiKeyClown' is a legal CBer that actively confronts keyclowns on their own terms. Disrespect is countered with disrespect, hostility with hostility, etc. Any method or tactic used by the keyclown to harass legal CBers, intimidate proponents of legal operation, or dominate either the Citizen's Band or any other aspect of legal CB use, will be considered a fair and viable method or tactic for use against the keyclowns.

Q: Are the AntiKeyClown posts actually all the work of N8WWM? Or Sparky?
Or

Leland? Or...?

A: There are many AntiKeyClowns. Each Anti takes upon him or herself the role that is best suited to their talents and abilities. While one Anti may choose to remain 'behind the scenes', another will perform their duties as a spokesperson. Some wish not to be indentified, while others enjoy the freedoms of full exposure. An Anti need not identify him or herself as such, and may make only a minor contribution to the effort. This describes the majority of the AntiKeyClowns. Only a few have choosen to be visible.

Q: Why do you hate illegal/outlaw CBers?

A: AntiKeyClowns are not about hate. An Anti is typically a person that has

been offended, disturbed or victimized by the actions of keyclowns, and has chosen to take action instead of accepting defeat at the hands of outlaws.

Q: What do keyclowns do?

A: A keyclown generally ignores two important laws:

The first is by using radio frequency amplifiers with their CB radios. These amplifiers are usually of poor design and construction, and will emit powerful harmonics. These harmonics, or "splatter," interferes with broadcast radio and television, as well as other legal radio communications such as police, fire, ambulance and aircraft communications. It also disrupts the Citizen's Band on other channels, making the channel or band useless for several miles within the radius of the keyclown. Many times this disruption is done with the deliberate intention of "shutting down" legal CBers.

The second law involves the use of frequencies that are outside of the Citizen's Band, and can even intrude on the 10 and 12 meter Amateur Radio bands. The primary reason for doing this is because people like themselves have made the legal channels useless in their area.

The behavior of keyclowns, if left unchecked, may eventually lead to the elimination of the Citizen's Band altogether. As the number of keyclowns increases, so will the need for more bandwidth and more power. This is a "king of the hill" mentality, and anyone that operates legally is thrown off the hill. At some point in the future the keyclowns will become so loud and disruptive that the only way to stop them is to 'clear the board' by shutting down the Citizen's Band completely. We would like to prevent both from happening.

Q: So why don't you just make your point and then go away? You're being "rude" by contantly poking your nose where it doesn't belong.

A: The Anti's believe in the Golden Rule.

Q: But you're just riling up the illegals and making them angry. That's not being a responsible person.

A: Their actions and emotions are not our responsibility.

Q: Why don't you go back and clean up your own mess on the ham bands?

A: The AntiKeyClowns have nothing to do with the Amateur Radio Services. It
is true that some of the Anti's are hams, but it is also true that some of the keyclowns are hams as well. Amateur Radio has no more relevance to this subject than does saltwater fishing.

Q: But I'm a ham and I don't care what goes on on CB.

A: You should. Every year the "CB problem" gets worse, not better. More phoney export radios are flooding the market. More freebanders and confused truckers are showing up on 10 meters. We guarantee that if nothing is done, amateurs will be unwillingly "sharing" the 10 and 12 meter bands with illegal CBers in a very short time. And with the increase of illegal amps splattering into your home entertainment systems and other consumer devices, this is an issue that needs to be addressed not only by CBers and hams, but also by the general public.

Q: I support legal CB, but I do it quietly.

A: As stated before in this FAQ, each person will do what they feel is best for them. However, illegal radio operation is making the radio spectrum a very noisy place. In time, your quiet legal radio operation will be silenced by the keyclowns. This is what the Anti's see in the very near future, and it is what we are trying to prevent.

Q: You can't stop people from posting. It's perfectly legal to talk about illegal CB.

A: It is not our intent, nor can we prevent anyone from excercising their rights under the 1st amendment to the US Constitution.

Q: So why don't you go to a CB coffee break and harass people?

A: Our methods are diverse, but legal. We have noted the hostility of many of these illegal operators, and any attempt to provoke a group with another group would probably incite large-scale violence. Violence is not our intent, and would not benefit anyone. We would prefer to stand at a distance and collect information that can be used by the proper authorities.

Q: But I thought the law said I can own an export radio.

A: The FCC has issued a reminder about those HF transceivers ostensibly marketed for "amateur" use but actually designed and intended specifically for the so-called "freeband" radio operators who operate primarily in the 26 to 28 MHz frequency range. This notice, as well as all other FCC related material my be found at www.fcc.gov.

Q: Why can't I sell my CB amp or export radio on the newsgroup?

A: We cannot provide any legal advice except to suggest that anyone interested should read the FCC regulations. If you are in doubt as to how those regulations apply to you, consult an attorney, or email the FCC and they will provide a quick and authoritative answer to your question.

Q: But illegal CBers are just "bending the law." These laws are trivial.

A: The laws that are being "bent" can result in fines up to $75,000 and up to 1 year in prison. The punishment is not trivial, nor is the crime.

Q: The FCC doesn't enforce these laws, so why should I bother to obey them?

A: The FCC's recent lack of enforcement is no reason to think that they cannot enforce these laws at any time they please. That is a decision to be made by the FCC, not the AntiKeyClowns.

Q: It's civil disobedience. Like the Minutemen did during the Revolutionary War. Or Rosa Parks during the Civil Rights protests.

A: We are, and always have been, open-minded to any argument providing moral justification for this illegal behavior. Unfortunately, no one has provided such an argument.

Q: Are you flamers? Trolls?

A: Yes and no. We flame and troll as necessary. Keyclowns are the only targets, and only keyclowns that have previously trolled or flamed others.

Q: But you're screwing up the newsgroup.

A: Keyclowns have been "screwing up" the Citizen's Band for several years. We exist as a consequence of their behavior. Please do not confuse 'cause'

(the keyclowns) and 'effect' (the AntiKeyClowns). Without keyclowns there would be no AntiKeyClowns.

Q: Your anti-illegal CB postings are useless.

A: Perhaps. Perhaps not.

I passed the General written element, too... Just working on the
Morse...

But then again, you're probably not interested.

Yes.

Apparently slurp.net has been having some problems getting their news
servers synched, and some posts are coming in after their respective
responses...

It's no fault of my own, I'm just glad Netscape is able to reorganize
things on the fly. ::grin::

2183. question about RCI 2950 modification

Newsgroup: rec.radio.cb
Date: 2001-06-19 07:43:20 UTC
From: Valentin 30IR976 <radiotito@yahoo.com>
Message-ID: <3B2F0298.4C434491@yahoo.com>
Source record: 86273

Hello people.
I would like to know one thing about the frequency modification of Ranger RCI-2950. I would like to make this mod to expand the cover to 26 MHz - 29.7 MHz.:

1) Remove the case. It will be a small PC board immediately behind the front panel.

2) Locate "J2". There will be a jumper on pins P3 and P4.

3) Remove this jumper to expand coverage to 26 MHz - 29.7 MHz.

4) After removing the jumper, press the CPU reset button (located below J2).

OK, I have not tested this mod yet, but would like to know what to do if once I would have made the mod, I would go back to the "normal freq." and quit expansion 26-28 MHz: Should I put again junper J2.

Tnx in advance...

Tito

>THIS IS A TEST..A TEST TO SEE HOW MANY TIMES*FRANK* WILL FORGE ME.
> BTW,LITTLE BUDDY..STILL GONNA TAKE MY PIC FOM YOUR FAVORITRE RIFLE SITE ?

No, a friend talked me out of pointing a rifle at your head. I am going to use the AT-1 mounted on a blank stock instead. But after today I might not even do that. Your frothing on the computer today is almost satisfaction enough for me to overlook your indiscretions. Almost. But since I have already made arrangements to visit a friend in Akron for a few days, I don't feel like I should waste the opportunity. Do you?

BTW, I'm not N7, and I do not have a newsreader account. If you got that info from Curt, he was mistaken.

So it seems that we may both owe each other apologies. I've missed
things you've posted, and you've probably missed things I've posted...

After looking into what you posted concerning acts of congress.. yes, it
seems that the FCA, an Act of congress, is in and of itself a Law.

The individual Rules outlined within that act are not Laws in and of
themselves, but part of the whole that is the FCA.

Perhaps therein is where the confusion lies?

It's not illegal to mod this radio, if it is to be used on the 10 and 12
meter bands by a licensed HAM.

I think it is in the definition of 'law'. A law, as per the
dictionary, is any rule, regulation, order, restriction, etc. made by
a government that is to be obeyed and can be enforced. A law does not
need to identify itself as such, 'law' is just a classification: I
have a Mannesmann Tally 906 sitting right beside me. There is nothing
on it that says it's a printer, but that doesn't mean it's -not- a
printer.

I think some people are giving more importance to the details of law
than they are to the actual intent. Please read again the definitions
I posted and try to see my point.

2190. Anti-KeyClown FAQ

Newsgroup: rec.radio.cb
Date: 2001-06-19 08:54:54 UTC
From: AntiKeyClown Webmaster <webmasterservices@www.antikeyclown.com>
Message-ID: <3b2f054e$1@news2.mibx.net>
Source record: 86276

Due to net congestion we are posting this FAQ via alternate servers. Thankyou.

ANTIKEYCLOWN GROUP FAQ

Last revised - 06/18/2001

Q: What is a KeyClown?

A: A 'KeyClown', in a nutshell, is a CBer gone bad. The name is derived from the term 'keydown', which is the equivalent of a dragrace using illegal radio amplifiers. A keyclown can be recognized by his or her open and public disregard for FCC regulations, total disrespect for other CBers, and hostile aggression towards any form of criticism.

Q: What is an Anti-KeyClown?

A: An 'AntiKeyClown' is a legal CBer that actively confronts keyclowns on their own terms. Disrespect is countered with disrespect, hostility with hostility, etc. Any method or tactic used by the keyclown to harass legal CBers, intimidate proponents of legal operation, or dominate either the Citizen's Band or any other aspect of legal CB use, will be considered a fair and viable method or tactic for use against the keyclowns.

Q: Are the AntiKeyClown posts actually all the work of N8WWM? Or Sparky?
Or

Leland? Or...?

A: There are many AntiKeyClowns. Each Anti takes upon him or herself the role that is best suited to their talents and abilities. While one Anti may choose to remain 'behind the scenes', another will perform their duties as a spokesperson. Some wish not to be indentified, while others enjoy the freedoms of full exposure. An Anti need not identify him or herself as such, and may make only a minor contribution to the effort. This describes the majority of the AntiKeyClowns. Only a few have choosen to be visible.

Q: Why do you hate illegal/outlaw CBers?

A: AntiKeyClowns are not about hate. An Anti is typically a person that has been offended, disturbed or victimized by the actions of keyclowns, and has chosen to take action instead of accepting defeat at the hands of outlaws.

Q: What do keyclowns do?

A: A keyclown generally ignores two important laws:

The first is by using radio frequency amplifiers with their CB radios. These amplifiers are usually of poor design and construction, and will emit powerful harmonics. These harmonics, or "splatter," interferes with broadcast radio and television, as well as other legal radio communications such as police, fire, ambulance and aircraft communications. It also disrupts the Citizen's Band on other channels, making the channel or band useless for several miles within the radius of the keyclown. Many times this disruption is done with the deliberate intention of "shutting down" legal CBers.

The second law involves the use of frequencies that are outside of the Citizen's Band, and can even intrude on the 10 and 12 meter Amateur Radio bands. The primary reason for doing this is because people like themselves have made the legal channels useless in their area.

The behavior of keyclowns, if left unchecked, may eventually lead to the elimination of the Citizen's Band altogether. As the number of keyclowns increases, so will the need for more bandwidth and more power. This is a "king of the hill" mentality, and anyone that operates legally is thrown off the hill. At some point in the future the keyclowns will become so loud and disruptive that the only way to stop them is to 'clear the board' by shutting down the Citizen's Band completely. We would like to prevent both from happening.

Q: So why don't you just make your point and then go away? You're being "rude" by contantly poking your nose where it doesn't belong.

A: The Anti's believe in the Golden Rule.

Q: But you're just riling up the illegals and making them angry. That's not being a responsible person.

A: Their actions and emotions are not our responsibility.

Q: Why don't you go back and clean up your own mess on the ham bands?

A: The AntiKeyClowns have nothing to do with the Amateur Radio Services. It
is true that some of the Anti's are hams, but it is also true that some of the keyclowns are hams as well. Amateur Radio has no more relevance to this subject than does saltwater fishing.

Q: But I'm a ham and I don't care what goes on on CB.

A: You should. Every year the "CB problem" gets worse, not better. More phoney export radios are flooding the market. More freebanders and confused truckers are showing up on 10 meters. We guarantee that if nothing is done, amateurs will be unwillingly "sharing" the 10 and 12 meter bands with illegal CBers in a very short time. And with the increase of illegal amps splattering into your home entertainment systems and other consumer devices, this is an issue that needs to be addressed not only by CBers and hams, but also by the general public.

Q: I support legal CB, but I do it quietly.

A: As stated before in this FAQ, each person will do what they feel is best for them. However, illegal radio operation is making the radio spectrum a very noisy place. In time, your quiet legal radio operation will be silenced by the keyclowns. This is what the Anti's see in the very near future, and it is what we are trying to prevent.

Q: You can't stop people from posting. It's perfectly legal to talk about illegal CB.

A: It is not our intent, nor can we prevent anyone from excercising their rights under the 1st amendment to the US Constitution.

Q: So why don't you go to a CB coffee break and harass people?

A: Our methods are diverse, but legal. We have noted the hostility of many of these illegal operators, and any attempt to provoke a group with another group would probably incite large-scale violence. Violence is not our intent, and would not benefit anyone. We would prefer to stand at a

distance and collect information that can be used by the proper authorities.

Q: But I thought the law said I can own an export radio.

A: The FCC has issued a reminder about those HF transceivers ostensibly marketed for "amateur" use but actually designed and intended specifically for the so-called "freeband" radio operators who operate primarily in the 26 to 28 MHz frequency range. This notice, as well as all other FCC related material my be found at www.fcc.gov.

Q: Why can't I sell my CB amp or export radio on the newsgroup?

A: We cannot provide any legal advice except to suggest that anyone interested should read the FCC regulations. If you are in doubt as to how those regulations apply to you, consult an attorney, or email the FCC and they will provide a quick and authoritative answer to your question.

Q: But illegal CBers are just "bending the law." These laws are trivial.

A: The laws that are being "bent" can result in fines up to $75,000 and up to 1 year in prison. The punishment is not trivial, nor is the crime.

Q: The FCC doesn't enforce these laws, so why should I bother to obey them?

A: The FCC's recent lack of enforcement is no reason to think that they cannot enforce these laws at any time they please. That is a decision to be made by the FCC, not the AntiKeyClowns.

Q: It's civil disobedience. Like the Minutemen did during the Revolutionary War. Or Rosa Parks during the Civil Rights protests.

A: We are, and always have been, open-minded to any argument providing moral justification for this illegal behavior. Unfortunately, no one has provided such an argument.

Q: Are you flamers? Trolls?

A: Yes and no. We flame and troll as necessary. Keyclowns are the only targets, and only keyclowns that have previously trolled or flamed others.

Q: But you're screwing up the newsgroup.

A: Keyclowns have been "screwing up" the Citizen's Band for several years.

We exist as a consequence of their behavior. Please do not confuse 'cause' (the keyclowns) and 'effect' (the AntiKeyClowns). Without keyclowns there would be no AntiKeyClowns.

Q: Your anti-illegal CB postings are useless.

A: Perhaps. Perhaps not.

2191. Re: question about RCI 2950 modification

Regardless of the terms, or the etymology thereof, the FCC "rules" as listed in the FCA are enforceable by the government. I simply take umbrage with the idea of people using the word "illegal" to describe a linear amplifier. Owning a Linear in and of itself is not illegal. Using that Linear on bands for which you are not licensed, or on bands on which its use is prohibited, is illegal.

So there really is no such thing as an "illegal linear"... There really is such a thing as the use of a linear not in accordance with the FCC Rules. The amp isn't illegal. Possession of the amp isn't illegal. It's use on CB is.

Why would a Ham in their right mind post in a CB NG? Maybe he realized the error in his ways and returned to his roots. Maybe because he wants to piss off the AntiKeyClown folks. Maybe the people he talks to on CB know more about communications. Maybe because he realized that it isn't that hard to study the questions of a test and have no clue what they actually mean. Maybe he just got his ticket so in the event he gets caught with a box he can tell them it's for 10 meters. Maybe one day you can ask me over a Hefe Weizen. To the people that try to act as frequency police.....fuck you. To the people that mind their own business...when you get a chance, bash an AntiKeyClown.

Oh My...Oh My...Buckeye.

Again I agree, and I think so will most everyone else.

I like to give people the benefit of the doubt when they say 'illegal
amp', since the amp was probably manufactured, advertised, sold, and
used illegally. Since few people in this newsgroup ever make a topic
of discussion about collecting amps for the sake of mere possession,
(except maybe Landshark), it's probably a good guess that the amp
being discussed is probably being used illegally. So I consider the
term 'illegal amp' to mean an amp that is being or will be used
illegally.

Personally, I have a small collection of very old home-brew radio
stuff, and it includes a couple amps. Nothing I would plug in (for
safety's sake), but it's really a collection of home-brew engineering.
Ever see the loading coil wound around the transmitter tube? I'm not
kidding, someone actually mounted the tube (a T-55) -inside- a
vertical loading coil. Can't throw that one away...

I don't think

"That is the most truthful and intelligent statement your balding noggin has ever claimed here."

it will be as quiet as you say.

"And of course, you are wrong as usual."

Of course this is all a matter of opinion,

"Yep. And yours is always wrong.Just more proof you are a young 'un or a newbie and you definitely are experiencing your first DX drenched solar cycle."

but DX isn't half of the illegal community.

"Please provide statistics and the source to cite this fallacy you claim."

There are plenty that just like to run power, and the keydown

"THE keydown? Which one are you referring to?"

is a prime example. There will be those that just want to key on the mudducks, and then there will be several trying to pump gobs of power to see how far their ground wave can go. And some DXers will hang around because they get duped by phoneys.

"You mean that card I received from Indonesia was sent from Cleveland, mailed to Indonesia, stamped, sent back to the joker, then put in my mailbox? Oh, ok."

I DF'ed an illegal operator in Idaho that was talking to Seattle and claiming he was in NY.

"Sure you did."

No, I really don't think it is going to be all that quiet.

"Once again, no one needs point out your lack of knowledge concerning propagation. You take care of that all by your lonesome quite fine."

S3Buell@PacBell.Net (The Landshark)

Hey,
I never left, I just said I would post now and then, still will do that. I have been reporting the most recent post, but far to busy with job and summer time fun.

Went to a Buell function a week back, meet the state rep, western rep and the western rep for Harley. He was impressed with the way I had customized my bike and how fast it was, so that was cool.

Just been to busy biking and working to have time to post, but do read and turn Frank and Doug in as violations will allow.

Going to Vegas this weekend on a Fatboy with another couple. I'm sure the demented minds of Frank and his little buddy will come up with some sort of colorful statement. But it should be a great ride, figure to do around 650 to 725 miles in a 12 hour period, suites at the Venetian (Nice!!)

Landshark

--
"A day without riding a Buell,
is like a day without Sunshine"
Quoted from Ferris Bueller day off.
Not.
99 Ford F-150
98 Buell S3 Thunderbolt
83 Honda CB1100F

Have fun in Vegas, Shark. Never stayed at the Venetian before. Last time it was the Excalibur. Lots of nice riding roads when you get north of the city towards the Lake and near the washes. If you get a chance, check out a place near Government wash. Camped on a high rock formation jutting out into the lake, absolutely awesome. Hope the weather holds. Got a cb on that bike, or is it just built for speed?

I was getting pretty depressed, after learning of the demise of the great government operative, Steve Anderson, and his fantastic comedy show: *The Militia Private's Flying Circus*. So while tuning around the radio dial last night, I heard some activity on 3.860 MHz.

Briefly, this is where the REAL neo-nazi's and kooks from 3.950 MHz took off to. They got scared of Riley, and decided to start their own net called: *The Mostly Brew Net*. Anyway, they have spent their ENTIRE lives consumed with their ex-buddies on 3950! Uncle Boob Turncoat-KN4CF, Tommy Tubes-WB2CLN and other militia wannabe's are parked right there every evening from 9 pm to ?? CDT, discussing their favorite topic: "FREQUENCY 'X'"!

Well,a few weeks ago, one of the trailer park hams from the militia net decided to unload with a "nuclear bomb in Oklahoma" rumor. Now THAT was interesting. But last night took the cake! CLN had a special announcement at 10 pm CDT in which he told THE WORLD his wife had a chemotherapy induced dream in which CLN was MURDERED by someone from 3950! CLN took this drug induced dream SO SERIOUSLY, that he notified local police authorities of this MASSIVE conspiracy against his life! What made it even MORE hilarious is Boob and the other nut cases went along with CLN on this, even though it was nothing more than rumor mongering!!

Whomever the accusee is, I hope they find a capable lawyer to sue the fucking pants off of CLN for filing a FALSE police report!!

Greetings to all, and apologies for the naievity inherent in this question.....

Is CB still used by long distance drivers/truckers/etc? And, in particular, is it common for them to swap information on the location of state troopers and the like, or is all of that nothing more than a dated movie fantasy?

What is the common channel that is used for any such communications?

Many thanks for any advice.

Just because one is a CB'er, doesn't mean you can't run ham bands too. I have a ham ticket, but use CB also. If I get tired of one, I go to the other, and vice versa. True, some CB'ers run extremely overpowered stations, and they bleed 40 up and 40 down. There are a few out there who make sure that if they are running power over 4w, they make sure it's clean! (I myself run a "sweet sixteen" amp in my mobile, but can only recount maybe two times I have actually used it at full power. When I transmit on Ch 34 or whatever channel I use, I stay on that channel. You don't hear me on any other frequency.)

I couldn't find a FAQ on this group, so I'll just jump in.

I bought my first CB, a handheld unit, a couple of months ago and found just listening to be so useful when I'm driving, that I bought a new one that I've mounted in my car. So clearly I'm a newbie on CB's and this group.

I now want to start using the CB more. You know... actually TALKING on it as well as listening. But like the internet, CB's have their own sets of language and etiquette. Can anybody give me some guidelines on how to avoid making a fool of myself on the CB?

Thanks,
Bob

No offense, but these headers look just a little TOO close to make your forgery claim stand... Granted, I agree with what someone else posted, that the original finder has too much time on there hands. The simple fact remains, that it does look to me that you in fact DID do the posting... Deny it or not as you will... Not that I really care, but my guess would be that you are not that stupid to have actually done such a thing, and that it is in fact the type of thing that is posted to that particular newsgroup, STORIES, not actual life events... You shouldn't be embarrassed by what is probably a fantasy of yours... Everyone has them, just not many people have the balls to admit to whatever they may be... In any case, I wish you a good day, and hope that some day you get over your embarrassment.

I'm not a fan of those mini radios, but I ran into a Colt 357A today. What a great little radio! Receive sensitivity and channel seperation is almost as good as a crystal rig. If anyone else finds one, let me know, I might buy it.

WADR Power, some fantasies are healthy and others are not. Incest,
whether it be fantasy or reality, is sick. Forget all the name-calling
and shit-tossing in this ng, even forget everything that has been said
about Landshark. All of that is trivial compared to fostering
fantasies about incest. Whoever is the author of that story really
needs to seek out some mental health professionals.

Tim, Your problem is you don't understand what an export amp is. Yes they can Export there Amps, they cannot sell Export Amps in the Usa. But they can sell "Type Accepted" amps for Export these are not Davemades, or Xforce, or Nonames which are non type accepted amps these are legal Ham amps which is the same as Exporting a car overseas. They aren't allowed to sell any kind of amp they want to Tim. Just because you are ignorant to the true facts doesn't mean I am not telling the truth. Why don't you e-mail the FCC and ask them. Don't take old Prozac's word for it E-mail the FCC and post the results here.
You can shut me up and p[rove me wrong with 1 simple email. hell tell them you work for Davemade and want to export a few amps overseas and you want to know how to go about it. Ill be waiting for the e-mail reply. Otherwise shut the fuct up Until you know what you are talking about.

Source record: 86234

proof? if i had no life, no girlfriend, and no friends period i may feel like sitting here and looking at hours of archived usenet messages to find the ones when you went on your forging tirade but but i am just getting off of work and could really careless. you know you did it and i know you did it so whats the point. i'll be damned if i waste my time to prove something so stupid to a bunch of people on here that i dont care about eqaully as much. this news group is you guys life not mine. leland, hows your cb radio today? oh thats right i forgot you dont even use cb your just here to cause trouble.

"Brought to his attention not only here by several people, but in the amateur forums as well."

and you forgot to tell me how i got burned last time,

"As he fails to answer any questions put to him these days. He is beginning to realize he's his own worst enemy. He has no answers. About anything. Never did."

aside from you entering my email in the fag websites nothing ever happened or did i just not notice it. and why do you always associate me with twistedhed?

"Because he loathes me for exposing him for what he is and will take a shot anywhere he can. Because he can't fathom having any moxy himself and has deep seeded resentment towards those who do and don't give a flying leap. He took your page and my article as justification for his own behavior, as did his two pals. Openly and proudly speak of shooting DX, and you're automatically convicted as an amp using criminal..heheheh!"

i dont know the man aside from what i read here and from what i read here he seems to be a cool guy thats just tired of yalls shit like most everybody here that used to contribute and take away from this group.

"Everyone on this group was cool until this trash started. My favorite thing was to watch a few of these guys go round and round on a great debate, such as the one on what distinguished an amps class and why it was so, and the whole "true linearity" thing. Hell, I learned to wire a mic here, and no one ever gave me directions to deliberately destroy the thing, as these clowns have done to so many newbies. I was asked for a month after how the mic was working."

leland, there is a difference. YOU DID forge post with my name and addy and there is permenant records and proof of that.

If you want to buy Twisted's snake oil, well you're going to have to drink it sooner or later. So go ahead and post your poof. Twisted can't come up with any and neither will you since there is none.

"Twisted doesn't need any. Ain;t just the hammie rooms anymore that are wise to your tricks Leland, the cbers are hip too. Serves you right for the disdain and contempt you always display in here."

Tim Go talk someone a new asshole, You post no proof, If you want to say he is guilty with no proof you know what that makes you look like. Take 10 minutes out of your busy day and post the proof otherwise why bring it up. Ill tell you why because you think if you say it it makes it so. I say Offer the proof or shut up about it It is real easy. Like no one else works, has a women or many other hobbies. If you make the time to say he is gulty Post it to make him look bad otherwise you are making yourself look bad and are a 1st Class Liar. I say the ball is in your court.

This info has been sent to the FBI as well as the FCC, as well as the ISP of the posting Host. If you remember the Chris Marquis case I think they will find this very interesting. Specially anything with the Death threats. Now you did get carried away! Calling each other names etc is one thing death threats are another and will be taken very very seriously. I hope you had fun while it lasted.

David wrote:
>Is CB still used by long distance >drivers/truckers/etc?

Yes - virtually every 18-wheeler, whether driven by an owner-operator or by a company driver, has a CB antenna. (Also, truck stops are the best places to shop for CB radios, antennas, etc. - especially at Petro.)

>And, in particular,
>is it common for them to swap information >on the location of state troopers

Very. You'll get lots of information about troopers - plus about traffic hazards, congestion ahead, etc.

>What is the common channel that is used >for any such communications?

19 is where most truckers are.

Timmy, Ham amps are not illegal. Just your illegal Keyclown amps. And you can try to export anything that is illegal until that is you get caught. But you know as well as the rest the cb amps are not being exported they are being sold right under your noses. But if you want to play stupid and think they are we won't tell anyone.!

Yep, it is still used for that, like it was in the past, and even more today. Channel 19 IS the freeway channel and other roads to find out what IS going on. If you live in the land of fruits & nuts and Govt. caused power shortages, I think the north-south routes use CH. 17 instead (correct me if I'm wrong).
But any other road or place 19 IS the place to be!
Dave!!!!!!!!!!!

"David M Rowell" <DR@DavidMRowell.com> wrote in message news:gFKX6.10988$hU3.161325@news03.micron.net...
Greetings to all, and apologies for the naievity inherent in this question.....

Is CB still used by long distance drivers/truckers/etc? And, in particular, is it common for them to swap information on the location of state troopers and the like, or is all of that nothing more than a dated movie fantasy?

What is the common channel that is used for any such communications?

Many thanks for any advice.

I hear you here, as well...

I've got a Palomar 225 and an Elite 400. Why, do you ask? I'm not going to be a Technician class operator forever. The only thing "holding me back" is the Morse.. I've already passed the written General class element. (Dyslexia sucks!) I've got them for use on 10 and 12 meters.

Is it illegal for me to own them? Nope. Are they connected to a power source? Nope. Are they hooked to a radio? Nope. Just waiting for the day when I can use them for what they were originally designed for.. 10 meter operation.

They're not illegal amps.

If I have a repair/optimization question, do you honestly think other HAMs in their respective newsgroups will answer there? Probably not. I wouldn't. There are quite a few EXCELLENT CB operators here in this group, who do know how to repair & fix these things, and might be able to fill in the holes when my own technical knowledge fails me.

There are legitimate reasons for owning and running these amps. There are legitimate reasons for asking about repairs/optimizations here on this newsgroup, as well.

-SSB

Dave, you got me thinking on this one. I have worked in two-way radio (VHF/UHF/trunking) and most of my work was on UHF with some on high-band VHF. One tiny thing most folks overlook. Some interstate truckers are using low-band VHF. I have not worked on any of the rigs and can't give you much information. The frequencies used are above 30 MHz, but much closer to 30 MHz than 50 MHz. They use repeaters, much like the UHF gang, but it is capable of very long distance. Without skip, they should easily obtain well over 100 miles to a repeater (how much, I'm not sure). I know the old GE units on high-band would run 50 watts easily. I don't know the power limits, but 50 watts on low-band VHF will give you a lot of range. Consider that the repeater they would be working through would not have a simple ground-plane or 1/2 wave or 5/8 wave antenna. There is at least one low band VHF repeater in our area - and that is atop Bristol Mountain. Likely, the thing will be a colinear array with 6 dBd gain or more (the UHF repeaters run much more). This gives the repeater real good ears, not unlike running a good size beam on CB. This, coupled with a couple of hundred watts at the repeater end and at least 50 watts at the truck will give the trucker range which can reach across a few states (at least here in the northeast - truck to truck might extend 200 - 300 + miles. Of course, Texans would simply laugh! 300 miles would be tiny there). I know that our shop in Rochester, NY, running through a UHF repeater could be heard in Horseheads, NY, which is down in the Southern Tier. Low band VHF has a lot greater range than that. Most of the users have vacated to higher frequencies, however. The reason is simple - skip. Unless they absolulely need the distance, high-band vhf or uhf will do the job nicely without interference.

73 from Rochester, NY
Jim

In article <3B300272.B9A66C18@spam.me.not>, Sideband says...
>I've got a Palomar 225 and an Elite 400. Why, do you ask? I'm not going
>to be a Technician class operator forever. The only thing "holding me
>back" is the Morse.. I've already passed the written General class
>element. (Dyslexia sucks!) I've got them for use on 10 and 12 meters.

You have another transceiever that covers 160-10? Or are you planning on using your General on 10/12 meters only?

>Is it illegal for me to own them? Nope. Are they connected to a power
>source? Nope. Are they hooked to a radio? Nope. Just waiting for the day
>when I can use them for what they were originally designed for.. 10
>meter operation.

One problem. It's obvious you have never worked 10 or 12 meters. Amps are not required on these bands. There's no fighting to "get down" on anyone or "plug ears". Propagation is such that a regular 100W PEP works fantastic DX and you can make great contacts on minimal power.

So why the CB amps?

>There are legitimate reasons for owning and running these amps. There
>are legitimate reasons for asking about repairs/optimizations here on
>this newsgroup, as well.

Sorry. Not buying it. If you wanted to get info or advice about legal ham operation then you would certainly NOT be looking in rec.radio.cb for i

Warranty Notes

We have noticed an increase in radios sent in for warranty repair that have problems directly related to the modulation limiter being clipped or removed. Radios sent back with this modification will not be covered by warranty. When you clip parts out of a well-designed radio, you can cause harmonics, which result in distortion. If you clip a part, then you have defeated the purpose for which that part was intended. This may cause related parts to go bad; thus causing the radio to perform in a way that it was not designed.

We made this decision after a hard analysis of radios returned for warranty and/or repair during a two month period. We even went so far as to fly both the top technician and engineer from the factory to assist us in solving the problems. The result of the analysis, and confirmed by the factory personnel, were startling to us - 87% of the returned radios were caused by the below modifications. This reflects a problem that is not with the radio or it's manufacturing process. It can also cause you problems with your customer, as when something goes wrong, they tend to blame you, your mother, father, your kids, and every one at Ranger - both here and in China! All because of something someone else did.

Here is the list of controls &/or components we found that are commonly de-tuned &/or removed by customers:
RCI-6300 Series: VR14 (AM Carrier), VR16 (AM Modulation), and Q39 (TX Audio Limiter).
RCI-6900 Series: VR15 (AM Carrier), VR17 (AM Modulation), and Q43 (TX Audio Limiter).
RCI-2950/70/90 Series: VR13 (AM Carrier), VR14 (AM Modulation), and Q32 (TX Audio Limiter).
RCI-2950/70/90 DX Series: VR15 (AM Carrier), VR17 (AM Modulation), and Q43 (TX Audio Limiter).

If the above components are removed or max-tuned, the warranty will be voided, as it is a bad practice and by doing these modifications can cause problems of spurious emissions and overheating.

So, let's start an education process. Tell your customers that over modulation causes the user and the radio to sound like crap. It overworks the components of the electronic device and causes the parts to have premature wear and failure. Inform them that in accordance with good technical practice, you will not be a part of that kind of "butchering". You may hear some flack from them at first, but if you explain it to them correctly, they should understand. Plus you can show them the difference in the output signal of a clean sounding radio transmission verses an over-modulated and distorted signal.

Then explain that if they clip a part out of a radio, they have defeated the purpose for which that part was intended. This may cause some other or related parts to go bad; thus causing the radio to perform in a way that it was not designed. An example is the overheating problem caused by removing the TX audio limiter. It causes the power transistors to overheat and shut down or just burn out.

I think, together, we can help clean up the signals and cut way down on the problems that you encounter with these operators. If we can eliminate this one area of problems for you, we can free up the Ranger technicians to solving and repairing real problems.

And, if you are going to "verify" the "alignment and tuning" of a Ranger radio before selling it to a customer, let me remind you to please check all the features and functions of the radio BEFORE opening and breaking the seals. This way, if something is wrong, it can be taken care of in the fastest way possible. It doesn't take that long to check and it may save you some headaches. It also removes any doubt of whether the radio was at fault or something someone else did that caused the failure. Our actual failure rate of the radios is one of the lowest in the industry, so just take the time to check it out first.

I must totally agree CB is a no brainier and anyone with a few bucks can get on it.
I was getting a ride home from one of the local radio stores with a CBer a wile ago and behind the seat he had a 1500 watt amp hooked to a Uniden 2510 just to talk about 20 city blocks. When I got home I tried to contact him and he also had the worst signal that I have heard in a long time. He seems to get bad signal reports every time I hear him trying to talk to someone. One of the radios I have hear is a Yeasu FT-101 with 11 meters built in and when I bring that one to bare on 11 meters I get nothing but flowers both local and DX but like you I very seldom run full power and when I do I keep an eye on the spectrum analyzer for spikes that could go into the air and commercial bands. I prefer to run my president AR-144 stock for most 11 meter work.

Dear RCI,

You have manufactured and marketed a radio designed to appeal to illegal CBers. Now you are complaining that these same illegal cbers are making illegal mods and attempting to obtain warranty service via fraudulent means. We think you made your bed - and now you should have to lie in it without complaining.

2286. AntiKeyClown FAQ Rev 6/19

Newsgroup: rec.radio.cb
Date: 2001-06-20 04:00:51 UTC
From: AntiKeyClown Printing Office <nospam@newsranger.com>
Message-ID: <TdVX6.2104$yp1.56293@www.newsranger.com>
Source record: 86377

ANTIKEYCLOWN GROUP FAQ
revised - 06/19/2001

Q: What is a KeyClown?

A: A 'KeyClown', in a nutshell, is a CBer gone bad. The name is derived from the term 'keydown', which is the equivalent of a dragrace using illegal radio amplifiers. A keyclown can be recognized by his or her open and public disregard for FCC regulations, total disrespect for other CBers, and hostile aggression towards any form of criticism.

Q: What is an Anti-KeyClown?

A: An 'AntiKeyClown' is a legal CBer that actively confronts keyclowns on their own terms. Disrespect is countered with disrespect, hostility with hostility, etc. Any method or tactic used by the keyclown to harass legal CBers, intimidate proponents of legal operation, or dominate either the Citizen's Band or any other aspect of legal CB use, will be considered a fair and viable method or tactic for use against the keyclowns.

Q: Are the AntiKeyClown posts actually all the work of N8WWM? Or Sparky? Or Leland? Or...?

A: There are many AntiKeyClowns. Each Anti takes upon him or herself the role that is best suited to their talents and abilities. While one Anti may choose to remain 'behind the scenes', another will perform their duties as a spokesperson. Some wish not to be indentified, while others enjoy the freedoms of full exposure. An Anti need not identify him or herself as such, and may make only a minor contribution to the effort. This describes the majority of the AntiKeyClowns. Only a few have choosen to be visible.

Q: Why do you hate illegal/outlaw CBers?

A: AntiKeyClowns are not about hate. An Anti is typically a person that has been offended, disturbed or victimized by the actions of keyclowns, and has chosen to take action instead of accepting defeat at the hands of outlaws.

Q: What do keyclowns do?

A: A keyclown generally ignores two important laws:

The first is by using radio frequency amplifiers with their CB radios. These amplifiers are usually of poor design and construction, and will emit powerful harmonics. These harmonics, or "splatter," interferes with broadcast radio and television, as well as other legal radio communications such as police, fire, ambulance and aircraft communications. It also disrupts the Citizen's Band on other channels, making the channel or band useless for several miles within the radius of the keyclown. Many times

this disruption is done with the deliberate intention of "shutting down" legal CBers.

The second law involves the use of frequencies that are outside of the Citizen's Band, and can even intrude on the 10 and 12 meter Amateur Radio bands. The primary reason for doing this is because people like themselves have made the legal channels useless in their area.

The behavior of keyclowns, if left unchecked, may eventually lead to the elimination of the Citizen's Band altogether. As the number of keyclowns increases, so will the need for more bandwidth and more power. This is a "king of the hill" mentality, and anyone that operates legally gets thrown off the hill. At some point in the future the keyclowns will become so loud and disruptive that the only way to stop them will be to 'clear the board' by shutting down the Citizen's Band completely. We would like to prevent both from happening.

Q: So why don't you just make your point and then go away? You're being "rude" by contantly poking your nose where it doesn't belong.

A: The Anti's believe in the Golden Rule.

Q: But you're just riling up the illegals and making them angry. That's not being a responsible person.

A: Their actions and emotions are not our responsibility.

Q: Why don't you go back and clean up your own mess on the ham bands?

A: The AntiKeyClowns have nothing to do with the Amateur Radio Services. It is true that some of the Anti's are hams, but it is also true that some of the keyclowns are hams as well. Amateur Radio has no more relevance to this subject than does saltwater fishing.

Q: But I'm a ham and I don't care what goes on on CB.

A: You should. Every year the "CB problem" gets worse, not better. More phoney export radios are flooding the market. More freebanders and confused truckers are showing up on 10 meters. We guarantee that if nothing is done, amateurs will be unwillingly "sharing" the 10 and 12 meter bands with illegal CBers in a very short time. And with the increase of illegal amps splattering into your home entertainment systems and other consumer devices, this is an issue that needs to be addressed not only by CBers and hams, but also by the general public.

Q: I support legal CB, but I do it quietly.

A: As stated before in this FAQ, each person will do what they feel is best for them. However, illegal radio operation is making the radio spectrum a very noisy place. In time, your quiet legal radio operation will be silenced by the keyclowns. This is what the Anti's see in the very near future, and it is what we are trying to prevent.

Q: You can't stop people from posting. It's perfectly legal to talk about illegal CB.

A: It is not our intent, nor can we prevent anyone from excercising their rights under the 1st amendment to the US Constitution.

Q: So why don't you go to a CB coffee break and harass people?

A: Our methods are diverse, but legal. We have noted the hostility of many of these illegal operators, and any attempt to provoke a group with another group would probably incite large-scale violence. Violence is not our intent, and would not benefit anyone. We would prefer to stand at a distance and collect information that can be used by the proper authorities.

Q: But I thought the law said I can own an export radio.

A: The FCC has issued a reminder about those HF transceivers ostensibly marketed for "amateur" use but actually designed and intended specifically for the so-called "freeband" radio operators who operate primarily in the 26 to 28 MHz frequency range. This notice, as well as all other FCC related material my be found at www.fcc.gov.

Q: Why can't I sell my CB amp or export radio on the newsgroup?

A: We cannot provide any legal advice except to suggest that anyone interested should read the FCC regulations. If you are in doubt as to how those regulations apply to you, consult an attorney, or email the FCC and they will provide a quick and authoritative answer to your question.

Q: But illegal CBers are just "bending the law." These laws are trivial.

A: The laws that are being "bent" can result in fines up to $75,000 and up to 1 year in prison. The punishment is not trivial, nor is the crime.

Q: The FCC doesn't enforce these laws, so why should I bother to obey them?

A: The FCC's recent lack of enforcement is no reason to think that they cannot enforce these laws at any time they please. That is a decision to be made by the FCC, not the AntiKeyClowns.

Q: Illegal CB is civil disobedience. Like the Minutemen did during the Revolutionary War. Or Rosa Parks during the Civil Rights protests.

A: We are, and always have been, open-minded to any argument providing moral justification for this illegal behavior. Unfortunately, no one has provided such an argument.

Q: CB is CB.....legal or not!

A: Here's an analogy. A hunter is one who follows hunting laws. Once he stops following the the laws he is a poacher. A CB'er is one who follows CB regulations. Once he stops following the regulations, he is a pirate.

Q: Are you flamers? Trolls?

A: Yes and no. We flame and troll as necessary. Keyclowns are the only targets, and only keyclowns that have previously trolled or flamed others.

Q: But you're screwing up the newsgroup.

A: Keyclowns have been "screwing up" the Citizen's Band for several years. We exist as a consequence of their behavior. Please do not confuse 'cause' (the keyclowns) and 'effect' (the AntiKeyClowns). Without keyclowns there would be no AntiKeyClowns.

Q: Your anti-illegal CB postings are useless.

A: Perhaps. Perhaps not.

The best thing is the K.I.S.S. method. Keep It Simple Stupid. I also find that if you tell some of the B.T.O., (Big Time Operators) that you are a newbe they will jump all over you. The best thing to do when that happens is turn the radio off and don't give them the pleasure of a fight on the air. Don't give out your address or phone # to anyone. I know many a CBer that has had there car broken into and there radio ripped out or prank phone calls at all hours of the day and night for doing just that. Come up with a good handle, (CB name). Try to find someone that you know who has a CB then find a clear channel and start talking to them. Try to avoid Ch..9 the international emergency channel, 19 the truckers channel and 35 to 40 the SSB channels. Talking with someone you know will get you use to the mic and the adjustments on the radio. Others will hear you and may jump in and then you will get to know them. I hope that I have been some help and have fun.

ANTIKEYCLOWN GROUP FAQ
revised - 06/19/2001

Q: What is an Anti-KeyClown?

A: An 'Anti-KeyClown', in a nutshell, is a CBer gone bad. The name is derived from the term 'keydown', which is the equivalent of a dragrace using illegal radio amplifiers. An Anti-keyclown can be recognized by his or her open and public disregard for FCC regulations, total disrespect for other CBers, and hostile aggression towards any form of criticism.

Q: What is an KeyClown?

A: A 'KeyClown' is a legal CBer that actively confronts Anti-keyclowns on their own terms. Disrespect is countered with disrespect, hostility with hostility, etc. Any method or tactic used by the Anti-keyclown to harass legal CBers, intimidate proponents of legal operation, or dominate either the Citizen's Band or any other aspect of legal CB use, will be considered a fair and viable method or tactic for use against the Anti-keyclowns.

Q: Are the KeyClown posts actually all the work of N8WWM? Or Sparky? Or Leland? Or...?

A: There are the only KeyClowns. Each Keyc takes upon him or herself the role that is best suited to their talents and abilities. While one Keyc may choose to remain 'behind the scenes', another will perform their duties as a spokesperson. Some wish not to be identified (not indentified), while others enjoy the
freedoms of full exposure. A Keyc need not identify him or herself as such, and may make only a minor contribution to the effort. This describes the majority of the AntiKeyClowns. Only a few have choosen to be visible.

Q: Why do you hate illegal/outlaw CBers?

A: AntiKeyClowns are not about hate. An Anti is typically a person that has been offended, disturbed or victimized by the actions of keyclowns, and has chosen to take action instead of accepting defeat at the hands of outlaws.

Q: What do keyclowns do?

A: A keyclown generally obeys two important laws:

The first is by using radio frequency amplifiers with their CB radios. These amplifiers are usually of excellent design and construction, and will emit powerful harmonics if not setup correctly. These harmonics, or "splatter," interferes with broadcast radio and television, as well as other legal radio communications such as police, fire, ambulance and aircraft communications. It also disrupts the Citizen's Band on other channels, making the channel or band

useless for several miles within the radius of the dirty radio user. Many times this disruption is done with the deliberate intention of "shutting down" legal CBers by idiotic, self-centered, power hungry mudducks.

The second law involves the use of frequencies that are outside of the Citizen's Band, and can even intrude on the 10 and 12 meter Amateur Radio bands. The primary reason for doing this is because people like themselves have better DX'ing conditions coming from the unused MARS frequency spectrum abve CBRS and the 11.5 meter area below CBRS.

The behavior of keyclowns, if left unchecked, may eventually lead to the elimination of the their HAM Callsign altogether. As the number of keyclowns increases, so will the need for more bandwidth and more power. This is a "king of the hill" mentality, and anyone that operates legally gets better equipment and shows the JACKASSES how to setup a good, clean, loud-assed station or mobile without the overdriving consequences. At some point in the future the keyclowns will become so loud and disruptive that the only way to stop them will be to 'clear the board' by shutting down the Citizen's Band completely. We would like to prevent both from happening.

Q: So why don't you just make your point and then go away? You're being "rude" by contantly poking your nose where it doesn't belong.

A: Doug, Frank and I believe in the Golden Rule. Stick our thumbs up each others asses aand bark at the moon.

Q: But you're just riling up the CBers and making them angry. That's not being a responsible person.

A: Their actions and emotions are not our responsibility. We have no one else to blame but Bill Clinton for being such a faggot assed president.

Q: Why don't you go back and clean up your own mess on the ham bands?

A: The AntiKeyClowns have nothing to do with the Amateur Radio Services. It is true that some of the Anti's are hams, but it is also true that some of the keyclowns are hams as well. Amateur Radio has no more relevance to this subject than does saltwater fishing.

Q: But I'm a ham and I don't care what goes on on CB.

A: You should. Every year the "CB problem" gets worse, not better. More phoney export radios are flooding the market. More freebanders and confused truckers are showing up on 10 meters. We guarantee that if nothing is done, amateurs will be unwillingly "sharing" the 10 and 12 meter bands with illegal CBers in a very short time. And with the increase of illegal amps splattering into your home entertainment systems and other consumer devices, this is an issue that needs to be addressed not only by CBers and hams, but also by the general public.

Q: I support legal CB, but I do it quietly.

A: As stated before in this FAQ, each person will do what they feel is best for them. However, illegal radio operation is making the radio spectrum a

very noisy place. In time, your quiet legal radio operation will be silenced by the keyclowns. This is what the Anti's see in the very near future, and it is what we are trying to prevent.

Q: You can't stop people from posting. It's perfectly legal to talk about illegal CB.

A: It is not our intent, nor can we prevent anyone from excercising their rights under the 1st amendment to the US Constitution.

Q: So why don't you go to a CB coffee break and harass people?

A: Our methods are diverse, but legal. We have noted the hostility of many of these illegal operators, and any attempt to provoke a group with another group would probably incite large-scale violence. Violence is not our intent, and would not benefit anyone. We would prefer to stand at a distance and collect information that can be used by the proper authorities.

Q: But I thought the law said I can own an export radio.

A: The FCC has issued a reminder about those HF transceivers ostensibly marketed for "amateur" use but actually designed and intended specifically for the so-called "freeband" radio operators who operate primarily in the 26 to 28 MHz frequency range. This notice, as well as all other FCC related material my be found at www.fcc.gov.

Q: Why can't I sell my CB amp or export radio on the newsgroup?

A: We cannot provide any legal advice except to suggest that anyone interested should read the FCC regulations. If you are in doubt as to how those regulations apply to you, consult an attorney, or email the FCC and they will provide a quick and authoritative answer to your question.

Q: But illegal CBers are just "bending the law." These laws are trivial.

A: The laws that are being "bent" can result in fines up to $75,000 and up to 1 year in prison. The punishment is not trivial, nor is the crime.

Q: The FCC doesn't enforce these laws, so why should I bother to obey them?

A: The FCC's recent lack of enforcement is no reason to think that they cannot enforce these laws at any time they please. That is a decision to be made by the FCC, not the AntiKeyClowns.

Q: Illegal CB is civil disobedience. Like the Minutemen did during the Revolutionary War. Or Rosa Parks during the Civil Rights protests.

A: We are, and always have been, open-minded to any argument providing moral justification for this illegal behavior. Unfortunately, no one has provided such an argument.

Q: CB is CB.....legal or not!

A: Here's an analogy. A hunter is one who follows hunting laws. Once he stops following the the laws he is a poacher. A CB'er is one who follows CB

regulations. Once he stops following the regulations, he is a pirate.

Q: Are you flamers? Trolls?

A: Yes and no. We flame and troll as necessary. Keyclowns are the only targets, and only keyclowns that have previously trolled or flamed others.

Q: But you're screwing up the newsgroup.

A: Keyclowns have been "screwing up" the Citizen's Band for several years. We exist as a consequence of their behavior. Please do not confuse 'cause' (the keyclowns) and 'effect' (the AntiKeyClowns). Without keyclowns there would be no AntiKeyClowns.

Q: Your anti-illegal CB postings are useless.

A: Perhaps. Perhaps not.

>Any takes???

The full-size 1/4 wave.

- A full-size 5/8 wave would work better than any 1/4 wave, but is a bit too large for moblie use.

- A short 5/8 wave is more expensive.

- A 5/8 wave requires an antenna matching unit (which may be built-in), making it even more expensive, while any 1/4 wave will give a usable SWR untuned.

IMO, of course.

Cross-posted to: rec.radio.cb,es.rec.radio.amateur,nl.radio.amateur,fr.rec.radio.amateur,uk.rec.radio.cb

I am looking for a spare power supply cable for a Team Tricom 444 CB transceiver. This radio is identical to the Intek Multicom 3230, DNT Calypso, Euro 3900, Midland 77-290, SuperStar 3900 LCD. I have visited two different CB equipment suppliers and they don't have it nor know where I can find one.

I will appreciate your help in finding a dealer who can supply me with the power supply cable (or just the connector - I can make the cable myself).

I am located in Belgium, but any dealer in EU will work.

You are incorrect a ham radio can be modded it is normally done to extend the receive Hams have more than enough frequencies to talk on they don't need to freeband.

You're getting more like Twisted every day Tim, nothing but excuses. You're just paying lip service to the fact that you can't produce proof of what you claim to have occurred. As a matter of fact NOBODY to date on this news group has proved the claim I have forged any messages. In fact Tim, several people have told Twisted just the opposite. Hummm....

Sounds like you Twisted, particularly the last one.

>"As he fails to answer any questions put to him these days.

Can't expect somebody like you Twisted with a room temperature level IQ to understand, so I don't bother. Of course all that's of interest to me, and 5 other people, is the posting time anyway. I have to enter this in to the spreadsheet and circulate the results to the other people participating in the current "Twisted's Crock Pot of Logic" pool.

Every time you post you lose because somebody else is making a buck off your dumb ramblings. 8-))

LMAO! Now I' ve seen everything. Leland and Sparky calling folks trolls..aheeeeheeeeheee..this after the fact they were both warned by their ISP's which is why they both cleaned up their language on their anonymous troll posts and forges, ain't that right, gals? Never mind that Leland attempted to distance himself from Doug again yesterday, remember, he claimed many times he was never involved. Leland, you should stop lying. It illuminates your yellow streak. Would you care to reread the posts by ham ops where you were accused of forging, since you lie and say no one else called you on it? That's what I thought!
Where are you posting from Leland? Are you near a transmitter? Please explain, in your own criminal fashion, how your hypocritical name calling of "criminals" for freebanders and "rulebreakers" is any different than you seeking assistance in breaking your federal housing law to erect an outside prohibited structure, an antenna in your case.
HEHEHEHEEE! I am glad to bring a jolly chuckle to your otherwise abysmal days of lies and hypocrisy. Glad to assist in bringing a smile to your scowling mug! . Let's get real for a moment, Scott. You don't work. I know it, and so does the group. Matter of fact, it was a member of the group that pointed out the discrepancies in your lies when you said you post from supernews at work and media one at home. Just what shift do you claim to work? AHAHHAHAHA! It was also a member of the group that pointed out your hypocritical lies when you were looking for assistance in breaking federal law for your antenna. Just another small lie in your big ball of melted wax.
Also, I still don't see you anywhere but in here, Leland. Were you not invited to the other radio related groups? Oh, that's correct, one needs cb friends and acquaintances for that to happen. Imagine that. You're still on your own Leland, with no support from anyone. You go, girl! You always do fine in outting your own lies,, you just need a tug on your choker chain once in awhile."

Source record: 86426

One problem. It's obvious you have never worked 10 or 12 meters. Amps are not required on these bands.

"Nor anywhere else are amps "required."

There's no fighting to "get down" on anyone or "plug ears". Propagation is such that a regular 100W PEP works fantastic DX and you can make great contacts on minimal power.

"Same goes for the freeband above 405 but below the ten band."

So why the CB amps?

"Oh, 100 watts does just fine for freeband DX on SSB, matter of fact, most of the time it's not needed at all. When conditions are in, if you can hear them, you can usually reach them."

There are legitimate reasons for owning and running these amps. There are legitimate reasons for asking about repairs/optimizations here on this newsgroup, as well.

Sorry. Not buying it. If you wanted to get info or advice about legal ham operation then you would certainly NOT be looking in rec.radio.cb

"And if the hammie nocoders wanted nothing to do with cbers, they would not be here, but they are. How many of our regular resident nocoder copps have you seen ever engaged in a positive discussion regarding cb radio or DX? Not many, not many."

Doesn't say much for yourself, you responded to a forge.

BTW Brian, do you remember what SWR means? Forward power to reflected
power? That means if you have an SWR of 2:1, you cand send 2 watts
down the line and 1 watt will be bounced back. Going back to 1st grade
math, that's about a 50% loss, not 5%.

Maybe you should recalculate your own IQ...

> Any takes???

A 5/8 wave antenna will give you a bit of gain, stronger signal, over a 102" whip, which by the way is only a 1/4 wave long. If you live or travel through areas where there are a lot of hills etc. you may not want the 5/8 wave antenna. The reason being is the increased gain comes at the expense of the pattern around the antenna. In other words picture a round balloon. That would be similar to the 102" whip. Now squeeze the balloon by pressing down from the top. The would be what the 5/8 wave antenna pattern would look like, most of the signal power is confined to a narrow region in a horizontal plane. In a hilly area that horizontal pattern can make it very difficult to contact other stations that are not at approximately the same elevation you are. For the last case the 102" whip would be the better choice. So the kind of antenna you need depends on how and where you plan to operate.

Except the mismatch may cause excessive heating of the output transistor,
leading to failure. Second, the SWR reading he sees may not be correct
anyway. In mobile installations currents can flow on the outside of the coax
shield which mucks up the SWR reading.

Since Brian doesn't want to explain it....

Voltage Standing Wave Ratio is calculated by dividing the forward voltage by the reflected voltage. Current SWR is the same but using current. Since the impedance of the forward and reflected signals are the same, most SWR meters measure only voltage.

If the VSWR is 2:1 then the reflected voltage is half the transmitted voltage. Again, since the impedance is the same for both signals, the reflected current is half the transmitted current. Therefore, the reflected power is half the forward voltage times half the forward current, or, one-fourth the forward power.

25% loss.

Except the mismatch may cause excessive heating of the output transistor, leading to failure.

"Maybe that junk you run would blow at a 2:1. I doubt the Uniden would."

Second, the SWR reading he sees may not be correct anyway. In mobile installations currents can flow on the outside of the coax shield which mucks up the SWR reading.

"Lots of things can muck up the SWR in a mobile. Why not offer a correctional solution for your opinioned diagnose that one not familiar with SWR, such as the inquirer, can follow, instead of just saying, "It may be broke?"?"

And this coming from a guy who doesn't even know which end of a hot soldering iron not to grab. Of course you don't even know how to solder a mic plug on either as you stated before in a prior E-mail. You think you're so smart then help this guy out Twisted, and try not to look foolish doing it. 8-))

Anyway I have to log this one in the "Twisted's Crock Pot of Logic" office pool spreadsheet, and distribute it over the LAN here. Just have to get the posting time right is all. You have to start thinking of better crap to stick in your posts Twisted, some of the people here are getting bored reading the same old nonsense. Get "creative", heck you're good at lying so make something up, I know you can do it because you have done it so often before.

I've seen them at garage sales for a buck. I even saw a bunch of them left in the trash bins in the fleamarket area as people when home on a Sunday at the close of the Dayton Hamvention last May. Some yo-yo couldn't even give them away for free, and it was cheaper to leave them behind as trash than pack them up.

I picked up a large box-full last month that someone was just going to
throw away. Near the bottom was a Bengal in very good shape. What a
waste, it's a great radio. That was 'the shit' when I was growing up.
All I need for it now is the channel selector knob ring.

Hi, Richard,

I've been takin' a break from the newsgroups for a couple weeks and I see it hasn't changed much. I did read/listen to rainreport and found the same blurb from Mr. H. He has been promising that something was about to be started over the 10 meter thing, and I guess this is the first warning shot. Takes bureaucracy time to get underway, but once it does, things begin to happen. I
also saw the busts of stations "freebanding"--not all of them were hams, either.
I know people won't believe it can happen to "them", but it certainly CAN, and
while I'm not as concerned about the people operating between 27.405 and 28.000 MHZ, I AM glad to see Riley go after the 10 meter "bandits" . The man DOES keep his promises!

Jerry

And you still havent offered any proof other than your word which is good for nothing since you cannot prove him wrong. You have no credibility, how can we believe you with anything you say. If you make accusations then cannot prove them, which means your word is worthless. Post it or Shut the Hell up.

>
>
>--

Not.............In the real world a 102" SS whip, the one commonly
available, would be flopping around all over the place. In doing so it
would degrade your signal intermittently. Where as the only
realistically available 5/8 wave antennas for CB, the Firestik type,
will be more rigid and will not degrade your signal to the same degree
as the SS whip.

And now, ladies and gentleman of the cb ng, I bring to you our very own Glen Cambell clone and wannabe space cadet, none the other than Frank Gilliland...

http://www.users.uswest.net/~fbg

No wonder Frank has always had it in for me. He referred to himself as an "author" regarding his ET ramblings and search for the Space Monsters and Alf in his site, and Dogie throwing my article in his face was more than the space cadet could handle. Judging by his psychedelic induced efforts, the poor, lost Milky Way watching, star gazing, rainbow embracing, telescope invasive probing and spying, Plutonian hallucinating, tree hugging, earthworshiping cber Frank would like nothing better than attention and accolades for his paranoid inner observations concerning his imaginations of outter space. No wonder the guy is familiar with L. Ron Hubbard. Also, note his links to the (GAG) ACLU and the radical earth activists. Thanks goes out to the cb media guys for showing Glen's, er, Frank's green attempt at his minute of fame. Now if only he was as jovial with cb as he was about aliens....

"Maybe that junk you run would blow at a 2:1. I doubt the Uniden would."

Leland hissed like a snake in the grass: And this coming from a guy who doesn't even know which end of a hot soldering iron not to grab. Of course you don't even know how to solder a mic plug on either as you stated before in a prior E-mail. You think you're so smart then help this guy out Twisted, and try not to look foolish doing it. 8-))

"If your anger would actually allow you to calm down long enough to read instead of frothing at the mouth and dodging everyone that puts a question your way, you may learn something. I do too know how to ire a mic, and I learned it here before you and your pals started your games. No one likes a know it all and that is how you attempt to come across, but you do nothing, nada to help newbies, like this pathetic attempt. The only reason you even replied was because the day before you were accused of not contributing anything positive to anybody here, so as usual you had damage control to do. You really didn't offer any assistance to the guy. It is obvous he is new at the game, and you hit him with "current on the outside of the shield" and left it at that." You know damn well that ain't gonna help a newbie or someone new to install and setting up their radio. Just who the hell were you trying to impress with that bit of useless info? On the contrary, I know I am not the guy to answer this post, I'm learning myself, which is why I didn't reply, I had nothing to offer. You are the one that replied to it. You said it was broke, now tell him how to fix it. Or go away."

Timmy, This has to with your credibility, If you cannot post proof How are we to believe anything you say, I want to believe what people post but if they post lies and make claims that they cannot provide proof then there is a credibility Issue. What it has to do with me is you posted it to a public forum, and I need to know who I feel is telling the truth in this case. If you can prove what you say I will have to go along with what you say because then you will be a man of your word. Someone we can count on for the truth. We are all about fairness Tim, If you are correct we want to be fair to you and give you your due, and if Leland Is wrong we will make sure he is reamed for it. You may not like what we have to say but we talk the truth and can and will provide evidance to back up our claims. As you have seen I am sure with Landshark and Phoneman, they put the evidance out there and it was gathered
this is what you need to do if what you say is true the evidance is out there, go get it bring it to us, bring it to the group, make Leland look bad, why wouldnt you. Here is your chance to meet your maker to send him back to where ever he came from.
. Remember
"The Truth will set you Free!"

It isn't illegal for a ham to modify his radio, but he cannot use the
radio on any unauthorized frequencies outside the ham bands with the
exception of certain MARS frequencies, and only then if he is a member
of MARS. But a ham can make all the mods to a rig he wants to as long as
it still complies with the rules of output power, spectral emissions,
stability, ect.

>
> ok it is illegal for ham radios to be modded then why in the hell do almost

hello to all
a while back some one posted the dimensions for a 2element yagi beam for
11meters boom lenght is 6ft and i beleive it said director 108inches and
reflector
114inches just need to confirm if true thanks n1xwl

Hmmm ... I don't understand something here. Just because 50% of the wave is reflected does NOT mean it is lost - it simply bounces back to the antenna again. Frankly, a high SWR does NOT necessarily mean high loss; for that matter, neither does a low SWR indicate you are radiating efficiently. Anyone care to guess what the impedance is for a quarter wave vertical over a perfect ground? Start at 35 ohms and work DOWN. SWR on a 50 ohm coax will be over 1.6. Some folks feed untuned longwires (I did, and it was the best antenna I ever had). The SWR can be high on the feedline, but unless it is some combination of lossy coax, very long feed, or exceedingly high SWR on coax, loss can be quite low. Of course, you have to match it at the transmitter to have the transmitter operate efficiently, but the SWR on the feedline will still be high. Come to think of it, that is one reason ladder line is used (I've never used it). Oh yes, on that 'perfect' 1 to 1 SWR, might just be you have an imperfect ground, raising that 30 something ohms up to 50 - close to 20 ohms of resistance, which works about as well as the old Heathkit 'Cantennas' for radiating (40 percent of the signal lost in pure resistance).

Tim, all this time spent ducking the question . When yesterday you said you weren't wasting your time, you got this girlfriend and you got that hobby. The time spent arguing your point you could have posted legit proof but I feel too like the rest that you or Twisty have none.So Lets see a header or IP address that or a link to the post so we can see. I don't think there is one, and I am willing to put up my Daddies hard earned money to see this post $1000.00 Reward. Either Post it or Never bring it up again with Leland. Because it sounds like your crying and whining and can't prove anything. I got $1000.00 says So
Sorry I didn't hear you on the Bowl last Nite I was monitoring it.

Probably me. That will work. The standard approach is a reflector at .15 wavelength spacing about 5% longer than the driven element. The gamma match will be your biggest problem.

Might I suggest buying the Antenna Book from the ARRL. Aside from a good book you get some very useful software.

Dick NBK

2428. Re: question about RCI 2950 modification

Actually, I have transmitted 4 miles or more with the stock duck antenna to a base station. Using the telescoping antenna, I have went 5 or 6 miles to a base station from inside the house!

It has to be very clear conditions though, and to get that kind of range you have to be transmitting to a good base station setup. Stock handheld to stock handheld your looking at 1 mile or so under clear conditions. Best of luck.

Rec.radio.cb Frequently Asked Questions (Part 1: Introduction)

This is a regular posting of frequently-asked questions (FAQ) on
rec.radio.cb.
It is intended to summarize the more common questions on this newsgroup and
to
help beginners get started. This saves network bandwidth and tries to
maintain a good signal-to-noise ratio in the discussions.

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To keep the size of each article down, the FAQ has been split into 4 parts:
Part 1: Introduction
Part 2: Getting Started
Part 3: Communication
Part 4: Technical Trivia

If you are a new reader on rec.radio.cb, we suggest that you print and
review
the FAQ articles. If you are new to NetNews, please also see the
news.announce.newusers newsgroup before posting any articles.

THIS ARTICLE IS INTENDED TO BE A FREE RESOURCE FOR THE BENEFIT OF USENET
READERS. YOU MAY COPY AND REDISTRIBUTE IT UNDER THE CONDITION THAT THIS
MESSAGE AND CREDIT TO THE EDITORS AND CONTRIBUTORS ARE INCLUDED WITHOUT
MODIFICATION. Material from the FAQ may be used to answer any questions.
Corrections and updates are welcome.

Table of Contents

Dates indicate last modification.

Part 1: Introduction
* New Editor Sought (8/94)
* Table of Contents (9/93)
* Notes about adding questions & answers to this list (2/92)
* Acknowledgements (9/93)
* Notes on "Netiquette" (4/92)

Part 2: Getting Started
* What is CB? (6/92)
* Do I need a license to operate a CB radio? (1/93)
- in the USA (6/92)
- in Canada (2/93)
- in Japan (6/92)
- in Australia (1/93)
- in New Zealand (7/93)
- in the UK (6/92)
- in France (4/93)
- in Germany (6/92)
- in Italy (7/93)
- in Russia (7/93)
- notes for all countries (7/93)
* What are the CB Frequencies? (11/92)
- in the USA (6/92)
- in Canada (6/92)
- in Australia (2/93)
- in New Zealand (7/93)
- in Japan (9/93)
- in countries subscribing to the European CEPT conference (11/92)
- in the UK (6/92)
- in France (11/92)
- in Germany (11/92)
- in Italy (7/93)
- in Russia (7/93)
- in other countries (1/93)
* What are the common brands of CB radios? (7/93)
* What should I consider when choosing a location for my antenna? (7/92)
* Once I hook up my CB and antenna, is the radio ready to use? (2/92)
* What are good antenna characteristics and what are some good antennas?
(6/92)

Part 3: Communication
* Which 10-codes are most commonly used? (7/91)
* What are the CB 10-codes? (7/91)
* Where are 10-codes used? (3/92)
* What are some of the more common Q-codes? (3/92)
* What are some tips for communicating with others on the CB? (12/91)

Part 4: Technical Trivia
* What is single sideband? (11/92)
* Do I really get 120 channels on a radio with single sideband? (12/91)
* What are "linear amplifiers" and can I use them with a CB? (7/93)
* Who is "Skip" and why can I hear him all the way across the continent?
(7/93)
* How can I reduce engine noise on my mobile CB? (3/92)
* What is GMRS? (6/92)
* Where can I learn more about radio? (3/92)

New Editor Sought

With any volunteer effort, contributors come and go. The time has come to "pass the torch" to another volunteer as editor of the CB FAQ. If you're interested in taking on the job of FAQ maintainer, you need to have experience with UseNet and the Internet. You also need access to a Unix site which has the PERL language (for the AUTO-FAQ software to run.) You don't need to have a lot of experience with CB radios - though less experience means more leaning on the Net for experience. Expect to learn a lot about it.

This would be an ideal task for a 2nd- or 3rd-year college student who can make a multiple-year commitment to volunteer for this.

Notes about adding questions & answers to this list

We accept suggestions from the rec.radio.cb community. Please consider the following criteria because we will also use them to determine which questions to include.

- is it a commonly asked question?
- will its inclusion help reduce usage of net bandwidth?
- how useful is it to CB users in general?

Note that we can't necessarily include every question or every technical detail because we don't want this FAQ itself to become a net bandwidth hog. We have to consider the intended audience - this document is intended to help people get started with CB even if they have no previous technical background with radio. Therefore, it will not have all the technical discussions that one might expect in, for example, an amateur radio newsgroup.

If you suggest a question for this list, please include the answer. You'll get credit for your contribution and you'll speed up the process of getting the information ready for distribution.

If you feel that your suggestion passes any of the above criteria, send it to cb-faq@uts.amdahl.com so that it will reach all the FAQ coordinators:

Jean-Marc Bonnaudet J.Bonnaudet@mch.sni.de (Munich, Germany)
Yumeto Funahashi 7K2EUP funa@sramha.sra.co.jp (Saitama, Wakoh, Japan)
Ian Kluft KD6EUI ikluft@kluft.com (Santa Clara, CA, USA)
Paul W Schleck KD3FU pschleck@unomaha.edu (Omaha, NE, USA)

English version posted to rec.radio.cb by Ian Kluft
Japanese version posted to fj.rec.ham by Yumeto Funahashi

International readers: when you see something specific to some countries but the information on your country is missing, please e-mail the details to us if

you have them.

Acknowledgements

The following people are recognized for their contributions (by e-mail or news) that were included in the rec.radio.cb FAQ:

Technical Contributors:
Michael Larish KD6CTZ (nomad@ecst.csuchico.edu, Chico, CA, USA)
- helped write the original version of the FAQ
- served as an editor on the project for 3 years
Paul Zander AA6PZ (paulz@hpspdla.spd.hp.com, Palo Alto, CA, USA)
- comments and input on the SWR discussion
Bob Myers KC0EW (myers@fc.hp.com, Fort Collins, CO, USA)
- news article on antenna grounding in mobile installations
Bret Musser (bjm@f.gp.cs.cmu.edu, Pittsburgh, PA, USA)
- news article on reduction of engine noise in mobile installations
Benn Kobb KC5CW (bkobb@access.digex.com, Houston, TX, USA)
- information on the General Mobile Radio Service (GMRS)
Bob Witte KB0CY (bob@col.hp.com, Colorado Springs, CO, USA)
- additional info on GMRS - frequencies, fees, useful contact organization

International/Regulations Contributors:
Neil Robertson (conjgr@lut.ac.uk, Leicestershire, UK)
- original info on CB in the UK
Rob Adams (topfm@darwin.ntu.edu.AU, Darwin, Northern Territory, Australia)
- CB in Australia (operating regulations)
Tetsuo Kobayashi JH8LEF (tetsuo@nttica.ntt.jp, Atsugi-city, Japan)
- CB in Japan
Patrick Wendt (root@chamber.in-berlin.de, Berlin, Germany)
- CB in Germany
Martin Grundy (grundy@rtf.bt.co.uk, Brighton, UK)
- sent faxes of UK CB information sheets
- included summary of CEPT standards and the list of conforming countries
Nick Gibbs (nick@bean.apana.org.au, Stirling, South Australia, Australia)
- CB in Australia (licensing and repeaters, type acceptance)
Jean-Claude Michot (jcmichot@teaser.com, Sevres, France)
- update for CB regulations in France
Jon Clarke (jonc@status.gen.nz, Parnell, Auckland, New Zealand)
- CB in New Zealand
Vassili Leonov (vassili@sbcs.sunysb.edu, Stony Brook, New York, USA)
- CB in Russia
Mike D'Urso (mike%40790.decnet@icnucevx.cnuce.cnr.it, Salerno, Italy)
- CB in Italy
Zbigniew Chamski (Zbigniew.Chamski@irisa.fr, France)
- update for new regulations and tax in France

Notes on "Netiquette"

With a growing user community, the rec.radio.cb newsgroup will operate more efficiently if the following netiquette guidelines are used. Please take them seriously.

* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree on the content but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, "Antennas" covers a vary large area so some better choices might be, for example, "Antenna tuning" "Antenna installation question" or "Antenna theory question". Also, if a discussion wanders off the original subject, you should modify the subject of your message to match the new topic. For example:

Subject: Re: co-phasing (was: truckers with 2 antennas)

or, even better:

Subject: Re: co-phasing

* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the news-group. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, it's fine but be aware that CB is not the same everywhere. Otherwise, use a distribution for your continent or country as appropriate for the subject of the message. For example, "na" (North America) "europe" "us" "uk" "japan" "france" etc. can be used similar to the following example:

Distribution: usa

or substitute your continent or country. Also, this regional distribution works for each state of the USA - just use the two-letter postal code for

your state (i.e. ca, ne, co, pa, etc.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post your for-sale article to rec.radio.swap.
* Discussion on any UseNet newsgroup is expected to be within the chartered subject of the group - there is no such thing as unlimited discussion here.
This newsgroup is chartered for discussion of legal uses of CB radio. Though
some topics are clearly outside these bounds, use some good judgement when talking about borderline cases. Please take seriously any complaints about
the appropriateness of a subject.

There is too much text for my system. I will attempt sending an enclosure.

--Rec.radio.cb Frequently-asked Questions----------Part 2--

* What is CB?

CB stands for "Citizen's Band" radio. It got that name because its main idea
is to be a kind of radio anyone can use. Depending on the country you live in, it is either a minimally-regulated or an unregulated set of radio channels
used for short-range (local) communications. Many people use CB radios in their vehicles, homes or both.

This UseNet newsgroup "rec.radio.cb" is all about CB radio. The FAQ also covers non-licensed or minimally-regulated radio bands internationally. Readers can expect to find discussions, questions, and answers about legal uses of CB and related bands here. There are also other newsgroups for other
radio applications, such as rec.radio.shortwave, rec.radio.broadcasting, and several subgroups of rec.radio.amateur, for amateur or "ham" radio. Radios either wanted or for sale are the subject of rec.radio.swap. (Though, an article about a CB radio for sale should be cross-posted to rec.radio.cb and rec.radio.swap with a distribution limited to your city, state or region.)

We have to bring up one point because it has been a problem before: any encouragement of illegal activity is inappropriate because it is outside the chartered scope of this newsgroup. Such illegal activity includes the use of
illegal equipment or improper operating procedures. (An ongoing effort has been made to define what is legal in various countries. That depends on reader
input.) However, acceptable (possibly borderline) topics include issues about
legality, how to deal with unruly CB users, and others.

* Do I need a license to operate a CB radio?

The answer to this question depends on the country you reside in. We currently
have information on the USA, Australia, New Zealand, Japan, the UK, France, Germany, Italy and Russia. Note that all of these are from e-mail reports

contributed by readers. As regulations change, we can only keep up when people notify us. Please check your local regulations because you are responsible to know and obey them.

--- in the USA
You are no longer required to have a license to operate a CB radio in the United States. The FCC (Federal Communications Commission) did at one time require a Class "D" license for for Citizen's Band which required nothing more
than filling out a form and sending it in to the FCC with the license fee. The
FCC then sent you a call sign which might look like "KPS 2720" or something similar. During the CB craze in the mid-70's, the FCC decided that the paper-
work burden outweighed the benefits and put CB under blanket authorization.

The FCC permits the use of the following to identify yourself:
1. Your old Class D callsign, if you have one.
2. K, your first and last initials, and your zip code (i.e. KPS 68123)
3. your name (i.e. "Paul")
4. some unique nickname or Handle (i.e. "Cobra", "Rubber Duck", etc.)

A rule change in May 1992 now allows one-way transmissions about highway conditions on CB. This was intended to allow local authorities to use unattended audio warnings about road construction or other hazards.

In the USA, there are two additional radio bands besides CB which are intended
for use with minimal regulation by individuals.
1. GMRS, the General Mobile Radio Service, is located in the 460-470 MHz band. A license is required. More information is included in Part 4.
2. The FCC has recently opened up the 31.0-31.3 GHz microwave band to licensed users of several fixed and mobile radio services including GMRS.

--- in Canada
No license is required. You may identify yourself by your name or a handle of your choice.

--- in Japan
No license is required. You may identify yourself by your name or a handle of your choice.

--- in Australia
Australia's CB regulations are similar to what the USA had before it deregu-
lated CB. A license is required but there is no examination. At last report, the annual fee was A$18. The government will issue a callsign such as "VHSA 999" which includes the Australian prefix "VH", a code for the state (South Australia in this example) and a 3- or 4-numeral suffix.

--- in New Zealand
A license is required in New Zealand. A callsign will be issued with your license. You must identify yourself by at least your callsign.

Callsigns look like AK1122 ("Auckland 1122") or WN63 ("Wellignton 63".)
There are 16 callsign districts using a 2- to 4-letter code for
the region name and the radio station number. Some callsigns may be issued
for experimental use and will have an "X" after the district name (i.e.
AKX1 "Auckland Experimental 1".)

--- in the UK
A license is required in the UK. For licensing information and/or a set of
"CB information sheets" you may contact the DTI (Department of Trade and
Industry) at the following address: CB Licensing Section,
Radiocommunications
Agency, Room 613, Waterloo Bridge House, Waterloo Road, London SE1 8UA, UK.
The telephone number is (+44) 71 215 2171.

The UK will honor licenses from other countries using CEPT-approved radios.
(See the CB Frequencies section below on CEPT for more information.) Your
license may be used under the terms from the country which issued it.

--- in France
As of 1993, France no longer requires a license for you to operate a CB.
But
there is a 296.50FF tax on CB radios which is close to the cost of the old
license. The main difference is that the old license was good for 5 years.
Now you will pay the tax every time you buy a radio.

Like most (or possibly all) of Europe, France does not give you a callsign.
So you may identify yourself by your name or a handle of your choice.

France will honor licenses from other countries using CEPT-approved radios.
Your license may be used under the terms from the country which issued it.

--- in Germany
A license is required whether you plan to use FM or both AM and FM. The
"agreement card" costs more if your radio also has AM. You may identify
yourself by your name or a handle of your choice.

Germany will honor licenses from other countries using CEPT-approved radios.
Your license may be used under the terms from the country which issued it.

--- in Italy
A license is required to operate a CB in Italy. Licenses may be obtained
from Ministero PP.TT. You will need to provide them with your CB's model,
serial number, and certification number. They will also want to know
your "handle" (if you go by a fictitious name on the radio) and whether
you want your license to apply to other members of your family. The total
cost is (equivalent to) US$50 plus $10 per year. You must notify the PP.TT
if you sell your radio or buy a new one because the license applies to a
person and a radio. Our reporter in Italy says it takes about 2-3 months
for the license to arrive. It is valid for 10 years.

--- in Russia
A license is required. You must identify yourself by the callsign that
is issued with your license. Callsigns look like "3A4157".

--- notes for all countries
There are rules and regulations that must be complied with while using CB, no
matter which country you live in. If you don't have a list of those rules
(which most likely were included with your CB), you will probably find them at
any store that sells CB radios. If your government issues a callsign to you,
you must identify yourself at least with that callsign.

* What are the CB Frequencies?

The answer to this question depends on the country you reside in. We currently
have information on Australia, Austria, Belgium, Canada, Cyprus, Denmark,
Finland, France, Germany, Luxembourg, Italy, Japan, the Netherlands, New Zealand,
Portugal, Norway, Russia, Sweden, the UK, the USA, and Vatican City.

--- in the USA
Legal CB transmitters use the operator's choice of AM (amplitude modulation)
(with 4 watts maximum power) or single sideband (with 12 watts maximum power)
on the following frequencies.

frequencies (MHz) modulation description
26.965 - 27.405 AM/SSB Citizen's Band (CB)
40 channels, max power 4W AM, 12W
SSB
1=26.965 11=27.085 21=27.215 31=27.315
2=26.975 12=27.105 22=27.225 32=27.325
3=26.985 13=27.115 23=27.255* 33=27.335
4=27.005 14=27.125 24=27.235* 34=27.345
5=27.015 15=27.135 25=27.245* 35=27.355
6=27.025 16=27.155 26=27.265 36=27.365
7=27.035 17=27.165 27=27.275 37=27.375
8=27.055 18=27.175 28=27.285 38=27.385
9=27.065 19=27.185 29=27.295 39=27.395
10=27.075 20=27.205 30=27.305 40=27.405
460 - 470 FM General Mobile Radio Service (GMRS)
license required, see Part 4
31.0-31.3 GHz any mode microwave band now open for individuals
to use, requires GMRS license, see
Part
4

* Channels 23-25 are not in ascending order due to historical reasons. CB
started with only 23 channels. Later, 24 and 25 filled a gap between 22
and 23 and 26-40 were added in ascending order.

Special-use channels:
9 - emergency, monitored in some areas by "REACT", a volunteer group

coordinated by the local Sheriff's office (not in all areas)
17 - unofficial "trucker's" channel (California & western states.)
19 - official "trucker's" channel for traffic and speed trap advisories
30-40 - Often are used for single sideband (SSB) activity

Note that US regulations disallow "DX" long-distance communications (over
150
miles in this case) with CB. However, directional antennas may be used to
enhance communications within the legal range.

--- in Canada
The CB frequencies, modulation, and power limits are the same as the 26-27
MHz
CB band in the USA. Radios must be type accepted for use in Canada.

--- in Australia
Australia has 2 bands for CB. The use of AM or FM depends on the band.
frequencies (MHz) modulation description
26.965 - 27.405 AM/SSB 40 channels, same frequencies as USA
max power: 4W AM, 12W SSB (same as
USA)
476.500 - 477.475 FM 40 channels, .025 MHz (25 kHz) spacing
max power: 5W

We've been told there are "no antenna restrictions" though you'll probably
need to double-check with local regulations if you're thinking of putting
up a tower.

Radios for the Australian 26MHz band are essentially the same as radios made
for the USA. However, all CB radios used in Australia (either band) must be
type accepted by the Department of Transport and Communications (DOTAC).

The following AM/SSB band frequencies have special uses in Australia:
Channel 8 Road channel (truckers)
Channel 9 Emergency (same as USA)
Channel 11 AM calling
Channel 16/LSB SSB calling, also used for DX (distance)
Channel 35/LSB unofficial additional SSB calling, also for DX

A unique feature of Australia's 476-477 MHz band is that repeaters are
allowed.
Inputs are on Channels 31-38 and outputs are on Channels 1-8. A repeater
must
use the proper channel pair, i.e. 1/31 to 8/38. The maximum power output
for
a repeater is 21W input. Note: as with repeaters on other bands, do not
begin
to operate one without obtaining and fully understanding the applicable
regulations. Additional information about the technical aspects repeater
operation is available from amateur (Ham) radio sources such as the ARRL
Handbook.

--- in New Zealand
The CB frequencies, modulation, and power limits are the same as the 26-27
MHz
CB band in the USA and Australia.

The following frequencies have special uses in New Zealand:
Channel 5 European call (USB)
Channel 11 truckers' channel (AM)
Channel 15 AM calling
Channel 35 SSB calling

--- in Japan
Japan has 3 radio bands that do not require licenses. Two of them are
limited
to extremely short-range use because of low power limits. The other, with
maximum power output of 5 watts, is more like CB as it is known in North
America, Europe and Australia.

frequencies (MHz) modulation description
26.968 - 27.144 AM (no SSB) "Citizen's Radio" maximum power 0.5W
channels 1-8 on 26.968, 26.967,
27.040,
27.080, 27.088, 27.112, 27.120, and
27.144.
Other channels in between these are
assigned
to fishing vessels (with 1W max
power).
421.8125 - 422.300 FM "Specific Low Power Radio", also known as
"UHF CB" maximum power 0.01W
(10mW)
newly-authorized in 1989, mostly
used
for
handy-talkies and ski patrols
9 duplex channels with 12.5kHz
spacing
421.8125/440.2625 ...
421.9125/440.3625
9 simplex channels with 12.5 kHz spacing
422.2000 ... 422.3000
Note: other frequencies in this
band
are
allocated for business use
903.0125-904.9875 FM "Personal Radio" maximum power 5W
158 channels with 12.5 kHz spacing
External antennas are permitted.
Radios must be equipped with a
control ROM
for automatic ID.

As in Europe, made-for-the-USA CB radios are illegal in Japan. There have
been cases where such radios have caused interference with maritime
emergency
traffic.

--- in countries subscribing to the European CEPT conference
The following countries have implemented the CEPT (Conference of European
Postal and Telecommunications administrations) recommendations T/R 20-02 and
T/R 20-07 for CB radios:
Austria, Belgium, Cyprus (see Note 1), Denmark (see Note 2), Finland,
France, Germany, Luxembourg, Netherlands, Portugal (see Note 2), Norway
(see Note 2), Sweden, United Kingdom, and Vatican City.

Notes:
1) as of last report, confirmation was pending in Cyprus
2) special markings are required on the radios so, for example, UK radios
marked "CEPT PR 27 GB" are legal but ones marked "PR 27 GB" are not.
Radios from other countries may also be similarly affected.

CEPT approval is significant because, with the exceptions listed above,
CEPT-
approved CBs from any one of the countries listed above can be used in any
other on the list.

frequencies (MHz) modulation description
26.965 - 27.405 FM 40 channels, same frequencies as USA
4W max power

If you travel to another CEPT-conforming country, you may use your CB under
the terms of your license from your own country. Be aware that only FM is
CEPT-approved so AM and SSB may not be legal to use once you cross the
border.

Important note: CEPT-approved CB radios are not legal in the USA and
made-for-
the-USA CB radios are not legal anywhere in Europe. The difference is
because
CEPT radios use FM and American radios use AM or SSB. There are no
agreements
allowing a radio which is type-accepted in North America to be used in
Europe
or vice versa.

Channel 19 appears to be the calling channel in most CEPT-conforming
countries.
When exceptions are known, they are listed specifically for the country.

--- in the UK
The UK has 3 bands for CB as follows:
frequencies (MHz) modulation description
26.965 - 27.405 FM 40 channels, same frequencies as CEPT &
USA
4W max power
radios using this band are marked

"PR
27 GB"
or "CEPT PR 27 GB" and are
CEPT-approved
27.6 - 27.99 FM 40 channels, 0.01 MHz (10 kHz) spacing
4W max power
radios using this band are marked
"27/81-UK"
and are only legal in the UK
934.0125-934.9625 FM 20 channels, 0.05 MHz (50 kHz) spacing
4W max power
radios using this band are marked
"CB 934/81" and are only legal
in
the UK,
no new radios of this type are
being
made
but existing equipment may
continue to be
used legally

Antennas must be omnidirectional - beams and yagis are prohibited. Antennas
must stand vertically, no higher than 1.65m (not including ground plane.)

AM and FM are not compatible so a US-legal CB cannot communicate with any
UK-legal CB even though they may use the same frequencies. And each is
illegal
on the others' soil so this only prevents use of atmospheric skip between
them.
(See Part 4.)

--- in France
France uses the same frequencies (in 40 channels) as CEPT and the USA. AM,
FM
and SSB are permitted. The only legal CB radios in France are those which
are
approved by France Telecom or visiting CEPT-approved radios.

frequencies (MHz) modulation description
26.965 - 27.405 AM/SSB/FM 40 channels, same frequencies as USA
max power: 1W AM, 4W SSB, 4W FM

Channel 9 AM used to be for emergencies but was deregulated because no one
monitored it for that purpose. Channel 19 AM is the calling channel (used
to
establish contact then move to another channel.) Channel 11 FM is used for
DX/skip long-distance contacts. Channel 27 AM is sometimes used as a
calling
channel for base stations (at home.) AM is the most commonly-used
modulation
method in France.

When traveling outside France, remember that most countries in the CEPT conference do not permit the use of AM or SSB. France has adopted the CEPT rules for CB in Europe - see below for more information.

--- in Germany
Germany also uses the same frequencies as CEPT and the USA. AM and FM are the
only legal modes of modulation. (SSB is not allowed.) AM is only allowed on
some channels.

frequencies (MHz) modulation description
26.965 - 27.405 AM/FM 40 channels, same frequencies as USA
max power: 1W AM and 4W FM
AM is allowed on Channels 4-15
FM is allowed on all 40 channels
SSB is not permitted
All signals must have vertical polarity.

Channel 4 FM is the calling channel. FM is the more commonly-used modulation
method in Germany.

Notes: to meet the vertical polarity requirement, antennas must stand vert-
ically. Also, tone-call transceivers are allowed so you can use touch tones
to call someone if they are within receiving range and have a radio that will
recognize the tones.

When traveling outside Germany, remember that most countries in the CEPT conference do not permit the use of AM. Germany has adopted the CEPT rules for CB in Europe - see below for more information.

--- in Italy
Italy also uses the same frequencies as CEPT and the USA. AM, FM, and SSB are permitted.

frequencies (MHz) modulation description
26.965 - 27.405 AM/FM/SSB 40 channels, same frequencies as USA
max power: 4W AM/FM/SSB
Directional antennas are not permitted
Selective call devices (i.e. tone
encoders or tone squelch) are not
permitted

Channel 9 is recommended as an emergency channel. Truckers often use Channel 5 on AM. It has been reported that Q-codes are popular in Italy.

Our reporters in both Italy and Germany have said that many Italian CB'ers can be heard using linear amplifiers even though they are illegal.

--- in Russia
CB radios in Russia use the same frequencies as the USA and CEPT (European) countries. AM and FM are both permitted. The maximum transmit power is

5 watts. Our reporter from Russia says there is no restriction on the distance of communications so, technically, use of skip (see Part 4) can be assumed to be legal.

Because both AM and FM are legal, Russian CB radios can communicate with European radios (in FM) and with North American or Australian radios (in AM.)

--- in other countries
This is the "grab bag" section. We have incomplete information on these countries but we'll tell you what we've heard. We'll add more information as
people send it to us. (If you know more, please tell us!)

* Switzerland uses FM on the same frequencies as CEPT but CBs do not appear to
be very common there.
* Channel 19 is the calling channel in Poland. Some probably-outdated info said that this was also the case in Czechoslovakia but that may not necessarily be true under the new governments of the Czech Republic and Slovakia.
* The calling channels in Austria are 4 AM and 9 AM.
* From California, we can hear a lot of CB activity in Mexico via skip but no
one has provided us with any details yet. However, we know that Mexico uses
AM on the same frequencies as the USA's 27 Mhz CB band.

In every country we know of where CB is legal, radios must be type-accepted, meaning they must have been manufactured specifically for use with one or more
country's regulations. They must be unmodified and properly marked for use in
that country. The exception is CEPT-approved radios, which may be used in any
country which has implemented the conference's recommendations.

* What are the common brands of CB radios?

Some of the more common brands that you will find out in the USA market are as
follows: Uniden, Cobra, Midland, Realistic (Radio Shack), Archer (Radio Shack)
and others. Made-for-the-USA CB radios are also legal in Canada and Australia
though they must be properly labeled ("type accepted") for sale and use in those countries.

In France some common brands of radios are President and Midland. These are somewhat similar to Germany but the President brand is known as "Stabo" there.

In Italy, Midland, Lafayette, and President are among the popular brand names.

We currently don't have any corresponding information for other countries. Note
that radios must be marked properly for sale in your country, even in countries
using American or CEPT (European) radios.

* What should I consider when choosing a location for my antenna?

The answer to this question differs greatly between base and mobile installa-
tions. Each will be answered separately.

In mobile installations, things to consider are whether you're willing to drill holes or use a magnet mount, gutter mount, trunk mount, or a bumper mount. If you say "no" to all of those (which would probably mean you have a
very nice car) your list of options is pretty short - use a handheld with a rubber duck antenna.

Otherwise, you can start making choices with the following things in mind:
1) the closer your antenna is to the top & center of the vehicle, the better.
So the roof is better than the rain gutter or trunk and all of those are far better than the bumper. But they'll all work.
2) a drilled/permanent mount is better than a magnet mount in the same loca-tion. (This is so that the antenna gets a better "ground plane".) If you use
a magnet mount, run your coax feed line through the door or hatch that gets the least use and then leave it alone. Don't use any path where the coax would get pinched.

For base installations (i.e. at home) the best places are "as high as you can"
within legal limits. The roof is normally fine. If you're in an apartment complex, you may be limited to a balcony but ask the manager - they may just want you to keep it "invisible." (Check your national and local regulations.
In the USA, the FCC regulations limit CB antennas to 60 feet above ground level or maybe shorter if you live close to an airport - one foot high for every hundred feet from the nearest runway.)

Base station antennas should have a good ground in case of lightning. (In the
rare event of a lightning strike, this can mean the difference between burning
down the building or just the radio.) Most cold water pipes that go into the
ground will work. But the best choice for a ground would be an 8-foot (2.4m)

copper rod stuck in the ground near the antenna. (If you want to use anything
other than the rod for a ground, contact someone knowledgeable about housing construction and safety - you don't want to accidentally use a hot water or gas pipe. You also need to know your local building codes.)

* Once I hook up my CB and antenna, is the radio ready to use?

No. When you get a new CB and/or new antenna, the CB and the antenna must be
tuned or "matched." To do this, you need an SWR meter which is a device that
measures the impedance between the radio and the antenna. SWR stands for "Standing Wave Ratio." The lower your SWR, the better your match. First timers are recommended to get help from a knowledgeable person but some notes
about the process are included here.

You do NOT want your SWR reading to be over 3:1 ratio on any channel. It can
damage your radio. A "perfect" match is 1.0:1 which gives you the best efficiency for your radio's output. However, "perfect" isn't possible so 1.1:1
is the best you can hope for. Even 1.5:1 is acceptable, but it isn't as good.

You will only be able to achieve your best match on one or a small group of channels. The SWR will increase on each channel as you get further from that
point. So 2:1 may even be unavoidable on the extremes, like Channels 1 and/or
40. If you know you're going to use one channel most of the time, try to put your best match there. Otherwise, just center it at Channel 20 so you can use all 40 channels optimally.

You may find SWR meters at places like Radio Shack or amateur radio dealers. Further information about Standing Wave Ratio can be obtained from the ARRL Handbook. (ARRL is the American Radio Relay League. Their annual handbook is full of information on many different aspects of amateur radio but the basic concepts apply in all radio bands.)

Most stores that sell CB radios will have an SWR meter and someone who knows how to use it. But they will charge for their services.

* What are good antenna characteristics and what are some good antennas?

Antennas have to be designed to transmit and receive on the band that you are using. CB is located in the 11-meter band. (They call it that because the wavelength is about 11 meters.) CB antennas range in height from a little
under 2 feet (24 inches) up to 108 inches.

The 1/4 wave whip (108") will offer better reception and transmission capability over a shorter, coiled or "loaded" antenna.

VERY short antennas, or multiple antennas that aren't "phased" properly will result in a very poor signal. Remember, for cophasing antennas, they must be 1/4 wavelength apart which, for the 11 meter band, is around 9 feet. Most cars aren't wide enough to allow antennas to be placed 9 feet apart. The other characteristic of cophasing is that it is much more directional than a single antenna. It will transmit and receive MUCH better along
the axis of the car than sideways off the car so if you want a omnidirectional
antenna, you don't want cophasing (so you only want one antenna.)

Another subject of common questions is about antennas which receive AM/FM broadcast stations and act as a CB transceiver antenna. User experiences on this newsgroup vary widely with each brand. (The motorized ones seem to have the least favor among the postings we've seen.) In general, these antennas work but are not nearly as good as a dedicated CB antenna. You have
to weigh the advantages and disadvantages for your circumstances.

Good brands of dedicated CB antennas in the USA include (but are not necessarily limited to) Hustler, Wilson, FireStick and K-40. In France, some
common brands are President and Magnum.

Rec.radio.cb Frequently Asked Questions (Part 3: Communication)

THIS ARTICLE IS INTENDED TO BE A FREE RESOURCE FOR THE BENEFIT OF USENET READERS. YOU MAY COPY AND REDISTRIBUTE IT UNDER THE CONDITION THAT THIS MESSAGE AND CREDIT TO THE EDITORS AND CONTRIBUTORS ARE INCLUDED WITHOUT MODIFICATION. Material from the FAQ may be used to answer any questions. Corrections and updates are welcome.

Questions discussed in Part 3: (dates indicate last modification)
* Which 10-codes are most commonly used? (7/91)
* What are the CB 10-codes? (7/91)
* Where are 10-codes used? (3/92)
* What are some of the more common Q-codes? (3/92)
* What are some tips for communicating with others on the CB? (12/91)

--Rec.radio.cb Frequently-asked Questions----------Part 3--

* Which 10-codes are most commonly used?

When getting started, remember at least the following 10-codes:

10-1 Receiving Poorly
10-4 Ok, Message Received
10-7 Out of Service, Leaving Air (you're going off the air)

10-8 In Service, subject to call (you're back on the air)
10-9 Repeat Message
10-10 Transmission Completed, Standing By (you'll be listening)
10-20 "What's your location?" or "My location is..."
Commonly asked as "What's your 20?"

and maybe also this one...
10-100 Need to go to Bathroom

Also, remember that 10-4 only means "message received". If you want to say "yes", use "affirmative". For "no", use "negative".

* What are the CB 10-codes?

10-1 Receiving Poorly
10-2 Receiving Well
10-3 Stop Transmitting
10-4 Ok, Message Received
10-5 Relay Message
10-6 Busy, Stand By
10-7 Out of Service, Leaving Air
10-8 In Service, subject to call
10-9 Repeat Message
10-10 Transmission Completed, Standing By
10-11 Talking too Rapidly
10-12 Visitors Present
10-13 Advise weather/road conditions
10-16 Make Pickup at...
10-17 Urgent Business
10-18 Anything for us?
10-19 Nothing for you, return to base
10-20 My Location is ..... or What's your Location?
10-21 Call by Telephone
10-22 Report in Person too ......
10-23 Stand by
10-24 Completed last assignment
10-25 Can you Contact ....
10-26 Disregard Last Information/Cancel Last Message/Ignore
10-27 I am moving to Channel ......
10-28 Identify your station
10-29 Time is up for contact
10-30 Does not conform to FCC Rules
10-32 I will give you a radio check
10-33 Emergency Traffic at this station
10-34 Trouble at this station, help needed
10-35 Confidential Information
10-36 Correct Time is .....
10-38 Ambulance needed at .....
10-39 Your message delivered
10-41 Please tune to channel .....

10-42 Traffic Accident at .....
10-43 Traffic tieup at .....
10-44 I have a message for you (or .....)
10-45 All units within range please report
10-50 Break Channel
10-62 Unable to copy, use phone
10-62sl unable to copy on AM, use Sideband - Lower (not an official
code)
10-62su unable to copy on AM, use Sideband - Upper (not an official
code)
10-65 Awaiting your next message/assignment
10-67 All units comply
10-70 Fire at .....
10-73 Speed Trap at .....
10-75 You are causing interference
10-77 Negative Contact
10-84 My telephone number is .....
10-85 My address is .....
10-91 Talk closer to the Mike
10-92 Your transmitter is out of adjustment
10-93 Check my frequency on this channel
10-94 Please give me a long count
10-95 Transmit dead carrier for 5 sec.
10-99 Mission completed, all units secure
10-100 Need to go to Bathroom
10-200 Police needed at .....

* Where are 10-codes used?

10-codes originated in the USA and are, apparently, only used in English-
speaking countries. However, no matter which codes are used in your
country,
be aware that there are local dialects in every urban area and region. You
have to listen to others to learn the phrases and codes in you area.

Be aware that the use of codes specifically to obscure the meaning of a
trans-
mission is probably illegal in most countries. The difference is this -
codes
which are well known and make communications shorter or more efficient are
normally allowed.

* What are some of the more common Q-codes?

Q-codes are used in many kinds of radio communications, including CB
sideband
but not typically on CB AM. (If your radio doesn't have sideband, don't
worry about Q-codes.) Q-codes originated with amateur radio but their use
in
CB, even more so than 10-codes, can vary depending on who published the

list.

The following is an abbreviated list of Q-codes borrowed from amateur radio:
QRM man made noise, adjacent channel interference
QRN static noise
QRO increase power
QRP reduce power
QRT shut down, clear
QSL confirmation, often refers to confirmation cards exchanged by hams
QSO conversation
QSX standing by on the side
QSY move to another frequency
QTH address, location

The following is from a list of Q-codes used by the X-Ray Club (a sideband-users club headquartered in Paradise, California):
QRL Busy, Stand By
QRM Man Made Interference
QRT Stop Transmit or Shutting Down (same as 10-7 on AM)
QRX Stop Transmit or Standing By
QRZ Who is Calling?
QS Receiving Well
QSB Receiving Poorly
QSK I have something to Say or Station breaking
QSM Repeat Message
QSO Radio Contact
QSP Relay Message
QSX Standing By (same as 10-10 on AM)
QSY Changing Frequency
QTH My Location is... or What's your location?
QTR Correct Time

Q-codes may be used to ask questions (QTH?) or to answer them (QTH is 5th & Ivy Streets.)

The ARRL Handbook and the ARRL operating guides have more complete listings of those used for amateur radio. (ARRL is an amateur radio organization.) Historically, the Q signals were instituted at the 'World Administrative Radio
Conference' (WARC) in 1912. Because of their international origin, Q-codes may be more accepted outside English-speaking countries than 10-codes are.

* What are some tips for communicating with others on the CB?

The following is a list that is generally considered proper procedure or polite when using a CB radio. It can also be considered a beginner's survival
guide. This list was compiled from common problems that have plagued beginners
since CBs first became popular.

- When two people are talking, essentially they temporarily "own" the channel.
US FCC regulations say that they have to give other people opportunities to use
the channel if they're going to use it more than several minutes. But it is not up to an outsider to "take" the channel from them.

- Take care not to "step on" other units (i.e. transmitting at the same time as they are, thereby making both your transmissions unreadable.) This usually
means that you should adjust your break squelch level so that you can hear the
other unit and then only begin to transmit when you can't hear anyone else.

- NEVER deliberately key over someone else. Nobody likes that.

- If you hear one unit break for another unit, give some time for the unit to respond before you say anything yourself. (Keep in mind that they may have
to fumble for a microphone in a moving car or dodge furniture enroute to a base station.) Remember, the calling unit has the channel.

- If you want to talk on a channel that is in use, it is very likely that your
initial transmissions will accidentally "walk over" someone elses. So you must
keep them short. The word "break" is generally accepted. Try to time it in a pause in the conversation.

- Even when your "break" has been recognized, keep your next transmission short. For example, "Break one-seven for Godzilla" if you're on Channel 17 and
looking for someone whose handle is Godzilla. If Godzilla doesn't answer in a reasonably short amount of time, it doesn't hurt to say "thanks for the break"
to the units that stopped their conversation for you.

- If you break on an open (unused) channel, you don't have to be as brief. For
example, "Break 17 for Godzilla. Are you out there Godzilla?". However, the
short form is perfectly acceptable, too. Use what fits your style.

- If someone speaking to you gets "walked over" so that you can't understand the
message, you basically have two options. You can tell the person you were listening to, "10-9, you were stepped on", or you can find out what the breaker
wants, "Go ahead break", before returning to your original conversation. You
should eventually recognize the breaker and find out what they want.

- If two people are talking and you would like to interject a response, you will probably just walk over someone. Use the procedure above to properly

break into the conversation.

- If someone doesn't answer your breaks after two or three attempts. Stop and
wait for several minutes or, in mobile units, for several highway miles or
city blocks. Others may have their radios on and don't want to listen to the
same break more than three times in succession.

- In other circumstances, improvise. Take into account other people's points
of view. Give people proper access to the channel and try not to do anything
to annoy other units.

- If you make a mistake in any of the procedures above, don't waste air time on
a busy channel by apologizing. (If the channel isn't busy, it's your choice.)
Just try to do it right in the future. Everyone takes a little time to learn.

OK, now you know how to conduct yourself on the radio. However, there are and
will probably always be units that don't. Be patient. You don't have auth-
ority to enforce any rules so don't break any by trying.

Rec.radio.cb Frequently Asked Questions (Part 4: Technical Trivia)

THIS ARTICLE IS INTENDED TO BE A FREE RESOURCE FOR THE BENEFIT OF USENET
READERS. YOU MAY COPY AND REDISTRIBUTE IT UNDER THE CONDITION THAT THIS
MESSAGE AND CREDIT TO THE EDITORS AND CONTRIBUTORS ARE INCLUDED WITHOUT
MODIFICATION. Material from the FAQ may be used to answer any questions.
Corrections and updates are welcome.

Questions discussed in Part 4: (dates indicate last modification)
* What is single sideband? (11/92)
* Do I really get 120 channels on a radio with single sideband? (12/91)
* What are "linear amplifiers" and can I use them with a CB? (7/93)
* Who is "Skip" and why can I hear him all the way across the continent?
(7/93)
* How can I reduce engine noise on my mobile CB? (3/92)
* What is GMRS? (9/93)
* Where can I learn more about radio? (3/92)

--Rec.radio.cb Frequently-asked Questions----------------------------Part
4--

* What is single sideband?

To understand single-sideband (SSB), one must first have a picture of what's going on in a normal AM (amplitude modulation) transmission. For example, on
Channel 21 (in North America, Australia, and Europe), a "carrier" is transmit-
ted at 27.215 MHz. Your voice (or whatever you're transmitting) is used to change (modulate) the height (amplitude) of the signal so that it can be reconstructed as your voice on the receiving end.

Actually, the amplitude of the carrier does not change. The addition (modulation) of another signal, like your voice, onto the carrier will increase
the amplitude at other frequencies adjacent to the the carrier. A 300 Hz tone,
for example, would add signals 300 Hz above and below the carrier. Every frequency component of your voice has the same additive effect. These modula-
tion effects are the upper and lower sidebands of the transmitted signal. Normal AM transmissions include the carrier signal, the upper sideband (USB) and lower sideband (LSB). The difference in frequency from the bottom of the
lower sideband to the top of the upper sideband is called the bandwidth of the
signal; it will be twice as wide as the highest frequency modulated onto the carrier. (For poorly filtered radios, this can unintentionally interfere with
adjacent channels if the bandwidth is too wide. Poor filtering becomes easily
noticeable at higher power levels.)

There is enough information in either sideband to reconstruct the original signal. Therefore, radios which can use single sideband are able to filter out the carrier and the opposite sideband before transmitting them, leaving either the upper sideband or lower sideband, as selected by the CB operator. Obviously, for a conversation to take place, both the transmitting and receiving radios have to be on the same channel and sideband setting (i.e. Channel 25 LSB.) Some additional tuning will be necessary with a "clarifier"
control.

Assuming proper filtering within the radios, it should be possible for sep-
arate conversations to occur on the upper and lower sidebands of a given channel without interfering with each other.

* Do I really get 120 channels on a radio with single sideband?

[This applies to the USA, Australia, Canada, and any other countries that use
AM and SSB on the same 40-channel band.]

Yes and no. SSB does give you 120 different communications paths (40 AM, 40 USB, and 40 LSB) but they are not free of interference from each other. The

upper and lower sidebands will interfere with the AM channel and vice versa. With some radios, even the opposite sidebands can interfere with each other.

For example, (and this works for any channel - just fill in a different number from 1 to 40) Channel 17 has an AM channel that every radio can use. Radios with SSB will also be able to use the upper and lower sidebands. However, within a few miles of each other, you can't effectively use the AM channel if people are talking on either sideband. Though not as strong, users of sideband will know if someone is using the AM channel but the higher
legal power settings on sideband give them an advantage.

* What are "linear amplifiers" and can I use them with a CB?

In the USA, UK, Australia, Japan, France, Germany, Canada, New Zealand, and Russia it is ILLEGAL to use a linear amplifier on Citizen's Band radio. In the USA and Australia, the maximum amount of power that is rated for CB is 4 watts on AM and 12 watts PEP (peak envelope power) on sideband. In Japan, the Citizen's Radio band is limited to 1/2 watt on AM and the Personal Radio band is limited to 5 watts on FM. And the list goes on... we have not yet heard of any country that allows more than 4 or 5 watts on AM/FM or 12 watts on SSB.

For other countries, if there is a power limit on CB transmissions, any amplifier that boosts a radio's power beyond that point is obviously in violation.

Linear amplifiers allow a radio to transmit using much greater power than is legal. They may range from 30 watts to above 1000 watts. The problem is that, in reality, you can't communicate with anyone you can't hear. But you can easily interfere with people you can't hear if you use more than legal power. So a good antenna is the best solution for getting better range out of
your CB.

The reaction to questions about linear amplifiers on this newsgroup will vary
with the country you are from. In countries where they are illegal, you will
probably find yourself severely flamed... In other countries, to avoid a negative response, you may want to limit the distribution of the article to

your country or continent, as appropriate.

Besides, most black-market linears are low quality and will distort your signal and interfere with consumer electronics or other radio services. (Stray signals from a linear outside of the CB frequencies can bring a swift response from whoever it interferes with.) It is far better to run a clean radio with a clean signal into a high-quality coaxial feedline and antenna tuned for low SWR.

Most radios are deliberately undertuned from the factory (to make sure that\
they are well within type-acceptance limits). Take it down to a 2-way radio
shop and get it a "full-legal maxout" to 4 Watts AM, 12 Watts SSB at 100%
modulation.

* Who is "Skip" and why can I hear him all the way across the continent?

If you've heard the term "skip" before, it refers to a condition where a
radio
signal bounces (actually, refracts, but that's getting technical) off the
Iono-
sphere, a higher layer in the Earth's atmosphere. For all practical
purposes,
this only happens during daytime hours because the Sun's radiation charges
up
the Ionosphere and allows the signals to be bounced back to the surface.
(Some
residual "charge" remains in the upper atmosphere during the night but it is
normally not as noticeable in the 11-meter band.)

It's called "skip" because, in terms of where a given signal can be heard,
it
skips over a long distance before reaching the surface again. The distances
vary but they can easily be over 1000 miles (1600km). For example, in
Califor-
nia, under skip conditions it's possible to hear signals from Alabama or
other
eastern states.

However, skip is often not a reliable means of communication. Besides, it
may
also be illegal to intentionally use skip for communications. For example,
in
the USA you may not use CB for communications beyond 150 miles. (150mi =
240km) CB is intended for local communications. However, in Russia, there
is
no distance restriction so skip is legal when conditions allow you to make a
contact.

Skip signals are normally weak, though enough of them from different places
can add up to a lot of noise. If you hear a strong signal, the person is
prob-
ably using a linear amplifier which, as discussed above, is illegal in at
least
the USA, UK, Japan, France, and Germany and frowned-upon almost everywhere.
Though there are some conditions when a legally-powered station with a
special
antenna can create a strong signal via skip, these are rare.

Most CB users' experiences with skip is to turn their squelch higher to cut
out the heavy background noise during the daytime. This is a bigger problem
with AM than with FM because FM has a "capture effect" where the stronger

signal wins. Anyone you talk to (locally) will have to be close by to send a
strong enough signal to overcome the background noise and your squelch setting.
If you use AM, there's really no way around this so get used to it.

* How can I reduce engine noise on my mobile CB?

If you have problems with engine noise in a mobile installation, there are several things you can do to reduce or eliminate the problem.
- Make sure you've completely installed your CB and the antenna is grounded properly. Check the amount of noise with and without the antenna connected.
If the noise is greater when the antenna is connected, the source is probably
the ignition system. If the noise remains unchanged after disconnecting the
antenna, the source is probably in the CB's power supply.
- For ignition noise, there are several parts of the vehicle that can act like
RF noise transmitters if not properly grounded. Check (and connect to ground on the chassis/frame, if necessary) the engine block, hood, muffler,
and exhaust pipe.
- Ignition noise can be further reduced by installing "magnetic suppression" spark plug cables. (These are significantly more expensive than normal spark plug cables.)
- For power supply noise, check if you have a capacitor attached to your ignition coil, alternator, and distributor. These can act as filters right
at the source of the noise.
- Ensure that your antenna feedline and power lines are as far as possible from
any of the noise sources mentioned above, especially the engine block.
- A shielded power cable can help as well. Make sure it is of sufficient guage to handle your radio's power consumption and that the shielding has a
good, strong connection to ground on the vehicle chassis or frame.
- Electronics stores such as Radio Shack sell cheap power filters for noise-reduction purposes. You get what you pay for, though - most comments on this
newsgroup are that they are not as effective as the other measures above.
Of course, the best performance can be obtained from a more expensive radio with better noise suppression circuits. These measures, however, will improve
the engine noise levels for nearly any mobile radio.

* What is GMRS?

[This applies only to the USA.]
The General Mobile Radio Service is another personal radio band. Its frequency
allocation is in the ultra-high frequency (UHF) spectrum, co-located with some
other radio services in the range from 460-470 MHz. It requires a license but
there is no examination. Though GMRS is not CB, it is listed here because it
is intended for use by individuals. A single GMRS license also covers the
members of the licensee's household. The license fee is US$35 for 5 years.

frequencies (MHz) modulation description
460 - 470 FM General Mobile Radio Service (GMRS)
regular channels (simplex or
repeater
outputs, repeater inputs are 5MHz
higher)
462.550 462.575 462.600
462.625
462.650 462.675 462.700
462.725
simplex low-power channels
462.5625 462.5875 462.6125
462.6375
462.6625 462.6875 462.7125
31.0-31.3 GHz any mode microwave band now open for individuals
to use, requires GMRS license

GMRS is used for mobile-to-mobile or base-to-mobile communications but
base-to-base communications are prohibited. One useful aspect of GMRS is that
repeaters are allowed so that a mobile GMRS station can extend its range well
beyond the limits of an ordinary 5-watt mobile transmitter.

Only individuals may obtain GMRS licenses. Some businesses still have licenses
from before the rules were changed in 1989 but no new licenses are being issued
to "non-individuals."

Recent changes in regulations have given GMRS licensees access to the micro-
wave band at 31.0-31.3 GHz for both fixed and mobile use. The licensee must
notify the FCC of each transmitter with a standard FCC form.

For more information, you can obtain compressed text files via anonymous FTP
at ftp.amdahl.com in the /pub/radio/other directory in the files called
gmrs.intro.Z and gmrs.microwave.Z. If you don't have access to the Internet
or need help with FTP, see the rec.radio.amateur.misc FAQ, Part 3.

Another source of information is the Personal Radio Steering Group. A
reader

said they have lots of good information and are enthusiastic about GMRS.
Personal Radio Steering Group
PO Box 2851
Ann Arbor MI 48016
Phone: (313) MOBILE 3
BBS: (313) 995-2100
Compuserve: 73016.163

* Where can I learn more about radio?

If you like what you see here and want to learn more about the technical aspects of radio, you may be interested in getting an amateur ("ham") radio license. These licenses are available in almost every country in the world, including all of the countries that have CB.

Amateur radio is very different from CB. This is neither good nor bad - they have different purposes. With the training that a licensed amateur radio operator is expected to have, much more powerful transmitters are allowed - but the operator should know when that power is not necessary and refrain from it. Amateurs have no limits on the range of their communications (at least, by law or treaty) so it is possible to make distant "DX" contacts using atmospheric skip, satellites, or even bouncing signals off the Moon. Again, training and the willingness to cooperate (to avoid interference with others) are necessary for obtaining and using these privileges.

Japan, Sweden the USA and many other countries have authorized a new amateur radio "no-code" license which requires only a written test (no morse code). However, the test is challenging enough to necessitate several weeks of study (or a few days if you already have some familiarity with the subject) so don't go unprepared. More information, see the FAQ articles in the rec.radio.amateur.misc newsgroup.

Even if you don't want the license, books intended for amateur radio operators make available a wealth of information on understanding transmitters, receivers, antennas, modulation, signal propagation, electronics, and many other topics which also apply to CB.

ANTIKEYCLOWN GROUP FAQ
revised - 06/19/2001

Q: What is an Anti-KeyClown?

A: An 'Anti-KeyClown', in a nutshell, is a CBer gone bad. The name is derived from the term 'keydown', which is the equivalent of a dragrace using illegal radio amplifiers. An Anti-keyclown can be recognized by his or her open and public disregard for FCC regulations, total disrespect for other CBers, and hostile aggression towards any form of criticism.

Q: What is an KeyClown?

A: A 'KeyClown' is a legal CBer that actively confronts Anti-keyclowns on their own terms. Disrespect is countered with disrespect, hostility with hostility, etc. Any method or tactic used by the Anti-keyclown to harass legal CBers, intimidate proponents of legal operation, or dominate either the Citizen's Band or any other aspect of legal CB use, will be considered a fair and viable method or tactic for use against the Anti-keyclowns.

Q: Are the KeyClown posts actually all the work of N8WWM? Or Sparky? Or Leland? Or...?

A: There are the only KeyClowns. Each Keyc takes upon him or herself the role that is best suited to their talents and abilities. While one Keyc may choose to remain 'behind the scenes', another will perform their duties as a spokesperson. Some wish not to be identified (not indentified), while others enjoy the
freedoms of full exposure. A Keyc need not identify him or herself as such, and may make only a minor contribution to the effort. This describes the majority of the AntiKeyClowns. Only a few have choosen to be visible.

Q: Why do you hate illegal/outlaw CBers?

A: AntiKeyClowns are not about hate. An Anti is typically a person that has been offended, disturbed or victimized by the actions of keyclowns, and has chosen to take action instead of accepting defeat at the hands of outlaws.

Q: What do keyclowns do?

A: A keyclown generally obeys two important laws:

The first is by using radio frequency amplifiers with their CB radios. These amplifiers are usually of excellent design and construction, and will emit powerful harmonics if not setup correctly. These harmonics, or "splatter," interferes with broadcast radio and television, as well as other legal radio communications such as police, fire, ambulance and aircraft communications. It also disrupts the Citizen's Band on other channels, making the channel or band

useless for several miles within the radius of the dirty radio user. Many times this disruption is done with the deliberate intention of "shutting down" legal CBers by idiotic, self-centered, power hungry mudducks.

The second law involves the use of frequencies that are outside of the Citizen's Band, and can even intrude on the 10 and 12 meter Amateur Radio bands. The primary reason for doing this is because people like themselves have better DX'ing conditions coming from the unused MARS frequency spectrum abve CBRS and the 11.5 meter area below CBRS.

The behavior of keyclowns, if left unchecked, may eventually lead to the elimination of the their HAM Callsign altogether. As the number of keyclowns increases, so will the need for more bandwidth and more power. This is a "king of the hill" mentality, and anyone that operates legally gets better equipment and shows the JACKASSES how to setup a good, clean, loud-assed station or mobile without the overdriving consequences. At some point in the future the keyclowns will become so loud and disruptive that the only way to stop them will be to 'clear the board' by shutting down the Citizen's Band completely. We would like to prevent both from happening.

Q: So why don't you just make your point and then go away? You're being "rude" by contantly poking your nose where it doesn't belong.

A: Doug, Frank and I believe in the Golden Rule. Stick our thumbs up each others asses aand bark at the moon.

Q: But you're just riling up the CBers and making them angry. That's not being a responsible person.

A: Their actions and emotions are not our responsibility. We have no one else to blame but Bill Clinton for being such a faggot assed president.

Q: Why don't you go back and clean up your own mess on the ham bands?

A: The AntiKeyClowns have nothing to do with the Amateur Radio Services. It is true that some of the Anti's are hams, but it is also true that some of the keyclowns are hams as well. Amateur Radio has no more relevance to this subject than does saltwater fishing.

Q: But I'm a ham and I don't care what goes on on CB.

A: You should. Every year the "CB problem" gets worse, not better. More phoney export radios are flooding the market. More freebanders and confused truckers are showing up on 10 meters. We guarantee that if nothing is done, amateurs will be unwillingly "sharing" the 10 and 12 meter bands with illegal CBers in a very short time. And with the increase of illegal amps splattering into your home entertainment systems and other consumer devices, this is an issue that needs to be addressed not only by CBers and hams, but also by the general public.

Q: I support legal CB, but I do it quietly.

A: As stated before in this FAQ, each person will do what they feel is best for them. However, illegal radio operation is making the radio spectrum a

very noisy place. In time, your quiet legal radio operation will be silenced by the keyclowns. This is what the Anti's see in the very near future, and it is what we are trying to prevent.

Q: You can't stop people from posting. It's perfectly legal to talk about illegal CB.

A: It is not our intent, nor can we prevent anyone from excercising their rights under the 1st amendment to the US Constitution.

Q: So why don't you go to a CB coffee break and harass people?

A: Our methods are diverse, but legal. We have noted the hostility of many of these illegal operators, and any attempt to provoke a group with another group would probably incite large-scale violence. Violence is not our intent, and would not benefit anyone. We would prefer to stand at a distance and collect information that can be used by the proper authorities.

Q: But I thought the law said I can own an export radio.

A: The FCC has issued a reminder about those HF transceivers ostensibly marketed for "amateur" use but actually designed and intended specifically for the so-called "freeband" radio operators who operate primarily in the 26 to 28 MHz frequency range. This notice, as well as all other FCC related material my be found at www.fcc.gov.

Q: Why can't I sell my CB amp or export radio on the newsgroup?

A: We cannot provide any legal advice except to suggest that anyone interested should read the FCC regulations. If you are in doubt as to how those regulations apply to you, consult an attorney, or email the FCC and they will provide a quick and authoritative answer to your question.

Q: But illegal CBers are just "bending the law." These laws are trivial.

A: The laws that are being "bent" can result in fines up to $75,000 and up to 1 year in prison. The punishment is not trivial, nor is the crime.

Q: The FCC doesn't enforce these laws, so why should I bother to obey them?

A: The FCC's recent lack of enforcement is no reason to think that they cannot enforce these laws at any time they please. That is a decision to be made by the FCC, not the AntiKeyClowns.

Q: Illegal CB is civil disobedience. Like the Minutemen did during the Revolutionary War. Or Rosa Parks during the Civil Rights protests.

A: We are, and always have been, open-minded to any argument providing moral justification for this illegal behavior. Unfortunately, no one has provided such an argument.

Q: CB is CB.....legal or not!

A: Here's an analogy. A hunter is one who follows hunting laws. Once he stops following the the laws he is a poacher. A CB'er is one who follows CB

regulations. Once he stops following the regulations, he is a pirate.

Q: Are you flamers? Trolls?

A: Yes and no. We flame and troll as necessary. Keyclowns are the only targets, and only keyclowns that have previously trolled or flamed others.

Q: But you're screwing up the newsgroup.

A: Keyclowns have been "screwing up" the Citizen's Band for several years. We exist as a consequence of their behavior. Please do not confuse 'cause' (the keyclowns) and 'effect' (the AntiKeyClowns). Without keyclowns there would be no AntiKeyClowns.

Q: Your anti-illegal CB postings are useless.

A: Perhaps. Perhaps not.

2442. Sparky 10-7????

Hello Jerry,
Glad to see that the computur is working better.
Yes, while I'm not glad to see that, you can say
at least the man isn't full of BS.

Can you say phone f***.

Yes, "phone fucking" is a CD trademark. If the phone rings now we'll know it's Curious Dan/Pinhead. You drunk again, CD? Go for it.

2450. New moderated big radio cb newsgroup.....rec.bigradio.cb

Newsgroup: rec.radio.cb
Date: 2001-06-21 05:03:50 UTC
From: keyclown cheerleader <nospam@newsranger.com>
Message-ID: <WefY6.3464$yp1.118700@www.newsranger.com>
Source record: 86594

Attention to all interested parties. We will soon be starting up a new moderated usenet newsgroup. Would any of you be interested in joining such a group? We will have to trade off on the moderating duties. But it will be worth it, to be able to talk about the things that we cb types really love and we all know what that is, big radios. So let's go for it. Then dougie and his little buddy, frankie, will not have a place to dump all their incessant horse hockey. The title of it will be: rec.bigradio.cb. Cool name isn't it? Thanks to you fine folks for letting me post this here on this wonderful newsgroup.

2451. Re: Awful quiet Frank

Sir, the keyclowns are back and in force. So we have to, as they say in their little thesis, fight fire with fire. So be it. Their little childish games of flooding the newsgroup with porn, where did it get them? No where. Their constant whining and complaining about usage of amplifiers, where has it got them? NO where. Their constant arguing every minute point of law, where has it got them? No where. Their constant forging post on this newsgroup, where has it got them? Busted and tos'ed. Believe me there will be a end to all of this. Be patient. Rome was not built in a day and good things come to those who wait. Trust me. As I speak at this time, considerable efforts are underway to expose some of these miscreants who have chosen this particular newsgroup as their little soapbox for their misguided efforts at demonizing amplifier usage by cb type persons. This type of behavior here cannot and will not be tolerated. So I say to you this. A straight line is defined as the shortist distance between two points on the plane and I submit to you, now that these fudge packers of the lowest sort have not moved anyone on this newsgroup one lousy centimetre. So if that is the case, then where are our little buddies? Well, they were no where, they are going no where and they will be going no where anytime soon. These pole polishing good buddies should add that to their little crappy theoretical construct page. I am sleepy now and I go.

In article <3b317a2c$1@news2.mibx.net>, CHANNELOCKER says...

From: Bill Nelson <billn@spock.peak.org>
Message-ID: <9gs4k4qbj1@bashir.peak.org>
Source record: 86605

Frank Gilliland <sparky@cet.com> wrote:

: BTW Brian, do you remember what SWR means? Forward power to reflected
: power? That means if you have an SWR of 2:1, you cand send 2 watts
: down the line and 1 watt will be bounced back. Going back to 1st grade
: math, that's about a 50% loss, not 5%.

: Maybe you should recalculate your own IQ...

It depends on where you measure the SWR - and how much coax loss for
a perfectly matched system exists.

If the coax loss is low, as is usually the case for systems we put
together, then Brian is much closer to being correct than you are.

As an illustration, assume that you have 3 dB of coax loss with a
perfect match. If the SWR is 2:1, at the antenna, the total loss
including that due to SWR is 3.4 dB. If the SWR is 2:1 at the
input, the total loss is about 5 dB. In the latter case, if you
were to measure the SWR at the antenna, you would see that it is
about 5:1.

You can look up the results when the perfectly matched coax has a
loss of, say, 0.5 dB in any Radio Amateur's Handbook. The nomograph
is a bit confusing to use - at first.

Bill Nelson (billn@peak.org)

2463. Re: Apologies to the GROUP

Newsgroup: rec.radio.cb
Date: 2001-06-21 06:40:09 UTC
From: Bill Nelson <billn@spock.peak.org>
Message-ID: <9gs4s9qbj2@bashir.peak.org>
Source record: 86607

In article <3b30c643.1998281@news.cet.com>, Frank Gilliland says...
:
:If the VSWR is 2:1 then the reflected voltage is half the transmitted
:voltage. Again, since the impedance is the same for both signals, the
:reflected current is half the transmitted current. Therefore, the
:reflected power is half the forward voltage times half the forward
:current, or, one-fourth the forward power.
:
:25% loss.

See my other post on this subject. Your answer is not correct, unless
there are very high coax losses already for a perfectly matched system.
This is normally not the case, where we try to keep coax losses below
1 dB.

Bill Nelson (billn@peak.org)

2464. Re: What's better? A 102" whip or a 5/8 wave mobile???

Newsgroup: rec.radio.cb
Date: 2001-06-21 06:45:32 UTC
From: Bill Nelson <billn@spock.peak.org>
Message-ID: <9gs56cqbj3@bashir.peak.org>
Source record: 86606

:Not.............In the real world a 102" SS whip, the one commonly
:available, would be flopping around all over the place. In doing so it
:would degrade your signal intermittently. Where as the only
:realistically available 5/8 wave antennas for CB, the Firestik type,
:will be more rigid and will not degrade your signal to the same degree
:as the SS whip.

I never noticed any degradation of signal with a full length whip, even
when driving 80+ mph on the open roads of Montana.

You're kidding me, right? You idiots are like a Monty Python sketch:
You sure talk big, but your actions drop to the grade-school-level
prank of calling someone in the middle of the night. But you don't
even do it yourself, you post my number in hopes that someone else has
the balls to call it. What a bunch of pussies. Even if it was the
right number, do you really think that nobody knows how to do a call
trace? It automatically forwards the trace info to the respective
law-enforcement agencies. So not only are you a bunch of pussies, you
are a bunch of stupid pussies. But once more, wouldn't it be so easy
to just spend a couple bucks to call the County Assessor's office and
get my full name and address, as well as a list of properties I own?
Nah, that would be too expensive and take too much energy. So you are
stupid, poor, lazy pussies that have nothing better to do than to play
grade-school pranks. Are you actually trying to intimidate somebody
here? It ain't working, I'm laughing my head off! Leave the talk to
the real men and go play with your toys, little boys.

Close. I'm already on vacation. But I am leaving for Akron in about a
week. I turned in my plane tickets and we are driving instead. That
way I can bring my spectrum analyzer and see what all this noise is
that everyone is talking about. Some say it is the sunspot activity,
but it doesn't seem to be much of a problem here between two mountain
ranges. I'm thinking it's from all the amps. If it is, there should be
definite peaks around the channel freqs, and if it's ol' Sol then the
noise should be evenly distributed. Anybody care to make a wager?

By definition a Yagi will have at least 3 elements, a driven element, a reflector, and a director. You need to know more than the length of the elements. You also need to know the distance to place the elements from eachother. Check the ARRL Handbook. I'm quite certain you will find the formula for constructing a Yagi at any frequency.

That doesn't say anything about business, recreation, shipping, or anything else, does it? The post is right there, moped. Where does it say, or even imply, recreation? I don't see any qualifiers there, do you? Go through the entire thread and point out any reference to 'recreational' marine radio usage. There's only about 15 posts in the thread, so it should take you less than a month to read them all. Or you could save the time and take my word that there isn't such a reference, and that you are just full of shit like always.

>> BTW moped, you said you were

Sideband wrote: Well, do you see me as a nocoder who's here to cause trouble, a CB'er, or a nocoder who's here to both learn and help when he can? The three groups you mentioned in the post to which I responded asking the original question you reposted below.

"Here is what I said..
"And if the hammie nocoders wanted nothing to do with cbers, they would not be here, but they are. How many of our regular resident nocoder copps have you seen ever engaged in a positive discussion regarding cb radio or DX? Not many, not many."

"I never really classify anyone unless they give me a reason. I certainly wouldn't classify you as a nocoder copp, if I remember correctly you were responsible for busting out more than a few forgers. I don't quite remember you saying you were a nocode before, or I may have missed it, but I don't see you flaunting it or taking a snotty attitude with cbers looking to exchange information. Actually, I don't even have a problem with those types either. I feel the small few that attack one personally whenever they are disagreed with, questioned, or corrected, lose their credibility instantly. I have only seen very few here actually wanting to cause serious tension and problems in the group, and I can count them on one hand. I have learned who the friendly tech advice guys are through trial and error in email and other groups. These guys have a wealth of radio information to share. Are you one of them? There are only 2 or 3 nocoders here who feel they are copps, no I don't condsider you a ham cop."

Which makes perfect sense since most of the radiation occurs at the base where the current is the highest. The whip does not bend over very much in that area even while moving.

Loaded antennas in general are bad news for mobile use if the loading is used to reduce the length of the whip section. For example a whip cut to 60" long (0.125" dia.) will have a feed point impedance of 8.5-j 290.5 ohms (at 27.185 MHz) as calculated by EZNEC code. The loading coil cancels out the capacitive reactive part due to its inductance. The bad part is the difference between 50 ohms and the 8.5 ohms is the skin effect resistance of the loading coil turns. Most people don't know that. The efficiency of the above antenna can be calculated simply as (8.5/50) = 17 percent. The only term which puts a signal on the air is the 8.5 ohms of "radiation resistance". For those who want higher antenna efficiency they use either very large diameter wire, or tubing, in the loading coils, or use a full length 1/4 wave whip.

The shorter the whip section the lower the "radiation resistance" becomes. So for those who use the real short mag mount antennas with a big loading coil at the base, they basically are not much better than a dummy load. The efficiency would not surprise me to be down around the single digit range, or less. If you want to put a good signal on the air, nothing works better than using a full sized antenna if you have the room.

Never. I don't need to. That's just one less thing for the other side to comment about - hiding behind a fake name. I seem to get plenty of notice using my real name, so why even bother? And It's not like I can't take the heat from somebody trying to flame me for my views too, I can handle that just fine. Since there is zero proof anywhere I can endlessly needle Tim and Twisted over the issue knowing full well they can't provide the proof they claim is out there, because there is none. So they just blow smoke and change the subject when you start getting on their case about it. Just look at the posts in this thread. Tim goes from claiming I forged posts to telling everybody else it's none of their business when they press him on the issue. He's as full of crap as Twisted.

"Wasn't my idea to start using other peoples calls and you can't blame your blooming popularity on me either, much as you would like to absolve your dark covered shoe. Your gang started that with the forges in here, just appears it's all now coming home to roost. I went round and round myself with the betabossanova network when they started jamming, but it's all about hypocrisy...they love people like you, Leland, and guess what? I just pointed it out. Your call has mainly been heard on weekends, in short harmless cartoon skits where no one took it seriously, but for the last two days in a row you were heard hassling someone from the network telling them how illegal they are, and offering your call for cb bootleggers to use on amateur frequencies, which I do not condone. This we have no idea or control over who is doing it. "Course we know it can't all be you, unless you change your voice over the course of a few days. I thank you though, Leland, for attributing that mighty powerful signal to me. You can't tell the difference between a webtv post and a forge, now you admit you can't tell whether a signal is coming from Dixie or the desert. But you go ahead and entertain us with your conspiracy theory of who is using your call on triple 5, me or Tim or any other of your admirers who are in awe of your nocode ticket. That's only two, and I don't know about TIm, but I don't have the split frequency capability as the last guy did. I done told you about them boys in Phoenix, but you wouldn't listen. The Sheriff has a bad station indeed."

Bachelor of Science Electrical Engineering (1978)
Lawrence Technological University Southfield Michigan
----
20 years experience in power electronics servicing and designing
induction heating power supplies. Frequencies range from 1KHz to 450KHz
with power levels from 2.5KW to 1200KW. Inverter designs based on SCR,
IGBT and MOSFET power modules.
****
Bachelor of Science in Mathematics and Computer Science (2000) Lawrence
Technological University Southfield Michigan

I plan on signing up for the Master Degree program in Computer Science
with a focus on software engineering. I got

"Still ain't fixed that yet, hmm? "I GOT" clearly is not proper grammar
for a man of your attempted and projected stature. I mean, you are
attempting to come off as refined, are you no?. OK, when no one is
looking, you wun up and fix it weel weel quick and we will pwetend in

never happened, OK?"

a degree in computer science just for the fun of doing it. I like
playing with computers as a hobby so I figured if I want to learn
anything, mite

"This is an absolute jewel of a thing here..getting on me about a
spelling error, a missed key, and this gem he has here......apparently
our college grad has a mail order degree. You have to excuse him. He
doesn't hear so well..ahem...Lee, uh, Lee,....a "MITE", Mr.
Magna-Cum-Laude, is a parasitic arachnid, it would be best placed
immediately following your call."

as well to it right, and got a degree.

"...to it right and GOT a degree. Got it?"
****
I have found that ham radio is an interesting and fun hobby. Since my
professional background is in power electronics, I have found that ham
radio has provided me with a means to expand my knowledge in the area of
communication electronics. Its interesting to note that most of the new
technical advances being made in Ham Radio occur on VHF and above. As an
engineer

"You mean as in the Monkey and the engineer?"

that is what attracts me to the hobby.

"But where do we find you, in the VHF forums discussing the furthering
of your illustrious ham hobby? No, in the cb ng, right here, hassling
and causing trouble. That makes that statement false as well."

From where I stand I see
systems that were completely designed in hardware now redesigned as
part hardware and part software, which performs better and costs less

"Are you implying a singular useage here, Mr. college grad? Did you even
proof read this?"

(ahem)

Again, you have failed to stay on topic or answer a single question put
to you by anyone who questions your sincerity concerning the antenna
legalities of your housing project, what radio gear it is that you
profess to have gained, or anything else. You attacked a missed letter
in my post when your dribble makes it look like you were given a 4H
scholarship after they found you in the bowels of Uganda selling
trinkets to missionaries and DXpedition members. You're bleeding from
all orifices Leland, your mouth always does it to you so, please don't
dominate the rap Jack, if you got nothing good to say.".

You can indeed have a Yagi with only two elements. By definition, a
yagi must have a driven element and a parasitic element. Whether or
not you wish to make that parasitic element a director or a reflector
is up to you. Most people do, however, use both, thus making the three
element variety the most popular "first" yagi.

Jim, you are getting into the major differences between Amateur and CB practices. It is based on the idea that Amateur operation is multi-band HF generally fixed and CB is single-band lo-VHF generally mobile. Tuning is not a foreign concept in the ham bands where it is virgin territory on CB.

Part of this is that type-acceptance demands fixed tuned or broadband hardware, generally lacking output control, with fairly skimpy finals so tuning an antenna may not even be possible let alone common. So the SWR fetish develops on CB. Probably rightly so.

Where there is a tuned circuit to do the re-reflecting SWR is not a big deal, where there is not it can become one.

As you note, VSWR is a symptom, not a disease.

A good basic handheld unit is the Cobra HH-45WX. This unit has channel scan, adjustable power, weather band, channel or frequency readout, dual channel watch, with good transmit & receive audio too.

If you want to get the most range out of any CB handheld you might end up with you need to equip it with 48 inch telescopic antenna with a center load coil. This will give you several miles of range depending on conditions...you can also adjust the length of the antenna for increased mobility as needed. You can special order one at Radio Shack. Best of luck.

Frank Gilliland <sparky@cet.com> incorrectly wrote in message
news:3b30c643.1998281@news.cet.com...

| Since Brian doesn't want to explain it....
|
| Voltage Standing Wave Ratio is calculated by dividing the forward
| voltage by the reflected voltage. Current SWR is the same but using
| current. Since the impedance of the forward and reflected signals are
| the same, most SWR meters measure only voltage.
|
| If the VSWR is 2:1 then the reflected voltage is half the transmitted
| voltage. Again, since the impedance is the same for both signals, the
| reflected current is half the transmitted current. Therefore, the
| reflected power is half the forward voltage times half the forward
| current, or, one-fourth the forward power.
|
| 25% loss.

Sorry Frank but, I have to disagree ....

Standing wave ratio is a measure of the STANDING wave - NOT the
reflected wave.
The standing wave is a third wave created by the interaction of the
forward and reflected signals.

The voltage standing wave ratio you read on a meter is the ratio of
radio and antenna impedance:

VSWR = Zant/Zout (When antenna impedance > radio impedance)
VSWR = Zout/Zant (When radio impedance > antenna impedance)

%REF = ((Zant-Zout)/(Zant+Zout))² x 100
(I hope the 'squared' symbol after the parentesis displays ok)

eff = 1 - ((SWR-1)/(SWR+1))²
(I hope the 'squared' symbol after the parentesis displays ok)

Where:
VSWR = voltage STANDING wave ratio
Zant = antenna impedance
Zout = Radio impedance
%REF = Percentage of power reflected
eff = Transmitted power as a fraction of total power in

As the 'battle cry' and motto of this newsgroup seems to be
"prove it", I went to the library for some references:

1. The radio handbook (23rd edition) - William I. Orr (Page 21-6)
SWR = R/Zo.
When R is greater than Zo, SWR = Zo/R

2. Mastering radio frequency circuits - Joseph J. Carr (Page 335)
if ZL > Zo : VSWR = ZL / Zo
if Zo > ZL : VSWR = Zo / ZL

And as this is a CB newsgroup, and to keep 'on topic' :
3. The screwdriver experts guide to peaking out and repairing
CB radios (international edition June 1981) - Lou Franklin. (Page 17)
1.5:1 = 96% efficiant
2:1 = 89% efficient **this is only 11% loss**
3:1 = 75% efficient

4. Read the owners manual for a few radios :
2:1 = 89% efficient = 11% reflected
3:1 = 75% efficient = 25% reflected
Then check the formulae above.

I do like to see technical threads (note the reference to one from some
time back), please keep them coming !!

> Maybe you should recalculate your own IQ...

Based on this description, an SWR of 1:1 means total reflection.
Of course, this is incorrect.

The Standing Wave Ratio (SWR) is the ration of the maximum voltage
(or current) to the minimum voltage (or current) of the standing
waves found on a transmission line.

An SWR of 2:1 indicates a reflected voltage coefficient of 33.3%
and a reflected power of 11.11%.

Not correct. It is the ration of the forward voltage plus the
reflected voltage to the forward voltage minus the reflected voltage.
That is, it is the ratio of the maximum voltage to the minumum
voltage found in the standing waves of the transmission line.

> Current SWR is the same but using
> current. Since the impedance of the forward and reflected signals are
> the same, most SWR meters measure only voltage.

Again, not correct. Most SWR meters sense both current and voltage
to perform a directional measurement. Measuring voltage alone
cannot determine the direction of the signal.

> If the VSWR is 2:1 then the reflected voltage is half the transmitted

Once again, not correct. For a 2:1 SWR, the reflected voltage
would be 0.333 times the forward voltage. Since power is
proportional to the square of the voltage, the reflected power
is 0.333^2 or 0.1111. That is 11.11% reflected power.

While that can be true, it is not the typical case.
Typically, a CB radio transmitter will have a 50 ohm output impedance.
At this impedance, any reflected power is fully absorbed and not
reflected by the radio transmitter.

It is possible, however, to tune for a conjugate match (with an antenna
matcher for example) to provide full re-reflection of any reflected
power.

> Frankly, a high SWR does NOT necessarily mean high loss; for that
> matter, neither does a low SWR indicate you are radiating efficiently.

A low SWR indicates that you are getting a high percentage of your
power transmitted. It is pretty hard to say that this is not
desirable.

> Anyone care to guess what the impedance is for a quarter wave vertical over
> a perfect ground?

Who cares?

> Start at 35 ohms and work DOWN.

There are so many variables, it is not even worth getting into these
details. That 35 ohm figure is for an ideal, infinitely thin
radiating element.

> SWR on a 50 ohm coax
> will be over 1.6. Some folks feed untuned longwires (I did, and it was the

How many CBers use untuned longwires?

So you are PURPOSELY posting misinformation?

The 5% figure is closer to the correct answer of 11% than your
calculation that puts it at 50%.

A 2:1 SWR reflects 11% of the transmitted power.
That's 11% of 4 watts. That makes 440 milliwatts.
I can't believe an additional 0.44 watts of dissipation is going to
damage the output of a Uniden PC68XL.

Also, while currents on the outside of a coax may affect the SWR,
there is no reason for them to affect the accuracy of the SWR reading.
The SWR meter measures the forward and reflected signals inside
the transmission line.

2515. Re: question about RCI 2950 modification

Newsgroup: rec.radio.cb

Listen carefully moron, you don't have to call anybody to get permission
to modify any piece of ham gear. I can modify any piece of my ham gear
any way I want to, but I cannot use it illegally. I have a transmitter
that all I have to do to make it operate the MARS frequencies is install
a crystal, but I cannot operate legally on the MARS frequencies unless I
am a member of MARS. BUT I DON'T HAVE TO BE A MEMBER OF MARS TO MODIFY
THE TRANSMITTER FOR MARS FREQUENCIES. If I open a transceiver up to
transmit outside the ham bands that is perfectly legal, but I cannot use
it outside the ham bands, that is illegal. I can modify an AM rig to
work on SSB or vice versa, I can modify a CW only rig to operate AM, I
can modify a 75 meter only rig to operate on another ham band. I can
make any mod I wish as long as I stay within part 97 rules AND I DON'T
HAVE TO GET PERMISSION FROM ANYONE. My ham license grants me that
permission.

Genocide2RF357 wrote:
>
> Wrong if this is true why is it that u have to call the radio manufaturer to
> get the mods then they ask for a mars cap liscense number to get the mods and
> why does all the amp manufaturers like ameritron alpha and them companys what u
> to have a general class or better license to get 10/12 meter mods to open
> there amps for that.

If I know how to make the mod for MARS frequencies I don't have to call
the manufacture and it is legal.
If I know how to make the mod to an amp to make it operate on 10/12
meters I can do it and I don't need the manufactures' or anyone else's
permission. I can build an amp to operate on 10/12 meters and I don't
need anyone's permission. I can build a transmitter for operation on any
ham band and I don't need anyone's permission. As long as it meets the
FCC specs for operation on the ham bands it is all perfectly legal.

You said it was illegal for ham radios to be modded, please state the
FCC regulation that supports your statement. In case you forget what you
said originally, I quoted you post below.

"ok it is illegal for ham radios to be modded then why in the hell do
almost
ever ham I know have their hf and vhf uhf rigs modded and dont tell me
for
emergencys either it is bull crap who wud be out of band yelling help
any how"

>As usual, and predictably....

you can't produce any proof as many on this news group suspect, because none exists. If there is such an abundance of proof, of me forging posts, you should be drowning in it now. A quick flick of the fingers should be able to produce prodigious amounts of this so-called evidence. So where is it Twisted? I'm not the only one asking lately either. Take a look at the other posts last day or so.

I don't answer your silly questions Twisted because somebody like you with A.I.D.S. (Acknowledged Intelligence Deficit Syndrome) does not have the mental faculties to understand them anyway. It would look stupid if I tried. Can't educate a rock.

The only use your posts have lately is to provide a source of reading entertainment, much like reading the Sunday comic section in the news paper. Funny to read, yes, any serious content, no way. And as a side note your silly verbiage serves as a comic diversion when paper work gets too boring where I'm at for several people. Funny how people pay more attention to you Twisted when you're being stupid. I hope you don't confuse that, attention, with being intelligent, now that would really be stupid.

I believe that you can (at the very least) "fool" any RF amplifier (transmitter) into "believing" that it is properly terminated, regardless of the actual termination, by trimming the length of the transmition line. While this may not actually improve the efficiency of the antenna system, per se, it will allow the transmitter itself to run "cooler" (less apparent reflected power, etc.) and, therefore, more efficiently, as a whole. For instance, with 50% reflected power, you may only be able to run at a 50% output, thereby only radiating 25% of your transmitted power (50% of 50% is 25%). But, if you can "trick" the transmitter into not "seeing" the 50% reflected power, you can "crank-up" to 100% output (even though 50% is actually being reflected back down your transmittion line) AND yourvtransmitter should run cooler as well. You can actually double your power (from 25% of your possible output to 50% of your possible output).
Obviously, this is still not the preffered method, but 3db is 3db!
And, depending upon the situation (emergency, etc.), where may be no alternative. But, I will always say the best system is a FULLY optimized system... From one end to the other!

"Brainbuster" <brainbuster@supanet.com> wrote in message news:9gtg0p$jv1$1@thyme.nntp.netline.net.uk...
Frank Gilliland <sparky@cet.com> incorrectly wrote in message news:3b30c643.1998281@news.cet.com...

| Since Brian doesn't want to explain it....
|
| Voltage Standing Wave Ratio is calculated by dividing the forward
| voltage by the reflected voltage. Current SWR is the same but using
| current. Since the impedance of the forward and reflected signals are
| the same, most SWR meters measure only voltage.
|
| If the VSWR is 2:1 then the reflected voltage is half the transmitted
| voltage. Again, since the impedance is the same for both signals, the
| reflected current is half the transmitted current. Therefore, the
| reflected power is half the forward voltage times half the forward
| current, or, one-fourth the forward power.
|
| 25% loss.

Sorry Frank but, I have to disagree ....

Standing wave ratio is a measure of the STANDING wave - NOT the reflected wave.
The standing wave is a third wave created by the interaction of the forward and reflected signals.

The voltage standing wave ratio you read on a meter is the ratio of
radio and antenna impedance:

VSWR = Zant/Zout (When antenna impedance > radio impedance)
VSWR = Zout/Zant (When radio impedance > antenna impedance)

%REF = ((Zant-Zout)/(Zant+Zout))² x 100
(I hope the 'squared' symbol after the parentesis displays
ok)

eff = 1 - ((SWR-1)/(SWR+1))²
(I hope the 'squared' symbol after the parentesis displays
ok)

Where:
VSWR = voltage STANDING wave ratio
Zant = antenna impedance
Zout = Radio impedance
%REF = Percentage of power reflected
eff = Transmitted power as a fraction of total power in

As the 'battle cry' and motto of this newsgroup seems to be
"prove it", I went to the library for some references:

1. The radio handbook (23rd edition) - William I. Orr (Page 21-6)
SWR = R/Zo.
When R is greater than Zo, SWR = Zo/R

2. Mastering radio frequency circuits - Joseph J. Carr (Page 335)
if ZL > Zo : VSWR = ZL / Zo
if Zo > ZL : VSWR = Zo / ZL

And as this is a CB newsgroup, and to keep 'on topic' :
3. The screwdriver experts guide to peaking out and repairing
CB radios (international edition June 1981) - Lou Franklin. (Page 17)
1.5:1 = 96% efficiant
2:1 = 89% efficient **this is only 11% loss**
3:1 = 75% efficient

4. Read the owners manual for a few radios :
2:1 = 89% efficient = 11% reflected
3:1 = 75% efficient = 25% reflected
Then check the formulae above.

I do like to see technical threads (note the reference to one from some
time back), please keep them coming !!

Hello,
While I can agree with the scientific statement about
loaded antenna's, I will disagree with the actual performance
stats. I did some test a few years back and found a loaded
wrapped antenna to out perform the whip on my truck.
Overall you can't beat the performance and value of
the whip, the only problem is length (hitting tree's, light's
things of that nature).
I got better performance while taking readings with a field strength
meter from the quad wound 6' than from the whip.

Wow I always thought that Bill knows everything about amps.
Case in point Costal Kids DX 667 purchased as new from him,but in fact
was blown up then fixed with "better mods to make it work better"
so he say's. Low and behold with no help from good old Bill,replace the
mismathced finals,bad output transitors,it finally works good.
Gheez a "God" he says,now would a God lower himself being a "Ham"
to doing Illegal mods and
selling amps to make a living as Tech, as said in past post,I pity the
people that would follow
such a person.

Scott, my problem with Firesticks et al is that I cannot see how winding a specialized helical dummy load makes it behave like a 5/8. Can you enlighten me?

Do they also have the standard 5/8 problem of not being able to decouple from the coax?

Your right, they are not for competition. Competition amps are built to run to just short of the "destruction" point. They are kind of like racing dragsters, built for a few runs and then time for an overhaul. The SkyWave300 is built to exacting specifications and to last a lifetime... As for talking skip, don't kid yourself, the SkyWave300 can skip as well as any...

You ask w

"It wasn't hard to find. Check out some of his other posts through some anonymous server, they also end abruptly. Appears there were several instances where he had difficulty in ending his posts. Also, that Oxford spelling and grammar he prouds himself on is manifested in the subject line where he attempted to spell "delirious." And of course his effervescent but false concern for others and the good of the ng is always present in his posts.
He also is completely omnipresent through one.main, ynn, home, anon.,cotse, supernews, etc. from home, work, the gambling parlor, and wherever else he may be and whatever else addy he may be using. This was accomplished by Glen Cambell in Washington state sending him some of that bottled magic that he captures through chants while pretending to gaze at the heavens through a telescope while really spying voyeuristically on his Russian neighbor Vlordik, who is a weightlifter in training for the Olympics. He might even have seen Moses on a Quasar. I want to know what type radio gear he is running. I think we went round and round one time when he was telling me the virtues of his clean, golden audio verses one of my trashy Trams. My Tram is a totally legal radio (at least my cheap meter says it is) and that sucker screams audio all day long."

Your right, they are not for competition. Competition amps are built to run to just short of the "destruction" point. They are kind of like racing dragsters, built for a few runs and then time for an overhaul. The SkyWave300 is built to exacting specifications and to last a lifetime... As for talking skip, don't kid yourself, the SkyWave300 can skip as well as any...

"So what, you a distributor through AOL or what? I have a friend that moved to Kentwood (near Grand Rapids) that is looking for something extremely simple and small, AM only that will work well with his old Bearcat. All he does is daytime DX and nothing else. He doesn't want to spend alot. He won't mess with the mail, but doesn't have a problem spending the gas money on a half days drive or so. He never ran power here, but his Antron just isn't doing it for him up there. I am not familiar with the area or the big roads around there, so I don't know where the stops or shops are. I would like to get him established with a dealer somewhere near him. Treat him right and he'll probably leave someones shop with a new base station as well, as he is curious as to what he is missing on the rest of the channels. He is truly an old time Florida southern cracker, and up there, he is a fish out of water. Speaking of fish, y'all have a supah fine weekend..,,click click click..Gulf of Mexico fishin' vessel, bye bye byebyebye."

2549. Question.....

Newsgroup: rec.radio.cb
Date: 2001-06-22 01:01:06 UTC
From: Dennis <dennis6@attglobal.net>
Message-ID: <3B3298D2.A1A2C8DD@attglobal.net>
Source record: 86489

This post may seem a bit off the general topics of discussion here, but I actually have a question pertaining to CB / HAM radios. I've just recently become aware of the 10 meter band and have been looking at some of the radios advertised on E-Bay. I notice that many of them say that they operate on AM, USB, LSB and a couple of others. I am wondering if any of these bands are compatible with the 40 channel CB band. Also, I'm not sure but I'm assuming that a license is required to operate a 10 meter?

Thanks in advance for advice and/or suggestions to someone just starting to develop an interest in radios.

Dennis......

Hi Frank or is it Doug?
I can never tell which one is playing
on the keyboard. Back to the subject at
hand, Bill and I were going back and forth
for years before that, so that post is nothing
new for anyone that has been here for a while.
About two plus years ago I and he set things
aside and have been on amenable terms ever
since, but if you want, please waste some more
time looking.
Oh another thing, at least most arguments back then
concerned more about technical than personal, something
that either of you can't seem to understand.

You ask w

Hi all,
While this might be damaging to Leland for
posting under an assumed name, this is not
damaging concerning forging. Now don't get
me wrong, if he's forging people then he is as
guilty as the other two, but if not, then all he
is guilty of is using a different name to post,
which in itself is no big deal.
The only real hassle for that is when running
filters, then you can't filter him out as easy.

Yes, the 28.0-29.7 band, called 10 meters, is allocated by international treaty to the Amateur Service. To transmit legally on these frequencies does require an Amateur license and is subject to amateur rules. A good number of these rigs are modifiable to the 26.96-27.41 legal CB as well as frequencies above and below the legal frequencies. I would not recommend illegal operation in general and certainly not illegal operation in the Amateur 10-meter band as we are seeing some renewed FCC enforcement of the 28 MHz barrier. At up to $17K a pop, it is not the brightest move one could make.

Information on Amateur licensing can be found at http://www.arrl.org, sample exams at http://www.qrz.com, and good code practice software (Morse Academy) at http://ah0a.org.

In general, amateur licenses are a combination of one 5wpm code test plus one of three written exams. The first written alone gets one VHF privleges not including 10 meters. Add the code test to it and you will get phone in the 28.3-28.5 range (plus code in the 28.1-28.3 and other ranges) and full privleges in the 10 meter band with the second written. There are FM repeaters in the 29.5-29.7 range, AM in the low 29s and sideband (normally USB) from 28.3 up.

The first written is trivial, the second dedicated to the FCC taking one thru every way to get into the doodoo, the third actually has something electronic on it. Don't let them spook you. You will hear a lot of bullshit on the code thing but most people can do it inside of 30 days if they don't get all emotional about it. The exams can be taken locally thru a Volunteer Examiner program.

As far as the radios, I know from nothing. While there is a lot of freebooting going on, legally anything that can transmit on non-Amateur frequencies requires certification (once called type acceptance) so there is no legal way to be capable on both CB and Amateur freqs with the same hardware. Often, ten meter capability is used as a smoke screen for a cheesy rig that gets modified quickly to illegal CB service so don't believe everything you see. If they are channelized this is almost certainly the case; while some freqs are standard in the VHF bands there are no channels on Amateur freqs.

You will also see CB rigs opened up for capability in the 24.89-24.99 Amateur band as well as some or all of ten meters. In general, these rigs cause more laughter than consternation in the ham bands, particularly when they come with five-tone Roger beeps. Amateur rules do not allow contact with unlicensed people so you may find a QSO comes to an abrubt end. Operating practices are totally different and some of the Old Timers (OTs) and Newbies tend to react to anything that even smacks of CB practice.

Make any sense??

Dick N&#65533;BK

I say the keydowners or the mauldroppers or amplifier gang dudes or whatever you

want to call them are chickenshit to the core.

And here's why.

In all the time (two YEARS now?) that N8WWM has been continually flaming this group (and he has drawn some real threats and flames, you must admit) all the while his name and address are out on QRZ for anyone to find - he has not ONCE had a phone call...or a letter...or ANYONE show up at his door...or approach him

at a hamfest. Ever.

And I have checked this out personally. N8's e-mail is listed at QRZ and you can

ask him about this yourself. Notice that he is still posting from YNN after all

this time.

Which proves that all these threats are just a lot of big talk. The big men are only big when they get behind a CB mike. Or a keyboard. It reminds me of the Wizard Of Oz..."don't look behind the curtain!"

LOL. Big bad men. Big Wimpout if you ask m

From: Sideband <sideband@spam.me.not>
Message-ID: <3B32B5A3.8C686208@spam.me.not>
Source record: 86653

lessee..

The formula for a 1/2 wave antenna is L = 468/F where F is the frequency in Mhz and L is the length of the antenna in feet.

So... 468/27.185 (channel 19) = 17.21 feet

17.21 feet * 12 in/feet = 206.58 inches

206.6 inches for a 1/2 wave antenna...

to get a quarter wave antenna we need to divide both sides of the equation by 2...

1/4 wave = 103.3 inches

Where'd the other 1.3 inches come from? This equation ignores velocity factor.

The velocity factor of stainless steel is roughly .987

103.3 inches * .987 = 101.96 inches

that's pretty close to 102 inches...

So... a 102" whip is 1/4 wave on CB.

Now, if you want to get fancy... you can say that a 102" whip is 5/8 wave... and it is... on another frequency...

468*4=1872*5/8=1170 (constant for the same formula at 5/8 wave)

1170/F = 103.3" = 8.61'
1170=8.61F
F = 135.889 Mhz
So, a 102" whip is 5/8 wave somewhere in the aviation band...

Just my two cents.

To Earthlink Abuse Team,

I am bringing to your attention the following posts (below) from the newsgroup rec.radio.cb.

This post involves the illegal activity, as per Part 2.815 of Title 47 of the US Code of Federal Regulations, of advertising for sale a radio frequency amplifier capable of operation between 24 and 35 Megahertz. This is an offence that is punishable by fines, imprisonment, or both.

Free and open trade of this type of illegal equipment encourages others to do the same, and detracts from the criminal nature of such activities. It also deceives the public to believe that such activity is legal and/or acceptable behavior.

Illegal operation of radio transmitters and amplifiers causes interference to radio and television broadcast stations, and disrupts radio communications for emergency services and other licensed users. This type of "RF thievery" is analogous to an internet hacker that can "steal" an IP address, disrupting the peaceful and legal operation of the internet service provider that has legal right to that IP address.

I am confident that you will take any action that you feel is appropriate.

Thank you.

Sincerely,

XXXX X XXXXXXX

```
: I believe that you can (at the very least) "fool" any RF amplifier
: (transmitter) into "believing" that it is properly terminated,
: regardless of the actual termination, by trimming the length of the
: transmition line. While this may not actually improve the efficiency
: of the antenna system, per se, it will allow the transmitter itself to
: run "cooler" (less apparent reflected power, etc.) and, therefore,
: more efficiently, as a whole. For instance, with 50% reflected power,
: you may only be able to run at a 50% output, thereby only radiating
: 25% of your transmitted power (50% of 50% is 25%). But, if you can

Your belief is at least partly wrong. If 50% of the power is reflected,
you can have anywhere from 50% to 100% of the output power actually
going into the antenna. It depends on the losses in the transmission
line. For a long run of lossy coax, your statement may be close to
true. But then, you would measure a 1:1 SWR at the transmitter. If the
transmission line is open line, which is almost lossless, then almost
100% of the power would get to the antenna.

You started with a half wave formula so you need to divide by two. So he is pretty close to the color burst signal of TV Channel 4. With a bit of trimming it might make a 5/8 for an R/C airplane, probably history's most useless application of a 5/8.

Dennis <dennis6@attglobal.net> wrote:
: This post may seem a bit off the general topics of discussion here, but
: I actually have a question pertaining to CB / HAM radios. I've just
: recently become aware of the 10 meter band and have been looking at some
: of the radios advertised on E-Bay. I notice that many of them say that
: they operate on AM, USB, LSB and a couple of others. I am wondering if
: any of these bands are compatible with the 40 channel CB band. Also,
: I'm not sure but I'm assuming that a license is required to operate a 10
: meter?

AM, USB, LSB, FM, PM, CW are not bands. They are modes of operation. They all can use the same frequencies. In practice, there are agreements about which modes can be used on various of the band segments.

AM is amplitude modulation, USB is upper sideband suppressed carrier, LSB is lower sideband suppressed carrier, FM is frequency modulation, PM is phase modulation (pretty much indistinguishable from FM). These are all modulated modes. CW is continuous wave, where the carrier is not modulated, it is just switched on and off. There are other modes and submodes, but these are the most common.

I don't because I'm leaving for Ohio in the morning. I'm sorry I am going to miss so much the total chaos that's happening in the group right now, but I'll be able to catch up when I get back. It should be fun to see who y'all start blaming for forging posts. Who will it be next week when I'm not here: Voobner? Dick? Elvis? Heck, I'm going to have to come back two days early, one to read all the posts and the other to recover from the laughter. I might even change my ISP when I get back just to confuse you idiots even more -- that is, the idiots that aren't in jail for phone harassment.

BTW, do you remember when I said that I was only going to take your picture? I lied.

2585. Re: What's better? A 102" whip or a 5/8 wave mobile???

Newsgroup: rec.radio.cb
Date: 2001-06-22 08:50:10 UTC
From: Sideband <sideband@spam.me.not>
Message-ID: <3B3306C2.6A053CB5@spam.me.not>
Source record: 86675

Um... let me correct the second part of my little spiel there... I
goofed the math...

468 = 1/2 wave not 1/4 wave

so 468*2 = 936

936*5/8=585

585/F = 103.3' = 8.61'
585 = 8.61F
F= 67.944Mhz

so a 102" whip is 5/8 at about 68 Mhz, give or take... Anyone know what
service uses that freq range?

The KW-7 is actually a 3/4 wave topped with a full wave coil. The only
time I had RF zap is when the ground came loose at the antenna.

2590. Re: FCC Rules, You cannot advertise for Sale amplifiers

Frank at lkilgore@xmission.com responded to a post of mine saying the
following:

>What difference does it make how high a license someone has?

>On or about Sun, 17 Jun 2001 Some idiot wrote the following:

>FYI - I do agree with your original statement - CB amplifiers are
>illegal. They are. Personally, I really don't see why you'd want to
>spend the money. The CB band is full of profanity, inconsiderate
>operators, QRM, people running jerry-rigged crap that can't put out a
>good signal, etc. Get a ham license.

>and On Sun, 17 Jun 2001 16:02:06 -0400, in rec.radio.cb I wrote:

>I have a higher license than you. The HAM bands are full of profanity,
>inconsiderate operators, QRM, and especially people running jerry-
>rigged crap that can't put out a good signal, etc.

>Go bash some amateur radio operators.

I am glad you asked Frank. Because most no codes are idiots. They
haven't the brain power to get the next level of ticket. Most self
appointed frequency police are no codes. They are mostly ignored
by real amateur operators. I would be embarrassed to be a Tech No Code.
But you are going to say that everyone was a Tech No Code at one time.
Incorrect. When I tested, I started with no license at all and after the
tests,
I walked out a General with 20 wpm. Didn't even take the 13 wpm. Took
about an hour and a half and I really didn't study too hard.

So to the self appointed frequency police I say fuck you. To the
AntiKeyClowns
I say fuck you too.

Buckeye...

From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3B3335D2.52BC186@qnet.com>
Source record: 86689

Hello Randy: This is a excellent post.

I need the European Countries CB Frequencies, I am printing this out.

Thanks for the great info here.

Jay in the Great Mojave Desert, ... just down the road ah ways from
the fillin station.

Miss Dinah over at the fillin station has mining tools and Whites Metal
Detectors at a very good price, but its a little bit warm for mining in
the Mojave now, but there's some who do.

2596. Re: SWR and coax

Newsgroup: rec.radio.cb
Date: 2001-06-22 12:11:22 UTC
From: Brainbuster <brainbuster@supanet.com>
Message-ID: <9h0226$n7d$2@thyme.nntp.netline.net.uk>
Source record: 86750

Bill Nelson <billn@spock.peak.org> very correctly wrote in message
news:9gs4k4qbj1@bashir.peak.org...
| It depends on where you measure the SWR - and how much coax loss for
| a perfectly matched system exists.
|
| If the coax loss is low, as is usually the case for systems we put
| together, then Brian is much closer to being correct than you are.
|
| Bill Nelson (billn@peak.org)

I have seen cases where the measured SWR is affected by the point
at which it is read. This position problem caused some people to
incorrectly believe that you could lower the SWR by adjusting the
coax length (if only it was that easy).

In one case, a customer was compaining of a very short range on their
home base station. Their apparent SWR reading was around 1.3:1, as
read on a meter at the back of the radio.
When plugged in the same position, my meter agreed with this reading.
So I took the reading at the base of the antenna ..... in the red !!!
Once this was adjusted, their signal was brilliant.

Using good low loss coax, in a length that is a multiple of half wavelengths
can help, but how many people know the velocity factor of their coax, how
many CBers want to get that involved , and what about loss ?
The coax loss for the reflected signal at the radio end is double the cable
loss, as it is attenuated in both directions.

BTW in the UK it is 'against the rules' to leave the SWR meter permanently
in line. We also have a limit on antenna size, width, and type.

UK CB LEGAL CHANGES .

LICENCE :
Still required. Dealt with by SSL (subscription services limited), who
are a part of the Post office.
http://www.radiolicencecentre.co.uk/rlc/

FREQUENCIES:
Now only TWO bands:
26.965 - 27.405 MHz FM (see equipment section, below)
27.60125 - 27.99125 MHz FM (see equipment section, below)

*** The UHF band has now been totally withdrawn. It is now illegal
to use the old 934MHz equipment.

EQUIPMENT:
changes as follows:

*** The two existing bands may be combined in one radio.
It is still illegal to modify any single band radio equipment.

*** Changes were made to the equipment spec. The spec change
was to improve the rx and tx standards. frequency and power
remains the same. Old equipment may still be used, but not
sold as new in the shops. The latest marings are:
PR27/94 (replaced 27/81)
PR27 or ETS 300-135 (european band)

note:
1. Part of this new spec actually protected the consumer !!
Many radios for the UK market had very poor RX filtering. Some
radios had such poor rx filtering that you would receive 'bleedover'
from several miles away and from all channels. I kid you not,

you could hear conversations from all 40 channels on every channel.
The new spec included a minimum adjacent channel rejection figure,
and so stopped manufacturers from producing such bin-fodder

ANTENNAE:
The antennae rules have changed:

MAX LENGTH:
1/2 wave dipole
5/8 wave vertical

MAX WIDTH :
I believe this is 55mm.

TYPE:
This remains unchanged - omnidirectional, single element. No beams allowed.

SWR METER:
It has also been stated that an SWR meter should only be in line while
installing or testing the antenna.

Details have also been sent to the FAQ e-m addy given on the original message.

2603. Re: International CB (long)

Newsgroup: rec.radio.cb
Date: 2001-06-22 14:50:41 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3B335B41.E7D69D7A@qnet.com>
Source record: 86695

Hello Train: Yes thats right!

I get a big kick out of the time the anti good balls put into this thing, I think its quit amusing. I work two jobs and being a single parent, doesn't leave me much time for the ng anymore.

One thing I have noticed is that I get way more e-mail than normal, with antenna questions. I think I'll half to have a antenna trouble shooting section put in the web site. Again the antennas are easy to build, but tuning runs most up the flag pole with the vision to run the antennas over with a truck. I saw this once and wished I had my camera, damn!

I'll have "Things that didn't work" section that make the first time antenna builders get smoothed over a little. I have quit a pile of stuff that didn't work. The keyboard with axe thru it is a classic.

The other goof balls in the desert, some make it but most don't. When I was about ten years old or so, my Uncle took me out and we dug in a open pit gold mine, and filled his pick up truck with that we believed to be high grade gold ore type dirt. It cost $125.oo to process the dirt, to get $50.oo dollars with of gold, not a real money maker.

I have hiked all over the desert, and saw many things. I have worked with the US Army to show them exact locations of the US Geological Several location points. No big deal all you had to do was look for them using the US Maps. And a hand held GPS receiver.

I have found Wildcat (custom made) expent rifle cartridges in the desert, just below a window in a American made rock house, (Chinese made rock houses where better made) especially made to not be seen, in a canyon at the top of a little valley. A position that one could easily pin down a posy with a rifle and a near by spring for unlimited water. These parts is where bandits and wanted men hide from the law a 100 years plus ago. A lot of fun to look around and watch all the X type aircraft from Edward's AFB.

What I really get a kick out of is the anti's lack of logic in perusing there goals. If there was ever a example of nut cake logic this is it, coupled with all there time lost ect. Simple amazing, but also sad as it shows something wrong with their lives, a real pity.

Out of time again......

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

2604. 4 Sale Hy-Gain 4 element Quad

Newsgroup: rec.radio.cb
Date: 2001-06-22 15:21:28 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3B336278.50E63EC5@qnet.com>
Source record: 86753

Hello All: Yes this is the Hy-Gain Big Gun II 4 element beam antenna.

The guy who wanted this antenna rebuilt had to back out for his kids medical bills.

Totally rebuilt and checked out, and tuned dead nuts for 27.205 MHz, with all new fiberglass element support rods, all new stainless steel hardware, and added bullet proof support brackets.

New bullet proof insulated 12 gage wire, for long time lasting in the sun.

Also the original assembly instructions from Hy-gain, and a set of red lined improvements on the assembly instructions, that have been done.

I think Hy-Gain rated this at 4 element quad beam antenna at 14 dB gain with no reference to what the dB rating is referenced to. Probably close to 10 dBd gain.

The first $450.00 dollars American, plus shipping takes it.

Jay in the Mojave

2607. Re: What's better? A 102" whip or a 5/8 wave mobile???

Newsgroup: rec.radio.cb
Date: 2001-06-22 16:30:34 UTC
From: "Leland C. Scott" <no-spam@junk-mail.net>
Message-ID: <tj6svgdldrg971@corp.supernews.com>
Source record: 86692

How extensive where your tests? Loaded antennas have a some what different radiation pattern compared to a regular whip. Notably the current distribution is different. Second you have to be sure to measure the field strength well outside of the antenna's near field. It's only the far field which contributes to the radiation.

There was a very interesting article in QEX where a lot of simulations were done comparing loaded whip antennas. The interesting conclusion is the location of the loading coil also make a big difference in performance, read efficiency here.

Doing antenna measurements at H.F. frequencies can lead to errors due to "ground gain" too. There may also have been some other factors that may account for your results. So it may not be so cut-and-dry without examining the whole test setup and procedures.

> damage the output of a Uniden PC68XL.

It's a very common miss perception that the reflected power is "absorbed" by the transmitter's output stage, it's not. What happens is the reflected energy combines with the forward energy which has the net effect of altering the feed point impedance of the coax, i.e. the load the transmitter sees. The output stage in any transmitter is designed to deliver full power only over a small range of impedance values. Impedance values outside of that range results in the output device either running higher than normal current or voltage, depending on if load is much below or above 50 ohms. The higher voltage or current results in higher power dissipation in the power device, which of course results in a higher operating temperature. In fact for cases resulting in higher than normal voltages I have seen Zener diodes connect between the collector and ground side of the circuit, in a common emitter configuation, to clamp the voltage to a safe value below that which will blow the device.

> Also, while currents on the outside of a coax may affect the SWR,
> there is no reason for them to affect the accuracy of the SWR reading.
> The SWR meter measures the forward and reflected signals inside
> the transmission line.

First of all you need to understand how a "typical" SWR meter works to understand how the error occurs. First of all a SWR meter can not measure the forward and reflected voltage, or current, wave directly because the voltage and current at any given point is the vector sum of the waves traveling in each direction at any point along the transmission line. To figure out which is which measurements must be done on at least two different points along the transmission line. Most, if not all, SWR meters employ a circuit which senses the voltage at two different places along the line, and the current at one point. If you open one up and look you will see the voltage sense points etc. The current is sensed simply by a small toroid wrapped with wire and terminated in a low value "burden resistor"., which makes what is called a "current transformer". The voltage appearing across the burden resistor is proportional to the current being measured. This current transformer will measure the current on the line, but it has no way of telling the different between the current flowing on the inside of the coax shield from that flowing on the outside.

Using a little bit of math it can be shown how the forward and reflected voltage waves can be found based on just those three measurements above using a simple analog circuit once the distance between the two voltage points is known, and the current transformer scaling factor. However the ASSUMPTION made is the current on the inner and outer conductors are equal. In the presence of "antenna" currents that assumption is invalid, thus the SWR reading derived from those measurements is also invalid.

Various methods have been used to eliminate antenna currents. A coil of coax at the base of the antenna acts as a large inductance for the currents tending to flow on the outside reducing them. The current on the inside of the coax shield is balanced by the current on the center conductor so the coil has no effect on it. The next method involves winding several turns of the coax around a ferrite toroid, or slipping several over the coax, and works the same as the last idea. The last common method takes advantage of the fact that a shorted 1/4 wavelength of transmission like looks like an open circuit to RF energy at the open circuited end. A pipe, or conductive braid, a 1/4 wavelength long is slipped over the transmission line at the base of the antenna. At the end opposite from the antenna the braid is shorted to the coax shield.

Typical WhiteTRASH forge, Douglas. Can't hide the Traceroute.
BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAAAAAAAAAAAA!!!!!!

Isn't your boyfriend Gilligan stopping by to sexually appease your fatass???
When he gets there, tell him there was no Frank Gilliland (USMC Ret.) in the
24th MAU. Your faggot assed Gilligan from Washington (was it Mammoth Lakes?) is
flaming freaking assed liar.

How's your internet connection today? Have you approached your local big strap
yet to confront him about his excessive use of power on CBRS, lately? Didn't
think so. How's your SWR?

It's not damaging at all. There's no header for one. And I do remember this being posted before, however the header could not be traced to me. In fact it looked like it belonged to another well known personality on this news group posting under various names. There were several others on this news group who pointed that out to Twisted at the time too. Further the other party claimed responsibility for posting it, and why the section appears as it does. As a side note, damaging Twisted's poor ego, my sig files are not automatically added to my outgoing posts or even E-mail at anytime. I use outlook express for both work and personal use so I can't have the automatic sig file inclusion on anyway. As you may have noticed I use a number of sig files which I have to manually select through several menu selections using outlook express. So Twisted's argument I erased my sig file before posting the section noted above just does not make any logical sense. It would have required far to many steps to occur by pure accident.

There are also a couple of other things about my posts which he has failed to pick up on, as well as most everyone else here. Just look at the domain

where my posts come from within the time frame 8am to 5pm M-F EDT, and where they come from outside of that. I can't post from two different domains during the above time period because I do it from my work QTH, and I have to use their proxy server and Internet service provider to do it. Any posts that don't come from that domain during that time frame can't be mine. So old Twisted is holding up posts from several different domains, claiming I did it, and never noticed his silly mistake. I can't tell you how many times I have sat here chuckling over his ignorance. I have long since given up explaining anything to him. It's like trying to have an intelligent conversation with a rock.

Well that neatly sums up your contribution doesn't it Twisted? You're just plain jealous because you don't have any technical back ground to help this guy and I do. Not only that I bet you don't even understand ten percent of it either. I have serviced and designed power electronic equipment for over 21 years, and I have the college education to go with that and you don't have squat. The circuit equations that work for one area of electronics work exactly the same for any other. This is one of those times Twisted where it's in your own best self interest to keep your mouth shut so you don't end up looking like a total ignorant fool. As a matter of fact Twisted I don't ever recall you providing any technical help to anybody on this news group at anytime. The only contribution you ever seem to make is shooting off your smart mouth. Get lost. You haven't contributed anything of value to this thread.

> It's a very common miss perception that the reflected power is "absorbed" by
> the transmitter's output stage, it's not.

This is incorrect. It is no misperception. For a radio with a 50 ohm output impedance connected to a transmission line with a characteristic impedance of 50 ohms (typical CB installation), all reflected power is absorbed by the transmitter's output stage.

At 50 ohms, there is no re-reflection. The power is absorbed. You can do the math yourself (although it is intuitive). Zero power is reflected with a 50 ohm termination -- this is true regardless of which direction a signal is traveling on the transmission line.

> What happens is the reflected
> energy combines with the forward energy which has the net effect of altering
> the feed point impedance of the coax, i.e. the load the transmitter sees.

Reflected power does indeed alter the feed point impedance of the coax. Instead of seeing the desired 50 ohms at the input, the transmitter will see some other impedance. And what happens when a transmitter sees mismatch? Answer: power is reflected back into the transmitter.

It is possible to re-reflect reflected power by providing a conjugate match. This can be done with an antenna tuner. But without some mechanism for providing this conjugate match, all reflected power does indeed flow back into the transmitter where it is dissipated.

> The output stage in any transmitter is designed to deliver full power only

> blow the device.

In essence, an impedance mismatch and reflected power are synonymous. You blame one and disavow the other. These higher voltages and currents ARE because of reflected power and they ARE because of an impedance mismatch. It's the same thing.

Consider this: If reflected power did somehow get back into the
transmitter (as you claim does not happen), what would be the effect?
The answer is higher voltages and/or currents -- exactly what you
admit does happen.

> traveling in each direction at any point along the transmission line. To
> figure out which is which measurements must be done on at least two
> different points along the transmission line.

Not true. Here's how it works:
An SWR meter is designed for a specific characteristic impedance -- 50
ohms typically. Therefore, the ratio of forward current, If, to forward
voltage, Vf, is known. Vf = If * 50. Similarly, the ratio of the
reflected voltage and current is known, but there is a difference --
the reflected current travels in the opposite direction for a given
voltage. Therefore, Vr = Ir * -50.

What the SWR meter does is simultaneously measures voltage and
current and sums the two. It reads: V + (50 * I)

But V is the sum of the forward voltage and reflected voltage:
V = Vf + Vr

Similarly, I is the sum of forward current and reflected current:
I = If + Ir

Substituting into the meter equation, you get:
Vf + Vr + (50 * (If + Ir))

Since If = Vf/50, and Ir = Vr/-50, we can substitute and get:
Vf + Vr + (50 * (Vf/50 + Vr/-50))
= Vf + Vr + Vf - Vr
= 2Vf

What you get is a meter reading that shows only forward voltage.
It is a directional reading. This reading is independent of
reflected power; the reflected voltage and current cancel out.
Turn the meter around and you can read the reflected voltage.
With the two readings, you can determine the SWR.

With one meter at one point in the line, you can correctly
measure the SWR.

> Most, if not all, SWR meters

> the burden resistor is proportional to the current being measured. This
> current transformer will measure the current on the line, but it has no way
> of telling the different between the current flowing on the inside of the
> coax shield from that flowing on the outside.

The toroid simultaneously samples the voltage and current as I
described. It samples voltage through capacitive coupling and
it samples current through inductive coupling. The sum of the
samples is detected (rectified) and fed to a meter.

The meter does not measure current flowing on the outside of the coax.
If the signal does not pass through the capacitive/inductive coupler
(toroid, in your case), it is not detected.

> Using a little bit of math it can be shown how the forward and reflected

> ASSUMPTION made is the current on the inner and outer conductors are equal.
> In the presence of "antenna" currents that assumption is invalid, thus the
> SWR reading derived from those measurements is also invalid.

I showed how it is done without these assumptions. The measurement is
valid even in the presence of common mode currents on the outside of
the coax.

If there were two voltage points at a specific distance, the meter
would only operate at a narrow range of frequencies. Many of these
common SWR meters operate from 2 to 150 MHz. A two-point distance
requirement would make this large operating range impossible.

> Various methods have been used to eliminate antenna currents. A coil of coax
> at the base of the antenna acts as a large inductance for the currents
> tending to flow on the outside reducing them.

Yeah, but at the base of the antenna, you are still in the near fields
where currents can be induced on the other side of the coil.

> The current on the inside of
> the coax shield is balanced by the current on the center conductor so the

> shorted to the coax shield.

This is probably correct but you have to agree that your open will only
be as good as your short and I wonder how good of a short this will
provide. On the other hand, if you use 1/2 wavelength of braid, you
can leave it open at the other end. Getting a good open is easier
than getting a good short.

Picked up an old Midland model 13-795 at a garage sale a while back (about 4 lbs. and the size of a brick). Has a date code of April of 1973 and uses 12 'AA' batteries.
It has jacks for 'Ext.Pwr' and 'Chg'. I was wondering can I charge Ni-cads in the unit with this 'Chg' jack? Don't think they had Ni-cads back then so I'm curious as to what this jack was for.
I'm a scanner scanner so I don't know that much about old cb's. Any help would be appreciated. Thanks.

Jay, Take a good look at pinhead and the "Keyclowns" who reply to the Anti's post and who provide there own posts. They also have alot of time on there hands. Don't single out one side when both are doing it frequently. I guess you guys have never thought there is more than just Frank and Doug if there are even people with these names. But to sit here and watch the group accuse 2 or 3 people is just plain old stupid.
.

Twistie, Is Leland Talking to you?
I don't think he is so why don't you put it wide to the side and take a stand by or your
gums still a flappin. And you guys want to blame doug, or frank or who ever for posting bullshit posts when again You do the exact same thing but worse. Nothing cb or help related just a sarcastic post. Talk about get a life! Since you don't understand anything about legal electronics or otherwise you attempt to discredit him.LOSER!

Sparky, I agree it is just like the cb radio. Do you know how many times I was supposed to get my ass kicked on the CB after 20 years. Many,many times, but no one has ever showed up. Not 1 time in all those years, I have given directions, stood out in well light parking lots But 0 times has a Keyclown ever show up. Don't feel bad it isn't just you.

> This is incorrect. It is no misperception.

There is simply because there is nothing in the specifications that states the impedance of the OUTPUT section is 50 ohms. Look very carefully at any manual and tell me where it states the "internal impedance" is 50 ohms. All that is specified is the amplifier or transmitter output should be connected to a 50 ohm load, period. Second there is no conjugate match between the output and the coax. This applies only if one wants to extract the maximum power. In all most all cases you can't extract maximum power without exceeding device ratings. There are several very technical articles written covering the last point. The most recent of which appears in the book "Reflections II" by M. Walter Maxwell.

> In essence, an impedance mismatch and reflected power are synonymous.
> You blame one and disavow the other. These higher voltages and currents
> ARE because of reflected power and they ARE because of an impedance
> mismatch. It's the same thing.

Yes, however it is the power device operating in to a mismatch with the resulting higher operating voltages or currents causing the heating. The output device does not absorb the reflected power causing heating, it is the operation outside of the designed range of device voltage and current that is the source of the heating. The energy reflected back to the output is rereflected back to the antenna. I have seen rigs that have only a 50 watt output show 75 watts of forward power with 25 watts of reverse power for example. The output of the rig does not automatically start producing more power by magic. The 25 watts of reverse power once it reflects of the rigs output now becomes part of the "total" forward power. Again these points are covered in the original book "Reflections" which I think you can down load from the ARRL web site. The math and vector diagrams are all there explaining the process.

> It is a directional reading. This reading is independent of
> reflected power; the reflected voltage and current cancel out.
> Turn the meter around and you can read the reflected voltage.
> With the two readings, you can determine the SWR.

The problem with your analysis is you assumed the current on the line is "balanced". When you have antenna currents that is no longer true, the reflected current has an additional component not accounted for in your calculations, the antenna current. You never had the experience where the SWR reading was way to high, and simply adding a ferrite toroid on the coax suddenly made the SWR drop? I have seen it happen myself with the built in SWR bridge on commercial radios, and SWR meters. The only change was the addition of the ferrite. Ask around I'm sure there are people out there who will tell you that they know from experience that antenna currents screw up SWR readings.

> The meter does not measure current flowing on the outside of the coax.
> If the signal does not pass through the capacitive/inductive coupler
> (toroid, in your case), it is not detected.

In the case of a toroid yes. The inductive coupler and the inside conductor bring to mind another source for error in the current measurement. The only source of current in the system is the transmitter/amplifier. If there is current flowing on the outside of the coax the extra current had to have been sourced by the transmitter/amplifier by the inner conductor. The total current on the inner conductor matches that on the shield, inside and outside, but the inside shield current does not match the inner conductor current. Remember all of the calculations assume the two currents are equal, inner conductor and the inside shield current. If they're not all bets are off.

> > Various methods have been used to eliminate antenna currents. A coil of coax

> Yeah, but at the base of the antenna, you are still in the near fields
> where currents can be induced on the other side of the coil.

I didn't say the solution was perfect, in fact none of them are. The other pit fall is if you're unlucky enough where the capacitance between turns resonates with the inductance of the coiled cable at the operating frequency.

However 1/4 wavelenght takes only half as much cable lenght and braid to do it too. At HF frequencies that can be a good long section of cable. 8->>

You get maximum energy transfer when the load impedance equals the output impedance of the driver, in this case, the amplifier. If the output impedance is 50 ohms, as indicated in the specs of my transmitter, then the maximum energy delivered to the load is when it is 50 ohms also.

>
>The problem with your analysis is you assumed the current on the line is "balanced". When you have antenna currents that is no longer true, the reflected current has an additional component not accounted for in your calculations, the antenna current. You never had the experience where the SWR reading was way to high, and simply adding a ferrite toroid on the coax suddenly made the SWR drop? I have seen it happen myself with the built in SWR bridge on commercial radios, and SWR meters. The only change was the addition of the ferrite. Ask around I'm sure there are people out there who will tell you that they know from experience that antenna currents screw up SWR readings.
>
>> The meter does not measure current flowing on the outside of the coax.

>> If the signal does not pass through the capacitive/inductive coupler
>> (toroid, in your case), it is not detected.
>
>In the case of a toroid yes. The inductive coupler and the inside conductor bring to mind another source for error in the current measurement. The only source of current in the system is the transmitter/amplifier. If there is current flowing on the outside of the coax the extra current had to have been sourced by the transmitter/amplifier by the inner conductor. The total current on the inner conductor matches that on the shield, inside and outside, but the inside shield current does not match the inner conductor current. Remember all of the calculations assume the two currents are equal, inner conductor and the inside shield current. If they're not all bets are off.
>
>
>> > Various methods have been used to eliminate antenna currents. A coil of coax
>> > at the base of the antenna acts as a large inductance for the currents
>> > tending to flow on the outside reducing them.
>>
>> Yeah, but at the base of the antenna, you are still in the near fields
>> where currents can be induced on the other side of the coil.
>
>I didn't say the solution was perfect, in fact none of them are. The other pit fall is if you're unlucky enough where the capacitance between turns resonates with the inductance of the coiled cable at the operating frequency.
>
>>
>> > The current on the inside of

Encouraging phone harassment? Not too smart, Mopar. At least Pinhead/Curious Dan

did it from a fake account he can cancel when the trouble starts.

Sure. The rest of the story is that Scott went to Yahoo and told them "I want to

start a newsgroup where people who break federal laws by using amplifiers on CB
won't get criticized".....and they laughed in his face.

A 'spot' switch is used to activate a small signal from the selected TX position. This signal can then be tuned in 'spotted' on the receiver. A nice feature if you don't have the tx channel numbers labeled on the radio.

A friend gave me this thing yesterday knowing I was into radios. I just thought it was cool because it is called Stoner! It's a 40 ch base radio it from what my locals tell me it talks really good!!!!!!! I'm kinda Jonezin for more smoke so I need to find out what this thing is worth so I can sell it and get stoned on my Stoner!

> You get maximum energy transfer when the load impedance equals the
> output impedance of the driver, in this case, the amplifier.

You are not looking for "maximum energy transfer" if you are referring to a power amplifier or output stage of a transmitter. Trying to extract maximum power can damage the power devices in the equipment. The same principle that you used in your example, "maximum energy transfer ", applies to all electrical circuits so I will apply it to another one. The common counter example is the plain old 120 VAC wall outlet. What must the output impedance be to extract "maximum energy transfer" given that you have the whole output of the power plant to draw on? Does it make sense to do this? No because something will fail long before you reach "maximum energy transfer". 8-)) Amplifiers, transmitter output stages etc. all have the same limitation. They must supply a given amount of power WITH IN THE RATING of the devices used. The output networks are designed to transform the normal 50 impedance of the coax to an impedance level which the power device(s) can supply power to without exceeding the rated voltage, current, and power dissipation ratings of the output device(s). Note we are not talking about maximum energy transfer, but getting the maximum energy while not exceeding device operating parameters. They are not the same thing.

> If the
> output impedance is 50 ohms, as indicated in the specs of my
> transmitter, then the maximum energy delivered to the load is when it
> is 50 ohms also.

Consider if the source impedance of the transmitter is 50 ohms resistive and the load impedance is also 50 ohms resistive that implies that 50 percent of the input power is wasted in the transmitter and the other 50 percent is passed to the load. Since we both know that transmitter efficiencies often significantly exceeds 50 percent the output impedance of the transmitter can not be 50 ohms "resistive". QED.

So if the output is not 50 ohms "resistive" than what is it? The 50 ohms output impedance is in fact called a "nondissipative" resistance. And as that term implies the output "behaves" as if it was 50 ohms, but in reality it is not a "real" resistance as you commonly expect. That is also another reason why the reflected power on a transmission line is not absorbed by the output, there is no internal 50 ohms of real "dissipative resistance", but is instead is reflected back towards the load.

For a more in-depth explanation see if you can get a hold of a copy of the May/June 2001 issue of QEX. The article by Walter Maxwell, "On the Nature of the Source of Power in Class-B and -C Amplifiers", does a good job outlining the details. If you can't I would be happy to mail you a copy, let me know by the E-mail address listed under my callsign on QRZ. He uses some VERY precise word definitions in the above article, some of those words I used above, so you need to read carfully. There is very little math, and what there is of it, high school level at most, should be understandable by just about anyone.

It's a kickass SSB Base radio made on Mercer Island, Washington. They are probably the best designed SSB rig out there. Talk to Kermit as he has the manual for it if you didn't get it with that radio.

news:3B327B62.891A057C@hotmail.com...
> Have you worked out the numbers for a 1/4 wave whip?

What numbers would that be? I was screwing around doing some calculations on the skin effect resistance of a SS whip. So far it looks like the skin resistance amounts to only a few ohms which implies the radiation efficiency is very high, like over 90 to 95 percent. I haven't had a chance to double check the calculation method yet so the numbers can be off, but I don't expect to see a big difference if there is an error. What does look interesting is the antenna efficiency seems to go up as the frequency increases as long as the radiation resistance does not change.

> How about a Firestik KW-7?

If that is a helical coil type of antenna that could be a real pain to simulate. I tried a 70cm helical antenna with 16 turns and I was already pushing the limits on the software with close to 500 wires, EZNEC software limit, which includes the ground plane. Somebody who has a NEC4 package could do the simulation, or try using one of the older NEC cores with a higher wire number limit may also work.

You can find the documentation here, but I hope you know your vector calculus real good if you want to understand what makes these antenna simulation programs tick.

http://www-mo.enst-bretagne.fr/documentation/nec2/

The different simulation cores can be found here. You don't really need to understand all the math to use the software. You do need to read the user guide to understand how to format the data the software reads.

http://www.qsl.net/wb6tpu/swindex.html

Experimenting with antennas is one of the interesting things a CBer can do legally and learn a lot in the process too. The same goes of course for Hams. I know I have learned a few things in the process. This is one of the few areas where both groups can find a common interest.

Well which number is it the 508 or the 425 ?
You guys were pretty confident of the first number. Hope for all who bought those phone cards for the first number go buy some more, and then next week buy for some other number. All you have to do is get on the CB radio and ask for the number.

| BRITISH CITIZENS' BAND CONFEDERATION
| [Please note that these frequencies are illegal to use in the United Kingdom
|
| http://www.radiolicencecentre.co.uk/rlc/
|
| Nice try fellas....

ILLEGAL IN UK ?????!!
At first I wondered what gave you this idea, but then I looked at the web page http://www.bcbc.cwc.net/Extras/freq_chart.htm (from a link at the above web site) . If you look at this a bit closer, you will notice the columns - the frequency bands I stated are in the 'LEGAL UK CHANNELS' column.
I can see how their page layout may have caused confusion - maybe they should be told about this.

CB IN UK
CB became legal here in 1981. We were offered 934Mhz, but argued for, and got 27MHz (27.60125 - 27.99125). Later we were given the CEPT frequencies (26.965 - 27.405 MHz FM). 934 MHz was withdrawn some time back, and recently Dual band (27MHz) CBs were allowed .

NICE TRY FELLAS ????
I may be wrong here, but you seem to suggest that I am not who I say I am, but one (although the plural is used) of the usual crew.

As many people on this group seem to avoid direct answers, forge posts, etc - I will make this clear :
The e-mail address at the bottom of my messages is correct..
The name at the bottom (Peter) is correct.
I am in the UK (central england)..
I have never posted a news message under any other name.
I have never forged a post, or tampered with the header.

If you have any doubt about the e-m addy below, then try it - send me an e-mail. Please keep any e-mails free of foul language.

BTW the copy I sent to the e-m address on the FAQ bounced. Anyone know what the new e-m address is ?

If I have misunderstood any of the quoted post, or my server has missed a message between, please accept my sincere apologies.
It is never my intention to offend anyone on this, or any newsgroup.
I usually download newsgroup messages once a day, so I often do not see any replies until the following day.

Sir, many miscreants in this NG use the UK as an excuse to proliferate modifications to CBs used in the USA and to sell illegal amplifiers. Are amplifiers legal in the UK on CB? I think NOT. What is the max power level permitted?

>>I say the keydowners or the mauldroppers or
>>amplifier gang dudes or whatever you

>NO. THEY ARE RESPECTABLE HAMS AND TECHNICIANS. GANGS RATHER HANG
>OUT AND RELAX.

"respectable"? Since when is it "respectable" to break the law?

>HOW COME THESE "keydowners or the mauldroppers or amplifier gang dudes"
>ARE STILL AROUND?

Same reason why criminals ae still around. Stupid, I guess.

>HOW COME YOUR AKC MOVEMENT

Oh, now you admit it's a "movement"? Before you thought it was the work of all one person. In any event, you sound worried and petulant about it. Good!

>HASN'T DONE A DAMNED THING TO CB'ers???
>HUH? HOW COME?

It got rid of a lot of the hardcore illegal gang. Toll Free, Dennis O., etc. It got rid of illegal dealers ads (EEI, Coax Kid, DaveMade, NoName, etc). Seems like it made some major changes you won't admit to.

>BECAUSE THERE IS ABOUT A BILLION TIMES MORE CB'ers (WHICH
>INCLUDES HAMS) THAN THERE IS HARDCORE HAMS (Tech's at that)
>AND THERE IS NO WAY TO STOP IT.

You seem proud of being dishonest and getting away with it. Do a billion illegal

CBers make illegal CB OK?

>"For every man killed, another man will take his place and fight!"

If you look at the history of this NG, that statement seems to apply more fittingly to the folks who oppose you.

>DOUGLAS WAS INSIGNIFICANT AND STILL IS LIKE YOU AND
>LELAND. WHY SHOULD ANYONE APPROACH AN IDIOT WHEN THE
>BASTARD WOULD LITERALLY FOLD IN FRONT OF YOU?

That's a weak excuse for talking big and then backing away.

>LET ALONE TALKING TO THE FAGGOT. HELL, I Instant Messaged
>HIM ON AOL AND HIS FOUL-MOUTHED SELF JUST SLAMMED RIGHT BACK.

I suppose your IM was a friendly one?

>WHAT WAS THAT THING I READ ABOUT THAT KID UP IN THE NEW ENGLAND AREA

> I was considering one for use
>on 10 mtrs. Does this radio have down falls and what are
>they...........

I'm not the seller, but I do own several of these radios.

Some chirp on CW unless power supply is excellent and all connections are flawless. Some drift and frequency error on SSB with temperature changes.

On the other hand, the 2950 has a very HOT receiver. Over-all, it is an excellent radio. Modulation, especially with the stock mike, is crisp and clean. You may need an optional tone board for some 10 meter repeaters.

QRM

Hello Proziac: You look up the posts, who counts these things anyway.
I don't have the time or background to to all this. I have good computer
secience type friends that could do this, but they get paid for their
time and effort. Not like some of them here.

Second, again who believes anything you say?

Perfect match to what? You didnt even call it to find out if it was who you
think it is - because you are too scared. What a little baby.

What's the problem? Your scary skeleton costume not scaring anybody? Why not try

more hilarious threats and lame warnings? How about saying you'll "find us" and post our phone number. That one turned out to be REAL pathetic because (a) the numbers were for the wrong people, and (b) none of you lame-asses dared call them.

You illegal CB tough guys turned out to be a real disappointment. You forgot this is not CB radio, this is Usenet. You (1) can't key over people, and (2) your threats and your obscenities are deleted - and totally ignored.

All you are left with is illiterate bragging about how big and bad your illegal CB radio is. Not much satisfaction, huh?

Don't worry about it....I'm selling a bunch of stuff...I got a couple
of tube amps here specifially made for 11 meters....filters so they
only run on the 40 cb channels and splooge RF all over the
spectrum...Harmonics Hell ya!!!Got my Antron bleedstick up, pumpin out
1500 watts on 27.195 mhz...Off 220 house current, with a electric
motor in line, to make it really messy...The radio is some no-name
tiwanese piece of junk, dead keying, the spanish channel...Hey, my
transmissions are only meant to be recived by mexicans in mexico, so,
no harm, right? Also, I am selling crack cocaine, and that new exmacy
drug too...I'm also selling kiddie porn, and some handguns to
convicted felons...Whatelse..I have a pirate fm radio station on our
public broadcasting channel, and I'm buying liquor and ciggarettes to
the 8 year old next door...I want to kill some politicians, blow up
the police station, and I also steal mail(fedral offense) I am the
pimp for the prostitute next door, and I also like to stick my 102"
whip up my ass. Did I mention I smoke crack, and eat paint chips...Oh
yeah, Im selling my 1500 watt base linears (x4) for 11 meter usage in
the united states only, for fifty american dollars...

Hey KEYCLOWNS!
now you can report me the the fcc, FDA, ATF, CIA, and FBI
Secret service too

oh yeah, did you ever hear of something called sarcasm?
you guys must be really bored, and have no life, to get off on
reporting these guys, to where ever you do....
Here is an idea for you do-gooders...Why dont you take matters into
your own hands? Go pin some illegals coax..go confront them...Steal
their rig...point the fcc to their house...Just get off your lazy
pussie ass..
Wait a minute, you guys have no balls, and hide behind your anonimity,
on the internet, in the newsgroup with not even your real e-mail

addresses...you guys are prettytough never confronting anyone face-to-face...Never doing the dirty work, getting your jollies off pissing people off...whatever..
I don't think anyone here gives a shit what you say or what you do, except for the pure amusement factor, of your feebile attemps..
That's all I have to say about the anti-keyclown / rec radio police or whoever is on their mission from god...
Also, I dont have any radio equipment for sale, or even own, so get bent.

-my real name.... Ryan
-from my real town... Chicago
-my real opionion... Fuck You

>FYI: when CBers say "10 meters" what they mean is "freeband".
>

I respectfully disagree. When CBers refer to freebanding, they call it by that name.

10 Meters is a different animal. Most CBers understand the difference.

QRM

2740. European CB Frequencies?

Newsgroup: rec.radio.cb

Hello All:

I need a web site or reference that will tell me all the European CB Frequencies.

Thank you.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station. (110 degress's F yesterday!)

2741. Re: cobra 29 question

Newsgroup: rec.radio.cb

Does the meter fluctuate from incoming signals when unit is plugged into an antenna?

ok i have an old cobra 29..... It lights up and transmits. But there is no recieve... just a soft hiss from the speaker and the meter does not move on rx. whats wrong and what parts are needed to fix it?

FYI: Older 23 channel cobra 29 made by dynascan corp

mike was wired correctly

squelch was turned down (squelch does work... sound from spkr does stop when sq is turned up

RF gain was turned all the way up

Unit was plugged into an ant...

Probably correct but this particular cat claimed to be a real raw newbie so
he got the benefit of the doubt.

Jay, You are well repected by whom, Train,Twisitie, Mopar, Randy, Tim,
Pinhead, wow you really impress the hell out of some fine individuals.
Hey have you sent anymore of those piece of shit mastodons to NJ so they can
burn up. Like Franks did, yeah your well respected alright. Your opinion
about me means nothing to me Jay, I consider the source.

<Jay, You are well respected by whom, Train,Twisitie, Mopar, Randy, Tim, Pinhead, wow you really impress the hell out of some fine individuals. Hey have you sent anymore of those piece of shit mastodons to NJ so they can burn up. Like Franks did, yeah your well respected alright. Your opinion about me means nothing to me Jay, I consider the source.>

Proziac, I respect even you, not for what you say, or the ways that you go about getting your points across, but simply because you are a human being(unless you prove otherwise). Why must you drag others whom choose to remain silent on issues, into the frays you have with other posters? If you will go back in your archives, and read what I have written, there have always been reasons for my stance on certain issues. I know I remain somewhat of an enigma to you.....you can't really figure me out. I understand that somehow irritates you. You like to have things in black and white, and are unable to see any shades of gray. Sad as it may be, that is your problem, and dragging me into whatever problems you have created for yourself will not change that. I would much rather you confront me on an issue, and let me reply to it. I am my own person, have my own beliefs, and do not wish to be lumped into a "group" by someone who knows nothing of me.

If you wish to debate a point with me, you have my email. But then again, I really don't think you have it in you.

2747. CB World is back and on the web.

Newsgroup: rec.radio.cb

Message-ID: <fdec78bf.0106240742.f6515ae@posting.google.com>
Source record: 86887

CB World Informerï¿½ was first published in July of 1996. The first issue for August of 1996 included a review of the ChipSwitch. This 6 page review covered the complete operation including the user manual. An explanation of the functions of the radio after installation. Also a list of equipment needed to perform the installation with a supplier, supplier part numbers and prices. In addition to this article there were others including How To Make The Best Solder Joints, Slick Tricks On Microphone Wiring, Proper Base Station And Mobile Grounding and Advertising Claims...Smoke And Mirrors?.

This newsletter started just as the CB Radio Magazine by the publishers of Popular Communications was about to end publication. The focus of CB World Informerï¿½ was the area of conversions, modifications, out of band operation and other aspects of the hobby that CB Radio Magazine or Popular Communications wouldn't cover. Our reviews were totally unbiased. This was easy because we didn't offer advertising. Manufacturer's had to make it with good products to get good reviews, not by contracting to buy full page ads for months at a time.

I invite you to check out the archives. A new web issue is in the works!

2748. Newbie CB Operator.. getting started

Hello,

I recently bought a Uniden Washington Base CB radio and a A99 SOLARCON base antenna from Thomas Distrbuting. I haven't connected the antenna yet. Before I get started transmitting and recieving, what things should I know? I have on my wall papers which have Q codes and 10 codes and other useful information above my radio. I am going to use Sideband alot for more further away contacts. Does anyone have this radio out there in this newsgroup? I would appreciate comments about the radio and the things I should know.

Tom

Wrong. This is the kind of thing which contributes to the confusion and flames found in rec.radio.cb.

If you want to be technical, 11 Meters is 27.272727 MHz.

10 Meters refers to the ham band which begins at 28.0 MHz.

Between the legal 40 channels and the ham band lies the portion regarded as "free banding", a non-authorized group of channels where you take your chances.

Yrac

>the radio and the things I should know.

Hi, Tom. Welcome to the CB world!

Sounds like a nice base station you are putting together. Be certain that the A-99 is hooked to a good ground rod. If it is a used antenna, handle it with gloves. Exposure to the weather can loosen the fibers. If it is new, you should have no problem. You may wish to apply a coat of Armorall so it will last a little while longer.

Use a good grade of RG-8 coax. You can Armorall the coax, also. Apply some weather-proofing compound to the connector at the base of the antenna, after you tighten the coax connector snuggly. Use tie-wraps to secure the coax as it comes down the mast so it will not flex in the breeze.

Lets get something straight Jerry and Dick. My question was about "10" meters and nothing else. I don't play on the frequencies where the cb'ers play. You people sure have a warped mind trying to read something into a question that just doesn't exist. I have been a ham for over 30 years and my question was related too just that - "HAM" use, 28 MHz...

NOW do you understand the question, if it was any of your business. I know the owner of the radio for sale did.

The 4/12 limit is only for Earth... The planet Croutonn, the planet I come from, there is a MANDATORY limit of 50,000 watts...

You see, on the planet Croutonn, if you run less than 50,000 watts, you are NOT ALLOWED ON THE CB BAND.... PERIOD!!!! (We do have problems with people running less power... we even had someone running a 4 watt export CB radio from the planet Earth... It was a Uniden 501XL) ((We tracked him down and made him buy a HUGE amp.))

You see, you earthlings just don't understand that a big station, is the ONLY station that needs to be heard, and a big station is the ONLY ones heard...

So..... Put Up Or Shut Up....

A.K.A. "G-Man" on AM, 551 Chicago on SSB. (Everytime I visit Earth, I go to Chicago... They got great food there!!!!)

Dave Or Debby,
The best pizza place out here is a place called "Gianorios" (Pronounced: "Gee-and-ah-ree-ohs") that's located on Geneva and County Farm Road, on the southwest corner...

They got the best... You name it, deep dish, thin crust, double crust, you WILL NOT walk away feeling hungry, or dis-satisfied.... I GURANTEE!!!!

There are HAM operators here on the planet Croutonn, BUT they must buy an Export amp from the planet Earth that has an ERP of NO LESS than 50,000 watts, and furthermore, they must chat on the Superbowl Channel 6 AT LEAST 2 hours a day, otherwise they forfeit their HAM license... (They must get their numbers called at least 6 times whithin that period too.)

We have no N8's out here... The simple reason is because people like N8 can't afford the cost of a 50,000 watt Export amp from the planet Earth... Hell, people like N8 couldn't even afford the shipping from planet Earth to the planet Croutonn, which is exactly 12.561 Parsecs away...

(We do have transporter technology, so the shipping on a amp like that would only be $27.00 in US funds, so hence, N8 couldn't afford the shipping...)

A.K.A. "G-Man on AM, 551 Chicago on SSB.

Hey Pinhead,

If you are going to forge posts from AntiKeyClown Group then...

1) don't use phrases like "cotton pickin" and "butch up bitch"
2) use spell check
3) figure out that N7VCF is not Frank

What an idiot.

Pinhead, If you are going to masquerade and stir up shit, you must learn to use spell check (you did pretty good this time) and leave out tell-tale phrases like

"heck". Also, we hate to tell you, but N7VCF is not same the Frank G. you think it is so you will have to leave out that callsign.

I thought so but I had missed the last Anti meeting, when this stuff was being discussed.
Ill have to catch up at the next roundtable.
Don't forget to set those transmitters at 4 watts AM / 12 watts SSb.

I really don't understand what the huge issue is about someone using an amp.
Some guys up on 75 meters run 10 to 50KW (legal limit is 1500 watts) with
old water cooled commercial broadcast amps. So what? As long as they keep
it clean and they don't make my toaster talk I could care less.

I agree.....
Get a life, get a grip, get a clue, get a job; buy a friend. Above all,
mind your own business.

Find a big ol' DaveMade linear (Armorall the piss out of it, that will gain you 3 or 4 more watts). Fire that puppy up and start talking AM on 27.385 MHz. If anyone tells you that ch. 38 is for side band, just tell them they are "in the back of the bus". If your neighbor comes over and says he can hear you on his stereo, tell him to apply some Armorall to it. Be sure to also tell him he has a cheap stereo, then offer him a beer.

These specs were accurate last year, but may not be completely accurate now as Europe is undergoing a development process which will eventually allow all countries to use SSB. Some countries may now have SSB, which previously did not.

Austria 26.965 - 27.405mhz 4w FM
Belgium 26.965 - 27.405mhz 1w AM, 4W FM/SSB
Croatia 26.965 - 27.405mhz 1w AM, 4W FM/SSB
Cyprus ???
Denmark 26.965 - 27.405mhz 4w FM
Estonia 26.965 - 27.405mhz 4w FM
Finland 26.965 - 27.405mhz Three specifications available, 5w AM/FM, 4w FM, AM hand held on 27.095mhz only
France 26.965 - 27.405mhz 1w AM, 4w FM/SSB
Germany 26.565 - 27.405mhz 1w AM on 12 channels (4 to 15), 4w FM on all 80 channels
Hungary 26.965 - 27.405mhz 4w FM (mobile) 1w FM (base). Also 26.515 - 26.955 (with a few 20khz gaps) 4W AM, 12w SSB (mobile) 1w AM, 3w SSB (base)
Iceland 26.965 - 27.405mhz 2.5w AM, 4w FM
Ireland 26.965 - 27.405mhz 4w FM
Italy 26.965 - 27.405mhz 4w FM, 5w AM/SSB
Latvia 26.965 - 27.405mhz 4w FM
Lithuania 26.965 - 27.405mhz 4w FM
Luxemburg 26.965 - 27.405mhz 4w FM
Malta 26.965 - 27.405mhz 4w FM
Moldova 26.965 - 27.405mhz 4w AM/FM
Netherlands 26.965 - 27.405mhz 4w FM
Poland 26.965 - 27.405mhz 4w AM/FM/SSB
Portugal 26.965 - 27.405mhz 4w AM/FM, 12w SSB
Romania 26.965 - 27.405mhz 4w FM and 27.410 - 27.660mhz 12w SSB
Slovak republic 26.965 - 27.405mhz 1w AM, 4w FM
Slovania 26.965 - 27.405mhz 4w AM/FM, AM to be disallowed in 2003
Spain 26.965 - 27.405mhz 4w AM/FM, 12w SSB
Sweden 26.965 - 27.405mhz 4w FM
Switzerland 26.965 - 27.405mhz 1w AM, 4w FM/SSB
Turkey 26.965 - 27.405mhz 4w AM/FM
United Kingdom 26.965 - 27.405mhz 4w FM, also 27.60125 - 27.99125mhz 4w FM (80 channels in total)

2792. Alignment tools

Newsgroup: rec.radio.cb

I'm becoming interested in learning how to peak my own radios. No good electronic stores are near me so I need to buy my alignment tools online. Anyone know the most common sizes of hex tool I will need? Do I need a plastic screwdriver? I found some stuff for sale here but don't know which ones to buy.
http://www.action-electronics.com/toolidx.htm#Align

Sorry for the off topic post, I'll try to include something about illegal CB next time.
Bob

That's GREAT & Funny !
Dave!!!!!!!!!!!!!!!

"WBec755320" <wbec755320@aol.com> wrote in message
news:20010624162820.22637.00000439@ng-cv1.aol.com...
Dave Or Debby,
The best pizza place out here is a place called "Gianorios" (Pronounced:
"Gee-and-ah-ree-ohs") that's located on Geneva and County Farm Road, on the
southwest corner...

They got the best... You name it, deep dish, thin crust, double crust, you
WILL
NOT walk away feeling hungry, or dis-satisfied.... I GURANTEE!!!!

There are HAM operators here on the planet Croutonn, BUT they must buy an
Export amp from the planet Earth that has an ERP of NO LESS than 50,000
watts,
and furthermore, they must chat on the Superbowl Channel 6 AT LEAST 2 hours
a
day, otherwise they forfeit their HAM license... (They must get their
numbers
called at least 6 times whithin that period too.)

We have no N8's out here... The simple reason is because people like N8
can't
afford the cost of a 50,000 watt Export amp from the planet Earth... Hell,
people like N8 couldn't even afford the shipping from planet Earth to the
planet Croutonn, which is exactly 12.561 Parsecs away...

(We do have transporter technology, so the shipping on a amp like that would
only be $27.00 in US funds, so hence, N8 couldn't afford the shipping...)

A.K.A. "G-Man on AM, 551 Chicago on SSB.

>WHAT is the 20 on the good Chicago Pizzas? !
>
>Hey Salad Croutonn land--what do you do with Ham radio operators there, or

Bob, it would probably be a smart idea to take the radio to someone who does that kind of work. A stock radio, out of the box, would not need 'alignment'. What people are doing is changing components, jumpers, diodes, and/or adjusting voltage regulators etc in order for the radio to produce more output than it was designed for. I am sure there are a lot of people who have sucessfully modded a radio, but, as for myself, I can't see pushing a radio hard to obtain half a S unit difference on the receiving end. The signal may no longer be clean, and you may possibly shorten the life of some of the components. I'm not saying this WILL happen, but is it worth it for half an S unit (or even a whole S unit) at the other end? In any case, should you turn the wrong gismoes or jumper the wrong pads, you may well damage the radio. If you insist on doing it yourself, at least get the schematics for the radio. That will help you see what you are doing. If you don't understand them, they may help someone else correct any mistakes you make. Definately not recommended for the newbie in electronics.

2808. W. Memphis Ch. 5 Shop SICK history?

Newsgroup: rec.radio.cb
Date: 2001-06-25 00:30:14 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3b367c02@news.planetc.com>
Source record: 86897

I talked to someone who is related to the BIGGEST CB THIEF BUTCHER SHOP in the nation yesterday, W. Memphis Ch. 5 CB shop. They told me something so bizarre that I had to report it, to see if it is true. This is WORSE than Jerry Springer, so you with weak N8 stomachs STOP reading this NOW !

What these related to the people there told me is that the owner is a MAN named Kay that use to be a woman (A He-She). Did she change her name?

They also said that after Kay got THE Unlawful operation, she (or he) Divorced her (or his) ex-Husband and now he is thieving it with his own CB shop on some highway in Arkansas. They also said that these people are big time druggies, which would explain why they BUTCHER customers equipment, and have narrowly escaped DEATH on 1 occasion that I heard from someone else that directly told me that he was going to SHOOT them but his wife stopped him! One of these druggie places or people involved got even a preachers daughter in trouble with drugs, they said.

They said that the drivers that know call IT a "HE-SHE" right over the CB !

IS this stuff I heard TRUE, or is it just a truck driver story? They said their last name is Alexander. If anyone knows anything else, post it or e mail me directly. They didn't know why they were still even there, meaning that they should of been BLOWN AWAY for all the unlawful things they have done to customers so far!
Dave

2809. no-ground antenna for handheld

Newsgroup: rec.radio.cb

i bought a window mount antenna to use with my handheld cb when i am in a vehicle. it uses no ground-plane and it has some kind of coil built into the plug on the radio end of the coax. this all comes with the warning that i should not fool with the coax or try to modify it. i need a bnc plug where the other one is! so what is the deal with the original plug? can i just replace it and use the same coil as before? will the different dimensions of a bnc plug change anything? and what is this extra coil doing here in the first place?

Do you need a plastic screwdriver? If you need to ask this kind of question, then certainly you need a golden screwdriver as well. You should be able to find one of those on the web. For what you are going to pay for even a low end o-scope, you could buy several radios. A good electronics store would tell you that a perfectly functioning radio probably doesn't need to be peeked. If you have a bad shop nearby, take it to them because they will most certainly agree with you that it needs to be peeked. I recently found a good source on the web where you could purchase surgical supplies. Since you are into tearing into things you are not familiar with, better get a set of those as well because you just never know when you might have to perform open heart surgery.

Obviously none in Europe.
I'd be very interested to see a list like this for the whole world. The African and Asian areas may be an eye opener. I have heard of countries where you are imprisoned for ownership of any radio transmitter, and other countries where there is no regulation and anything goes (mainly cos there are no radios).

Sorry, I guess I'm a little behind the times. Used to be that half the fun of radios was fooling around with them and learning something about how they work. It seems that today, radios are just for talking on. I wouldn't want to goof up this $5.00 CB I got at a garage sale so I guess I'll just sell it on Ebay and find another hobby.

Best regards,
Bob

IllegalCBStinks <nospam@newsranger.com> wrote in message
news:nv6Z6.6404$yp1.227282@www.newsranger.com...|
| Sir, many miscreants in this NG use the UK as an excuse to proliferate
| modifications to CBs used in the USA and to sell illegal amplifiers. Are
| amplifiers legal in the UK on CB? I think NOT. What is the max power level
| permitted?

The following is intended as a statement of facts, and must not be taken as an indication of my being on anybody's side. I have no wish to take any side in any disagreement, but I am willing to give information which may be of interest to any person using this ng.

UK INFO
Maximum power is 4 watts.
RF amplifiers are NOT allowed on UK cb radio equipment. This includes both RX and TX amps.
The sale of RF amps is LEGAL, as they can be used by amateurs.
FM is the only mode allowed.
We can DX as far as we wish - distance no object.

SOME FACTS WHICH MAY (or may not) INTEREST YOU.
When CB was first legal in the UK, some of the rules did not seem to be well thought out.
eg: antennae rules (27MHz)
max length of 1.5 metres,
base load only
max antenna erp of 2 Watts !! (Why give us 4 watts, and then take back 2 Watts ?)
if the antenna was mounted above about 21 feet, you had to use low power (400mW)

This lead to many people having small antennae, low to the ground, in the loft, or breaking the low power rule.
Not the best conditions for the CBer, or TVI / EMC.

The vast majority of homebase antannae available back then were illegal.
Many mobile antennae were also illegal because of size or loading coil. Most home base CB stations used illegal aerials.
Another problem was that many people still wanted what they considered to be 'real CB' -- AM on the US band.

How was this dealt with ? Well they changed the antannae rules to allow upto 5/8 wave, and gave us the CEPT band with FM. With legal CBers now using the 'mid' band, but with FM, most of the AM use has disappeared. Now you cannot even give a US AM only radio away.

A more recent problem was people converting their old 27/81 sets to cover CEPT frequencies. Dual band radios are now legal. It is still illegal to add extra channels to a single band radio, but the dual band radios are that cheap that its not worth it.

Illegal use of SSB equipment is still fairly common. But in the UK, legal and illegal users are generally very tolerant of each other.
As for the RIS (radio investigation service), they are under manned, under funded, and overworked. If you cause inteferance, they will come looking, they will find you, and they will bust your a$$. If you don't bother anyone, then they havn't the time.

Respectfully,

Peter

Right. I guess the old saw 'if it ain't broke, don't fix it' works for me.
As to the standing waves around antennas, I was a radioman in the Navy
during Vietnam and was ALWAYS looking for waves. Didn't see any at sea
though (at least not those kinds of WAVES).

Bob, I'll offer my apology. You know, I almost did say go ahead and tinker if it is an old junker. In the case of an old set, it very well might need alignment. Still, I'd really prefer to have a communications test set - or a spectrum analyzer - and a dummy load. The analyzer will show carrier output as well as spurrious outputs; the test set can give you known stable frequencies to listen to .... the truth is that you really should have the proper tools to attempt tuning the radio. I figured that out 35 years ago when I saved my parents a bit of money and installed a muffler and tailpipe myself. It didn't take long to figure out that if the car was on a lift, things would be a whole lot easier! I think I came up with words I didn't learn the meaning of for a few years (after I was in the Navy).

I got my first suspicious attachment about a week ago. I clicked to open the thing (I've got the virus checker running at all times) and lo and behold, up came Zone Alarm. It stated that I would be VERY STUPID to open the attachment. I deleted it. Oh yes, a few days later, there was an update for the virus checker. I updated.

Subj: Looking for Texas Star distributor besides H&Y
Date: 6/24/01 9:30:37 PM Eastern Daylight Time
From: kd6tas@netzero.net (Bill Eitner)
To: cbtricks@yahoogroups.com, rec-radio-cb@yahoogroups.com,
CB_Clinics_Of_America@yahoogroups.com

I need to place a pretty good sized order, but I'd rather not
deal with H&Y. Their customer service is terrible, they overcharge
on the shipping, and their packing is inadequate.

If anyone reading this knows of or is a Texas Star wholesale
distributor that can match H&Y pricing and do better in the
areas I mentioned above, please e-mail me.

Thanks in advance.

Hi,
anybody have any mods or know where I can find them for my TRC-57?..
I had one years ago and the freq. was expanded quite a bit so I would
like to do the same with this other radio as well...
Any help would be appreciated.
Thanks-Russ

With the information provided, the Psychic Hot Line might be more
productive.

Best advice I can give you is check the fuses and connections and do a
visual looking for smoke stains, etc.

When you get this far, and nothing works, give us a bit more data on the
installation including your test equipment. Do you, for example, own a
multimeter? Do you have a schematic? Can you read one?

Boy, what deals... I guess the prices of computer components have really dropped in the past 10 months.... Either that, or your great deals, weren't so great at the time... :)

A Maxtor 8.4Gig drive for only $104?? I can buy a Maxtor 40Gig 7200 RPM for only $123...
How about that 32Meg PC100. Damn expensive at $35. How about a 256 Meg PC133 for $29? These are the prices I can buy this stuff for, online, right now.... Hell of a deal you were cutting there Doug!

The date on ther original posting indicates it is almost two years old. Might not have been a bad deal back then. Prices continue to drop.

If you have an old junker, go play with it. You implied that you had a good new radio. If you screw with it, great, but it renders it illegal to use, so make the choice. It's your dime. Radio repair and modification is not a part of CB as such, but perhaps you are actually seeking some education in general radio repair. This could be quite rewarding and fun. Note that there is a distinction between using radios and working on them.

The entire question pool is available for downloading from www.arrl.org. There is a test generator available to use at www.qrz.com. If you want explanatory information, spend 20 bucks and get the Gordon West book for the Technician exam. It will substantially explain every question and every answer which might require some explanation. The exam is based upon general operating rules for the most part. There is very little electronic theory involved. To study, you simply need to memorize the rules. How someone else would be needed to help other than to provide moral support is a mystery.

Go here Tom http://www.panther-electronics.com go to there RADIO FORUM
and you will be amazed at what you can find. You can use the search engine
also, good luck. They have everything there.

2845. Re: What's better? A 102" whip or a 5/8 wave mobile???

Newsgroup: rec.radio.cb
Date: 2001-06-25 15:23:10 UTC
From: The Landshark <S3Buell@PacBell.Net>
Message-ID: <KFIZ6.3$5m1.2725@news.pacbell.net>
Source record: 86935

Hello & Good Morning all,
You ask what were my test? Well they went like
this:

Truck was on level ground with the idle set at
2K rpm.
Measured 50' from each side (Right, Left, Front,
Back)
Marked a spot for an 8' ladder at each of those
locations.
Used a tone generator
Started at 3pm position and took reading, then
went clockwise and took a reading at each station
with a 102" whip.
Did the exact same thing with a Quad Wound 6'

The Quad wound got at least 20 to 30 % increase
in strength over the whip. We then moved the meter
out to 75' and got similar readings.

While not set to the most scientific standards, we did
do two other test, the same way, on different vehicles
and the results were the same.
The 102" at $10.00 to $15.00 is hard to beat for
performance value. But to have to drive around hitting
tree's over hangs, hell I was stuck in traffic and was
hitting the girders on the bay bridge makes it a real
pain. I figured if I can get an antenna that was shorter
with equal or better performance I would be happy,
though it does cost around $20.00 to $28.00.

Do they have any "6th Plankers" out there on Crouton? Dave would be very unhappy if so. Also, just curious, do you use 1000 Island or Oil & Vinegar as a lubricating agent?

Jeff

Well, I can only think of one logical thing. Since it is a magnet
mount, and when it is on a vehicle, the antenna (through the magnet)
doesn't provide the greatest groundplane. It is grounded through the
coax sheild, back to the radio, and through to the chassis from there.
Unless of course, the antenna is designed to be used without a
groundplane. But, even then a grounded antenna will still out-perform
the mag-mount. So, the best would be to get a base antenna, and make
sure it has a good ground, since the antenna and the ground are the
two most important things in a radio setup. If you must run the
mag-mount on your base, place it as high as possible, and ground the
chassis of the radio to a grounding rod. It's still a lightening
hazard, though. If anyone disagrees, or has a better idea, share with
the rest of us. This is just a guess on my part, from my trials,
with different cb, setups.

Hello Dave: Yes I'll bet you can get that kind of money for one of the old NOS Hy-Gain Penetrator 500 antennas. But thats kind of a real high price for setting on the shelf for a while!

I rebuilt the old Hy-Gain Big Gun II from a pile of rusted wire, broken and bent pieces of aluminium tubing, and all kinds of missing parts pieces, and nuts and bolts. Replaced all the fiberglass rods, and all the wiring, and had new brackets machined. I did it for the love of the older antenna being a real museum piece of old CB history. I can say this because I am sure I lost money on the deal.

I didn't make any money on the antenna. It cost 150 dollars for the honour of taking the remains away, but then again I have never seen one of these older 4 element quad antennas before. So for me it was a big kick to see it get put up and used. This needs to have a picture taken and put on the front cover of Popular Communications, I'll be standing in the front having a tall cool one, Miss Dinah hanging all over me, with the Big Gun 4 element quad antenna in the back ground.

The caption should say: Shoot skip?

http://www.hamtest.com/
That might help. And, it's free.
Try searching (via AltaVista, or others) for amateur radio practice exams.
AA9PW had a really good one, but I think they're reworking it.
Also look at http://www.qrz.com and http://www.arrl.org The ARRL should give
you some useful information on elmers to contact in your area.

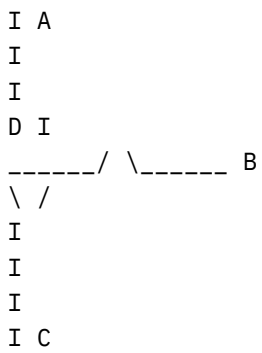
Make a ground plane for it to sit on



A,b,c and d are nine foot wires. The center is a piece of
steel that you can set the magnet on. You can lay this flat on the
ground or droop a,b,c and d over the peak of a roof.

Yes this was great thing that happened! It showed where excessive loss's
where at in the design. I have covered a lot about this in later posts.

Thanks for asking. The design has beed radically changed, to the newer
model, the Interceptor Ten Thousand. Or I-10K. It uses a very low loss
elevated vertical element, type design, that reduces a significant
amount of loss.

Prototypes have been made showing 3 to 4 dB more energy to the antenna
and receiver as compared to the Mastodon 5K. This really shows up when
used in the VHF Low Band. I have a Prototype for one of the local
municipal groups, being used at VHF Low Band that showed almost 7 dB
more field strength as compared to there old antenna.

Most DO state that they are designed for 50 ohms.

It is possible that the transmitter output does not have a 50 ohm
impedance but, for a good design, it would. A 50 ohm output impedance
would be necessary for full energy transfer.

Furthermore, what you are saying here still does not jibe with your
earlier claim that reflected power is recombined with forward power.
This is only possible with a conjugate match. How can a CB transmitter
have a conjugate match with the unknown input impedance of your
transmission line? If this did happen, it would be purely coincidental
and the odds against this happening would be extremely high. How could
the factory know what impedance your radio must be to match your
unknown transmission line input impedance?

In short, your original claim still doesn't hold up even if the
transmitter output impedance were not 50 ohms.

> Look very carefully at any
> manual and tell me where it states the "internal impedance" is 50 ohms. All

> power. In all most all cases you can't extract maximum power without
> exceeding device ratings. There are several very technical articles written
> covering the last point. The most recent of which appears in the book
> "Reflections II" by M. Walter Maxwell.

You do want maximum power transfer and, for a properly designed CB, it
will not exceed the device ratings. This is nonsense.

I've seen the Reflections article before but I forget exactly what it
says. If my memory is correct, it speaks mostly of conjugate matches --
something you do not get without tuning your transmitter output (not
even possible on many new CBs) or with an antenna matcher. THIS IS
NOT THE TYPICAL CASE FOR A CB'ER. The typical CB'er has a 50 ohm output
impedance and this absorbs all of the reflected power.

Give me a link for the article and I'll review it.

You are confusing the issue. This re-reflection is only possible with
a conjugate match. Without tuning for it, you cannot guarantee a
conjuage match and most likely will not get it.

Did you ever consider that the added ferrite actually changed the SWR?
When the reading changed, it is because the SWR actually changed.
There is nothing wrong with the meter.

This current is on the outside of the coax because there is NO opposite current on the inside conductor. That it why these are called common mode currents (versus balanced mode).

> The total
> current on the inner conductor matches that on the shield, inside and
> outside,

Absolutely false. How about current on an antenna element? Is there a matching current on the inside somehow? No. It is the same thing.

> but the inside shield current does not match the inner conductor
> current. Remember all of the calculations assume the two currents are equal,
> inner conductor and the inside shield current. If they're not all bets are
> off.

My calculation made no assumptions about common mode currents on the outside of the coax. They have no effect on the accuracy of the SWR reading.

Dak Mark IX contains the MC145106, MM55106/116/126 which is a full feature version of Motorola binary PLL line (the only one still being manufactured). This chip is basically a robust version of the MB8719. This chip is still being used many "export" radios (Cobra 148GTL-DX, Superstar 3600/3900, Galaxy II/Saturn/Pluto... etc.).
It would be an understatement to say this "brain" is being under utilized in that 40 channel radio (since it acts as the brain to many 240 channel radios).
You could take advantage of the full potential of this chip by changing a mixing crystal (vco currently uses 16.27/16.71 MHz). Export radios use a rotary switch to inject different freqs into the vco circuit:
Band A: 15.37 (ch. 1) to 15.81 (ch. 40)
Band B: 15.82 to 16.26
Band C: 16.27 to 16.71 <====U.S. 40 channel band
Band D: 16.72 to 17.16
Band E: 17.17 to 17.61MHz
Or, more simply, by manipulating the binary programming of this chip with a couple of switches.

RV202 is your modulation (or remove Q202), C714 is AM power.

BTW, I take no responsibility if you butch your radio and it stops working or if you get RF burns on your lip because you turned the power up too high. =)

A magnet mount is capacitively coupled to the car body. You do NOT
want current flowing on the shield. Use Tnom's ground plane idea.
That works as an artificial car for the antenna to work with. The
antenna is only half of the system. The ground plane is the other half.

> Unless of course, the antenna is designed to be used without a

Yeah thats right Train, if you read the FCC rules for frequency
tolerance in the Citizens Band Radio Service, you will see that
frequency 27.366 MHz is within the allowable frequency tolerance. And is
not between CB Channels.

The amateur gear probably would have been cleaner than most cb stuff.

Most guys that get good amateur gear usually wind up getting their ham
lic.

Sure. The cheap, quick and dirty way is to get a steel pie pan form at the grocery store and then add a few radials by drilling small holes around the edge to attach screws and wires. Random lengths for this should work fine. Add another hole or two off center to attach to a piece of wood in the attic or outside. If the thing is to be exposed to the elements, paint the pan to prevent it from rusting.

This writer apparently does not realize that the FCC is divided into
departments, each with an area of responsibility.

Those concerned with enforcement in ham and CB areas will NOT be distracted by
cellular matters. That division is down the hall.

> It is possible that the transmitter output does not have a 50 ohm
> impedance but, for a good design, it would. A 50 ohm output impedance
> would be necessary for full energy transfer.

You have to be careful when you talk about output impedance. I had exchanged E-mail with another gentlemen about this issue. The example he mentioned was 50 ohms source impedance (resistive), and a 50 load impedance (resistive). If the output impedance was really 50 ohms resistive then it is physically impossible to get an efficiency higher than 50 percent. Since we know from experience that efficiencies can be much higher that logically implies that the output impedance of the source can not be 50 ohms resistive.

For I hope a simple example of how this can happen without writing a book on the subject consider the following example. We will make it simple by assuming we have a DC source of variable voltage. We also arrange to include a "Hall Effect current sensor" in one of the output leads. This kind of sensor is able to monitor current without consuming power, I use these at work, and the DC source is a high efficiency type, greater that 90 percent regardless of the output voltage. All I need do is arrange a negative feedback circuit from the Hall Effect sensor to the voltage control on the source, i.e. higher output current causes the output voltage to drop. By selecting the ratio between the output current and the output voltage I can get the combination to simulate a wide range of output resistance's without the need to place any resistance's in series with the output of the source. This is what the article I referred to earlier, in a prior post, as a "nondissapative resistance", which is the term the author used. The source output "looks" like it has a certain real internal resistance, but in fact it is an artifact of how the circuit operates. There is no real resistance inside of the source. Much the same occurs in the output stage of a transmitter or amplifier. If this was not true then there is no way to explain the paradox in the example in the preceding paragraph. You should read the article, it's about 8 to 10 pages long. The primary problem in understanding the concepts presented there is realizing just because we call something a resistance of so many ohms does not imply it dissipates power. We call the common variety of coax "50 ohms" but I'll bet nobody will make the silly mistake assuming all the power is dissipated in the coax as if it was some long sake-like resistor.

> Furthermore, what you are saying here still does not jibe with your
> earlier claim that reflected power is recombined with forward power.

If there is no "dissipative" resistance in the output there is nothing to absorb the reflected power. If the reflected power can't be absorbed by the output, it can't just "disappear" so it must be reflected from the output back towards the load.

Now consider the case lets say an amplifier and a crappy antenna are connected together so we have a poor SWR on the line. Now introduce a tuner between the amplifier and the antenna. After adjusting the tuner we find we have a perfect one to one SWR between the tuner and amplifier but we also discover we still have a really bad SWR between the antenna

and the tuner. Now we know that some of the energy traveling towards the antenna will be reflected back towards the amplifier. But the SWR at the amplifier output before the tuner is good, so what happened to the reflected energy? It had to be rereflected by the tuner back towards the antenna. Now be can move the tuner closer to the amplifier as we like. So heck, lets put the tuner elements inside of the amplifier and combine it with the other matching network components there. Those load and tune controls work the same kind of parts in the amplifier as they do in the tuner, just different values. Now we have the situation I claimed at the beginning where the reflected power is rereflected off the output of the source.

Granted the componets in the output are not "perfect lossless" inductors and capacitors so some fraction of the refected energy will show up as heat in them.

> This is only possible with a conjugate match.

A conjugate match is when r1 + j * x1 = r2 - j * x2 where r1 = r2 and x1 = x2, and either the source, or the load, impedance is Z = r1 + j * x1 and the other is Z = r2 - j * x2.

> How can a CB transmitter
> have a conjugate match with the unknown input impedance of your
> transmission line? If this did happen, it would be purely coincidental
> and the odds against this happening would be extremely high. How could
> the factory know what impedance your radio must be to match your
> unknown transmission line input impedance?

And there lies the problem, they don't match all impedance's. The equipment is designed to produce rated power only over a narrow "known" range of impedance values. That's why you may see a device rated for say 10 watts used in the output, but only producing 5 watts. The extra voltage and current margins are used to accomdate the range of impedance values expected in normal use. Most of the Ham equipment I see spec's a 2 to 1 max SWR for full power output. That's why many rigs have SWR protection circuits built in. The known range of impedance values results in a known range of SWR values. Once the SWR exceeds that design limit the drive level is reduced to the output to try and keep the output device(s) voltages and currents within the manufactures published limits. I'm sure some of you have seen rigs fold-back power when the SWR gets too high. If the rig does not have this protection then the manufacture may have used over rated parts, which may survive lets say a 5 to 1 SWR, for an example, for a few seconds, which maybe cheaper than the SWR power fold-back circuit. For a CB Radio it makes little sense to include such a circuit at a cost of a few dollars per radio just to protect an output transistor that costs one dollar to the manufacture. As the saying goes, the more stuff you put in the more can go wrong, so we also have a reliability issue too.

What you are seeing on the Rain Report is only those with an Amateur connection. It is the Amateur Service that raised enough hell to get an Enforcement Bureau reconstituted so it is the ham bands that are both being policed and defended initially; these are what you get reported. A pure CB or freeband action would not be reported there.

With an international treaty meeting coming up and the US still unforgiven for foisting CB on the rest of the world, now would not be a great time to be trying for DXCC 11 meters.

The only one who cares is Twisted. He's probably has scrapes of paper with posts from this news group taped all over the walls in his house trailer, with lines connecting them together, and spends endless hours trying to make sense of the "evidence".

This is the best idea if you are stuck using the mag mount antenna. Grounding the coax at the radio ends up making the coax a part of the antenna. In general you don't want to do that because you can end up with RF getting in to your audio on the radio or in to other electronics in the house.

Danielsville, GA 30633

Re: Amateur Radio license KE4SVC

Dear Mr. Smith:

Information before the Commission indicates that you have been operating Amateur Radio equipment on Citizens Band frequencies, and on 27.366 MHz, which is between the Citizens Band channels.

Section 308(b) of the Communications Act of 1934, as amended, 18 U.S.C. Section 308(b), gives the Commission the authority to obtain information from licensees or applicants about the operation of their radio station. You are requested to respond within 30 days from the above date, stating the full circumstances of any operation you conducted on Citizens Band frequencies, and the equipment used, since January 1, 2000. Please address your response to 1270 Fairfield Road at the letterhead address.

If you have any questions about this matter you may call me at 717-XXX-XXXX
Sincerely,

W. Riley Hollingsworth

Before the

Federal Communications Commission

Washington, D.C. 20554

In the Matter of)

)

Joshie Yasin Nakamura, Sr.)

800 Weeks St.)

East Palo Alto, CA 94301)

File Number No. 99SF646

NAL/Acct. No. 200132960001

NOTICE OF APPARENT LIABILITY FOR FORFEITURE

Released: March 19, 2001

By the Enforcement Bureau, San Francisco Field Office:

I. INTRODUCTION

In this Notice of Apparent Liability for Forfeiture ("NAL"), we find that Joshie Yasin Nakamura, Sr. has apparently violated Section 301 of the Communications Act of 1934 ("Act"), as amended, by operating an amateur radio station without a license issued by the Federal Communications Commission. Mr. Nakamura has also apparently violated Section 325(a) of the Act by transmitting a false distress signal. We conclude that Joshie Yasin Nakamura, Sr. is apparently liable for forfeiture in the amount of seventeen thousand dollars ($17,000).

II. BACKGROUND

The Commission’s San Francisco Field Office received several complaints between January 26 and March 2, 2000 from amateur radio licensees and the Amateur Radio Relay League (ARRL) Official Observer (OO). They asserted that a radio station was operating on several amateur frequencies, including 445.175 MHz, without proper authorization from the Commission from a residence in East Palo Alto, CA. In addition they asserted that the operator was causing interference by jamming and playing music.

On March 20, 2000, agents from the Commission’s San Francisco Field Office observed unidentified radio transmissions on 445.175 MHz. Also, the

internationally known distress signal "S O S" was being transmitted via Morse Code. The agents determined that the source of the transmissions was located at 800 Weeks Street, East Palo Alto, CA. The agents conducted an inspection and found that Mr. Joshie Yasin Nakamura, Sr. was operating the station without authorization from the Commission and Mr. Nakamura was not in distress. Mr. Nakamura was verbally notified of these violations and issued a Notice of Unlicensed Radio Operation (NOUO) at that time.

The Commission’s San Francisco Field Office continued to receive complaints between July 20 and September 8, 2000 from amateur radio licensees and the OO. They asserted that the same radio station was still operating on several amateur frequencies, including 144.63 MHz from a residence in East Palo Alto, CA and was continuing to cause interference to amateur communications by jamming and playing music.

On September 10, 2000, agents from the Commission’s San Francisco Field Office observed radio transmissions on 144.63 MHz. The agents determined that the source of the transmissions was located at 800 Weeks Street, East Palo Alto, CA. The agents conducted an inspection and found that Mr. Joshie Yasin Nakamura, Sr. was operating the station without authorization from the Commission. Mr. Nakamura was verbally notified of these violations and issued a NOUO at that time.

III. DISCUSSION

Section 301 of the Act sets forth generally that no person shall use or operate any apparatus for the transmission of energy of communications or signals by radio within the United States except under and in accordance with the Act and with a license.

Section 325(a) of the Act sets forth generally that no person shall knowingly utter or transmit any false or fraudulent signals of distress.

Based on the evidence before us, we find that on September 10, 2000, Joshie Yasin Nakamura, Sr. operated radio transmission apparatus without a Commission authorization in repeated and willful violation of Section 301 of the Act. And, on March 20, 2000 Mr. Nakamura transmitted a false distress signal in willful violation of Section 325(a) of the Act.

Pursuant to The Commission’s Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines ("Forfeiture Policy Statement"), the base forfeiture amounts are $10,000 for unlicensed operation, and $7,000 for causing malicious interference. In assessing the monetary forfeiture amount, we must also take into account the statutory factors set forth in Section 503(b)(2)(D) of the Act, which include the nature, circumstances, extent, and gravity of the violation(s), and with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require. Applying the Forfeiture Policy Statement and statutory factors to the instant case, a $17,000 forfeiture is warranted.

IV. ORDERING CLAUSES

Accordingly, IT IS ORDERED THAT, pursuant to Section 503(b) of the Communications Act of 1934, as amended, and Sections 0.111, 0.311 and 1.80 of the Commission's Rules, Joshie Yasin Nakamura, Sr. is hereby NOTIFIED of his APPARENT LIABILITY FOR A FORFEITURE in the amount of seventeen thousand dollars ($17,000) for violating Sections 301, 325(a), and 333 of the Act.

IT IS FURTHER ORDERED THAT, pursuant to Section 1.80 of the Commission's Rules, within thirty days of the release date of this NOTICE OF APPARENT LIABILITY, Joshie Yasin Nakamura, Sr. SHALL PAY the full amount of the proposed forfeiture or SHALL FILE a written statement seeking reduction or cancellation of the proposed forfeiture.

Payment of the forfeiture may be made by mailing a check or similar instrument, payable to the order of the Federal Communications Commission, to the Forfeiture Collection Section, Finance Branch, Federal Communications Commission, P.O. Box 73482, Chicago, Illinois 60673-7482. The payment should note the NAL/Acct. No. 200132960001.

The response if any must be mailed to: Office of the Secretary, Federal Communications Commission, 445 12th Street, S.W., Washington, D.C. 20554, ATTN: Enforcement Bureau – TPSD. The response MUST INCLUDE THE NAL/Acct. No. 200132960001 referenced above.

The Commission will not consider reducing or canceling a forfeiture in response to a claim of inability to pay unless the petitioner submits: (1) federal tax returns for the most recent three-year period; (2) financial statements prepared according to generally accepted accounting practices ("GAAP"); or (3) some other reliable and objective documentation that accurately reflects the petitioner’s current financial status. Any claim of inability to pay must specifically identify the basis for the claim by reference to the financial documentation submitted.

Requests for payment of the full amount of this Notice of Apparent Liability under an installment plan should be sent to: Chief, Revenue and Receivables Operations Group, 445 12th Street, S.W., Washington, D.C. 20554.

IT IS FURTHER ORDERED THAT a copy of this NOTICE OF APPARENT LIABILITY shall be sent by Certified Mail Return Receipt Requested to Joshie Yasin Nakamura, Sr. at 800 Weeks Street, East Palo Alto, CA 94301.

CERTIFIED MAIL–RETURN RECEIPT REQUESTED

Mr. George D. Cairns

705 East Church Road

Waldron, Arkansas 72958

SUBJECT: WARNING NOTICE–UNLICENSED RADIO OPERATION

Dear Mr. Cairns:

The Commission has received evidence that you have been operating radio transmitting without a license on frequencies in the Ten Meter Amateur band and on frequencies near 30 MHz.

Please be advised that operation of radio transmitting equipment without a license is a violation of Section 301 of the Communications Act of 1934, as amended, 47 U.S.C. Section 301, and will subject you to fine or imprisonment, as well as an in rem seizure of radio transmitting equipment.

You are requested to contact me at 717-338-2502 to discuss this matter.

Sincerely,

W. Riley Hollingsworth

Special Counsel

Enforcement Bureau

Normally, Bert, I leave these threads alone. The poster was, apparently, trying to make a point about unlicensed operation in unauthorized frequencies. Since the individual operating on 10 meters was NOT a licensed amateur, it would likely be an appropriate subject both in the amateur and CB newsgroups (since some people here are talking 'taking over' 10 meters). Most likely many of such comments are caused the inflamatory rhetoric being posted by a few hams. In any case, a few years back (in the mid 90s, I believe) there was a wholesale movement into 10 meters by cab drivers in New York City. They were running modified CB radios. That was put to bed by a large inspection of the taxicabs in New York City, with warnings issued about any modified equipment found. Due to the aforementioned reasons, someone apparently decided that this was appropriate to post. I cannot, in all honesty, disagree with that.

That said, it sure would be nice if a few of the hams lightened up a bit - uhhh, better make that a LOT. Trying to flame-bait and insinuate that all CBers are those nasy illegal types plus they are dumb as a rock is going to generate an unpleasant reaction. And I do NOT blame the CB community even a little bit. There are a lot of folks who are active both on CB and on amateur radio ... there are a lot of good folks on both sides of the radio fence. As to the idiots who insist on the stupid, obvious, flames - best bet (if possible) is ignore them. These guys are going to push their blood pressure to the roof doing this 24/7 and put themselves in an early grave.

73 from Rochester (and don't sweat the stupidity - it has always been around, just worse lately)
Jim

There are no specified channel designations other than 9, however
usage of different channels have developed.unofficially. It differs in
different locations but usually 35-40 or 36-40 are used for SSB
communication, and channel 19 is used for mobile travel/info
purposes.

mostly sidebanders like to use between 35 and 40.. if you have a radio
that's AM only (no USB or LSB controls), then it's considered polite to
stick between 1 and 35... It's strictly a gentlemen's agreement,
however.

Ok, sorry I wasn't 100% correct...But, would it have killed him to
ground the radio, and make sure he has a good ground? I was almost
going to suggest to take a piece of sheet metal and then ground that,
and that would hold it down, also....But, in the first place, like I
said...You would be better off just breaking down and running a base
antenna...Hell, grab an ARRL book and make an antenna...Dipole,
mabye?? These were just some ideas...I never said I was the
definitive, information source. In fact, I encouraged people to come
with other suggestions, to work together....Unlike other people who
know what they know, and that is it....I'm reminded of the debate,
years ago...Sean's "real world, no pun intended" vs the "book smarts."

The source impedance is indeed 50 ohms resistive. When you have a
device that creates a change in voltage to a change in current at a
ration of 50:1, it is a 50 ohm impedance. The transmitting device
(transistor or tube) is simultaneously dropping a voltage while
passing current. It is dissipating power even under perfect match
conditions. One little side note: the impedance of the device may
not be 50 ohms but it is transformed through an impedance matching
network to present 50 ohms at the CB radio output.

Linear ammplifiers seldom have high efficiencies. High efficiencies
occur more in nonlinear amplifiers (such as class C) which act more
like switching devices.

Consider this: What if you have two transmitters transmitting into
each other? By your description, all power would constantly be
re-reflected. No transmitter would ever dissipate the power from
the other transmitter. The power traveling through the transmission
line would approach infinity over time. I guarantee that it does
not work this way.

> some long sake-like resistor.

I understand what you are saying here. The problem is that you are now
out of the linear domain. For linear circuit analysis, the
resistive impedance is real in every way. The nonlinear circuit you
describe would behave very differently but this is not representative
of a CB radio transmitter.

> > Furthermore, what you are saying here still does not jibe with your

> back towards the load.

There definitely IS dissipative resistance presented by a linear
transmitting device. See the "infinite power" scenario above.

> Now consider the case lets say an amplifier and a crappy antenna are

> rereflected off the output of the source.

This would also work. But this does not describe your typical output matching network of a CB radio. For ease of manufacturing, most of today's CBs are designed with broad-banded output networks to reduce or eliminate the need for factory tuning.

One other note here. For full re-reflection, a conjugate match is required. A conjugate match is fully dependent on the input impedance seen on your transmission line. You say "all power is re-reflected" which is equivalent to saying "you ALWAYS have a conjugate match." How can your transmitter always have a conjugate match without knowing what impedance it will be connected to?

The manufacturers have answered this question. They design for a conjugate match at 50 ohms. You must have a 50 ohm transmission line input impedance for full power transfer. Why would you want full power transferred at some other arbitrary impedance?

> Granted the componets in the output are not "perfect lossless" inductors and

Yes, the range around 50 ohms.

> That's why you may see a device rated for say 10 watts used
> in the output, but only producing 5 watts. The extra voltage and current
> margins are used to accomdate the range of impedance values expected in
> normal use.

Yes, they are designed to handle the reflected power they would have to dissipate in the event of a mismatch reflecting that power back.

> Most of the Ham equipment I see spec's a 2 to 1 max SWR for full
> power output. That's why many rigs have SWR protection circuits built in. The
> known range of impedance values results in a known range of SWR values.

Yes. Consider this. What does that range of impedances that provide an
SWR of 2:1 or less look like on a Smith Chart?
Answer: a circle centered on 50 ohms.

> Once
> the SWR exceeds that design limit the drive level is reduced to the output to
> try and keep the output device(s) voltages and currents within the
> manufactures published limits.

Yes, to keep the output device dissipation within the manufacturers
published limits.

> I'm sure some of you have seen rigs fold-back
> power when the SWR gets too high. If the rig does not have this protection
> then the manufacture may have used over rated parts, which may survive lets

> an output transistor that costs one dollar to the manufacture. As the saying
> goes, the more stuff you put in the more can go wrong, so we also have a
> reliability issue too.

No argument there.

Hey, you never addressed my item indicating why SWR meters do not
sense voltages at two points. I'll repost it here.

If there were two voltage points at a specific distance, the meter
would only operate at a narrow range of frequencies. Many of these
common SWR meters operate from 2 to 150 MHz. A two-point distance
requirement would make this large operating range impossible.

Ah, yes, divorce.....from the Latin word meaning to rip out a man's genitals through his wallet.

-- Robin Williams-

Women complain about premenstrual syndrome but I think of it as the only time of the month that I can be myself.

-- Roseanne-

Women need a reason to have sex. Men just need a place.

-- Billy Crystal-

You can say any foolish thing to a dog, and the dog will give you a look that says, "My God, you're right! I never would've thought of that!"

-- Sean Connery-

According to a new survey, women say they feel more comfortable undressing in front of men than they do undressing in front of other women. They say that women are too judgmental, where, of course, men are just grateful.

-- Robert De Niro-

I am not the boss of my house. I don't know how I lost it. I don't know when I lost it. I don't think I ever had it. But I've seen the boss's job and I don't want it.

-- Bill Cosby-

In the last couple of weeks I have seen the ads for the Wonder Bra. Is that really a problem in this country? Men not paying enough attention to women's breasts?

-- Hugh Grant-

We have women in the military, but they don't put us in the front lines. They don't know if we can fight or if we can kill. I think we can. All the general has to do is walk over to the women and say, "You see the Enemy over there? They say you look fat in those

uniforms."

-- Elayne Boosler-

There's a new medical crisis. Doctors are reporting that many men are having allergic reactions to latex condoms. They say they cause severe swelling.

So what's the problem?

-- Dustin Hoffman-

When the sun comes up, I have morals again.

-- Elizabeth Taylor-

Instead of getting married again, I'm going to find a woman I don't Like and just give her a house.

-- Rod Stewart-

The problem with the designated driver program is, it's not a Desirable job. But if you ever get sucked into doing it, have fun with it. At the end of the night, drop them off at the wrong house.

-- Jeff Bridges-

See, the problem is that God gives men a brain and a penis, BUT only enough blood to run one at a time.

-- Robin Williams-

Hello all,
I was just curious as to how the velocity factor of coax cable is found...

I mean, if I was given a certain type of coax, how would I find out the velocity factor, not so much the equipment needed to test it, but the mathematical formulas, Etc...

Thanks, and 73's...

A.K.A. "G-Man" on AM, 551 Chicago on SSB.

I don't know the formula either, but the velocity factor for virtually any coax you are ever going to use is very close to 67%, and that's the number I use if I need a reference. The ARRL Handbook has a chart by coax number.

Velocity factor is a valu given in the specs for the coax. Either the coax manufacturer will have this info or you can search for it in your favorite search engine. You then multiply the wavelength of the frequency you want by this percentage to get an electrical wavelength of your coax.

"WBec755320" <wbec755320@aol.com> wrote in message news:20010626012905.20513.00000536@ng-mk1.aol.com...

Well Train, you know it's probaly not that simple. He probaly deserved it. The guy was probaly making his neighbors TV talk, and bleeding over their phone. Or, interfereing with a ham in close proximity. Repeatedly, and being a dick about it. We all know the FCC has better things to do, then randomly cruise around the country looking for CB violations. If you run power on CB and mind your neighbors (espcially if you only talk in the wee hours of the morning). I used to only run some power at about 2 AM....Noone cared..Noone was awake. More than likley, you won't get caught, unless you are pissing people off...If you have some consideration, and mind your business, the'll leave you alone. Right?

> describe would behave very differently but this is not representative
> of a CB radio transmitter.

Let me expound on this statement. The concept of impedance is that there is a direct, linear relationship between voltage and current. The ratio of voltage to current in a circuit is the impedance.

Once you leave the linear domain, the impedance concept is gone. The circuit analysis becomes more complex. Your waveform is no longer treated uniformly. You can no longer analyze the circuit in the frequency domain; you must analyze it in the time domain and look at each point in the waveform individually. This is often done with Spice programs.

For example, what is the impedance of a diode? Because it is a nonlinear device, it is impossible to assign an impedance to it. Your signal may conduct for part of the waveform but not for the other part. How much it conducts is a function of the waveform. You cannot express the signal passed through the diode with a simple transmission coefficient; it is much more complex than that.

When we perform RF analysis/design of circuits that requires "clean" output (i.e. output low in harmonics and undesirable frequencies), we are almost always looking at linear circuits. In these linear circuits, the concept of resisitive impedance is real and holds up in every way -- both analytically and empirically.

You could use a dual-trace oscilloscope and probe a signal at two points
on the coax. You could find the phase difference. This information,
along with the distance between the two coax points and the known
frequency, would allow you to calcualate the transmission speed through
the coax. Compare this speed to the speed of light in free space (3 x
10^8 m/s) and you get the velocity factor.

LOL, you morons.

"Name calling in the subject line, name calling in the first line of the body. Sounds like Leland."

Your little world

"Arrogance in the second sentence. Definitely Leland."

consists of this NG....CB channel 6...

"Jealousy. Damn, Leland, you painted a self portrait."

and
pirate

"Uh no, it's not a pirate frequency as much as you would like to say it, it simply doesn't make it so."

frequency 27.555.
WHO CARES

"You do. Tears are streaming down your dirty, blood stained face."

if you scream people's names or calls on the air?

"Ah, so you DID here your call from high on a mountain range. Tell me, did you key up and try to be heard or talk back to yourself like you do here?"

No one's listening

"You just contradicted yourself. Again. As usual."

except other morons like you.
Make threats,

"Your style, along with the name calling."

talk gangster talk,

"Your style, along with the name calling."

beat your hairless little chests and howl obscenities.

"Um, we aren't the ones using a public newsserver to "hide" Your style, along with the name calling".

Publish the entire US phone book. No one cares or takes you seriously.
LOL!

"LOL!"

if he is going to make a ground plane for that mag nount.. i don't see why he just doesn't make a full 1/4 wave ground plane... considering that that mag mount antenna is not going to perform any better in the air with a ground plane that it will on the car... i suggest just make a full 1/4 wave ant out of aluminum rod the verticle is approx 8' 4" and the same with the 4 ground plane elements.... i used one of them home made for 10 years and i could never complain about standing wave or interference through any neighbours equipment

2949. Re: Velocity Factor?

Newsgroup: rec.radio.cb
Date: 2001-06-26 16:11:54 UTC
From: bgriffey@core.com
Message-ID: <8d83b042.0106260811.14110644@posting.google.com>
Source record: 86978

The velocity factor is a result of several parameters... but mostly
has to do with the dielectric material between the center conductor
and outside jacket. Typical velocity factors for coax used for CB are
around 65%. This means that the wave traveling through the coax is 65%
of the speed it would be traveling in "free space".

I also have to say it is off topic too. The guy was using an Amateur Radio to transmitting IN & around an Amateur band without a license. There is no evidence he is a "CBer", or uses CB channels. It would be more correct to call him an "Unlicensed Amateur", or Ileegal Amateur operator. I'm sure the FCC has sent warnings to violators of the Commercial & Broadcast services too. They aren't "CBers" either.....

Hi Twistedhed,

Actually, this line was part of a response to an AKC troll's message re. an enforcement action on a 10 meter incursion. I assumed (correctly, I believe) that this too was posted by the same AKC troll. I'll likewise assume you've read that one too.

Small advisory message; If you see a post from me that appears to be anti-11 meters, stop and reread it or look for the hidden angle. I'm a staunch supporter of 11 meters to the point of sometimes being verbally "spanked" by some of my ham breatheren for not being a good "convert" and adopting the "anti-CB" line. Don't construe that to mean that I think all hams are anti-11 meters or that all 11 meter operators are angels, I'm just reminding you of who I am and the amazing amount of B$ I've weathered in the support of the band that "started it all" for me.

As for the "Nazi" thing, I've only one uncle and a third cousin left on my mother's side of the family due to them. So no, I don't think anybody can really label me a "Nazi." Just try to factor in the source of the words when inferring their context. Take it easy now and keep the faith.

73 de Egbert...er, Bert (Try going through the NYC school system with that name. It makes the CB vs. ham "thingy" a piece of cake.)

> mathematical formulas, Etc...

the velocity factor of coax = 1/squareroot(dielectric constant of center
insulation)

For example the dielectric constant of Teflon is 2.1 so the velocity factor
of Teflon coax is 1/sqrt(2.1) = 0.69. There are other factors which can
modify the dielectric constant such as "foamed" dielectric where the value
is somewhere between the solid dielectric value and that of air 1.0. If you
check different types of coax, using the same base dielectric material you
will see that the more the dielectric is composed of air the higher the
velocity factor.

Hello Proziac: Yes it is a bargain, thanks again!

Way more that a few pounds of aluminum, more like 15 pounds, also
included is 7 insulators, 24 hose clamps, a bunch of stainless steel
hardware, 4 each 2 inch U-bolts and sadles, and a LC type female
connector, for low loss coax.

And it looks bitchen!

Hmm...looks like I'm the butt of someone's joke. OK, I can take it as well as the next guy. Have I listened to 555 at all? Cute, I was likely "listening" to 27.5550MHz +/- 444.9KHz when you were still in grade school. Not meant to be demeaning, just likely a fact...by all means, read into that. My morals preclude me from a great many things, monitoring 11 meters isn't one of them. Take it easy and thanks for the chuckle.

>
> The source impedance is indeed 50 ohms resistive

And as I said over and over before if both the source and load are both 50 ohms resistive then the efficiency can never be higher than 50 percent. We both know that is not true so your point that the source impedance is 50 ohms resistive can't be correct. If you don't believe me that amplifier efficiencies are greater than 50 percent then call several large commercial amplifier manufactures and simply ask them. That would very quickly settle the argument right there.

> Linear ammplifiers seldom have high efficiencies.

Depends. I have a buddy who designs switching amplifiers as a side line for audio use in a mobile setting. The efficiencies are better than 90 percent and the output is a linear copy of the input but at much higher signal levels. He has built a few of these at power levels up to a few hundred watts. I heard one of his designs, sounded better than many of the commercial amps out there.

> High efficiencies
> occur more in nonlinear amplifiers (such as class C) which act more
> like switching devices.

Class B and Class AB amplifiers are used at RF because they can amplify a modulated RF signal in a linear manner. A Class B amplifier, which by the way is even used at audio frequencies, has a calculated efficiency of 78.5 percent. Commercial RF amplifiers have an efficiency around 70 percent due to extra losses in the coupling components. So even at 70 percent this is way above the 50 percent value one would assume due to your argument.

Of course not. The feed point impedance of the coax would be all wrong, thus you have the wrong loading on the output stage. If nothing was done to protect the output devices they will fail.

There is nothing non-linear about the example. I could just as easily have assumed a perfect voltage controlled voltage source. The results would end up exactly the same.

> eliminate the need for factory tuning.

There is still a load coupling network there, plus there has to be some amount of harmonic filtering required since the output stage is typically a class B power amplifier in SSB CB radios, or Class C in AM radios. For a pure AM only radio a modulated Class C stage has been used. The same audio amplifier used to drive the speaker during receive is switched to modulate the Class C output stage on transmit. That saves the manufacture some money on the design. It's also another reason why AM radios are so much cheap that SSB radios, they don't need a linear output amplifier stage.

>
> One other note here. For full re-reflection, a conjugate match is
> required.

No. A conjugate match would simply absorb all the energy sent in its direction. If you had an open or short circuit you would get complete re-reflection of the energy.

> A conjugate match is fully dependent on the input impedance
> seen on your transmission line. You say "all power is re-reflected"
> which is equivalent to saying "you ALWAYS have a conjugate match."
> How can your transmitter always have a conjugate match without knowing
> what impedance it will be connected to?

You have your terminology hopeless turned around here. In one post you claim that a conjugate match does not cause any reflections and here you do.

> The manufacturers have answered this question. They design for a
> conjugate match at 50 ohms. You must have a 50 ohm transmission line
> input impedance for full power transfer. Why would you want full power
> transferred at some other arbitrary impedance?

Simple. The impedance is very seldom a perfect 50 ohms. If it was you would never see a SWR over a perfect 1 to 1. If the SWR is not 1 to 1 at the point where the SWR meter is at the impedance is NOT 50 ohms. Why do you think that manufactures spec antenna bandwidth in terms of SWR for example? An antenna can only be perfectly at resonate at one frequency. Any frequency away from that the antenna will exhibit a complex impedance thus the miss match. The radio's output stage has to be able to handle that or you would

be constantly trimming the antenna or messing with the tuner.

> Yes, to keep the output device dissipation within the manufacturers
> published limits.

Now you can't have it both ways. Just above you claim the devices are overrated to handle the reflected power. Now here you seem to agree with my view. Nowhere in the above did I suggest the additional current lets say was due to reflected power getting in to the output device. In fact just the opposite. The feedpoint impedance drops because of the combination of the forward power and the reflected power, thus the current rises in the output device. You should be fully aware of load matching by using sections of coax cable. The impedance transformations are due to the combination of the forward power traveling toward the junction and the reflected power traveling toward the junction from the load. Where the two waves of energy meet they add up in a vector fashion so the load at that points appears to be what you want.

> If there were two voltage points at a specific distance, the meter
> would only operate at a narrow range of frequencies. Many of these
> common SWR meters operate from 2 to 150 MHz. A two-point distance
> requirement would make this large operating range impossible.

If the calculation required an accurate distance. By using two points the circuit used allows the distance factor to "cancel out" so to speak so you don't really need to know what it is exactly as I remember it. I would have to go and look up the exact derivation for the method to get the details.

what does this have to do with 11 meter operators?

>
>Released: March 19, 2001
>
>
>By the Enforcement Bureau, San Francisco Field Office:
>
>I. INTRODUCTION
>
>
>
>In this Notice of Apparent Liability for Forfeiture ("NAL"), we find that
>Joshie Yasin Nakamura, Sr. has apparently violated Section 301 of the
>Communications Act of 1934 ("Act"), as amended, by operating an amateur radio
>station without a license issued by the Federal Communications Commission.
>Mr.
>Nakamura has also apparently violated Section 325(a) of the Act by
>transmitting
>a false distress signal. We conclude that Joshie Yasin Nakamura, Sr. is
>apparently liable for forfeiture in the amount of seventeen thousand dollars
>($17,000).
>
>
>II. BACKGROUND
>
>
>
>The Commission’s San Francisco Field Office received several complaints
>between January 26 and March 2, 2000 from amateur radio licensees and the
>Amateur Radio Relay League (ARRL) Official Observer (OO). They asserted that
>a
>radio station was operating on several amateur frequencies, including 445.175
>MHz, without proper authorization from the Commission from a residence in
>East
>Palo Alto, CA. In addition they asserted that the operator was causing
>interference by jamming and playing music.
>
>
>
>On March 20, 2000, agents from the Commission’s San Francisco Field Office
>observed unidentified radio transmissions on 445.175 MHz. Also, the
>internationally known distress signal "S O S" was being transmitted via Morse
>Code. The agents determined that the source of the transmissions was located

>at
>800 Weeks Street, East Palo Alto, CA. The agents conducted an inspection and
>found that Mr. Joshie Yasin Nakamura, Sr. was operating the station without
>authorization from the Commission and Mr. Nakamura was not in distress. Mr.
>Nakamura was verbally notified of these violations and issued a Notice of
>Unlicensed Radio Operation (NOUO) at that time.
>
>
>
>The Commission’s San Francisco Field Office continued to receive complaints
>between July 20 and September 8, 2000 from amateur radio licensees and the
>OO.
>They asserted that the same radio station was still operating on several
>amateur frequencies, including 144.63 MHz from a residence in East Palo Alto,
>CA and was continuing to cause interference to amateur communications by
>jamming and playing music.
>
>
>
>On September 10, 2000, agents from the Commission’s San Francisco Field
>Office observed radio transmissions on 144.63 MHz. The agents determined that
>the source of the transmissions was located at 800 Weeks Street, East Palo
>Alto, CA. The agents conducted an inspection and found that Mr. Joshie Yasin

So true.

You know in all the YEARS he has been flaming this group (with his full name, address and phone number posted in QRZ mind you) N8WWM has never had his phone rung, has never had anyone show up at his door, and has never had anyone approach him at a hamfest. Never.

These 'tough guys' can only be tough on this NG or on their local CB channel.

Bert, Are you for or against illegal 11 meter operation. A yes or No answer
will be fine along with an explanation. Notice I did call you by your
correct name and did not insult you as some others.
Thank You.

Tim he wasn't freebanding just using ham gear on 11 meters. Kinda like you, except he had a license to lose and you don't. We do know there are many illegal hams, but they are only hams because they have a license(aka Eitner, Toll Free, etc) they are not what i would call a "real" ham there main operating freq. are 11 meters, many Cbers got ham licenses to protect themselves from the FCC and recent rule changes Are they Real Hams.
I don't think so, they are just people who happen to hold a license. They don't care about Ham bands or protecting them. I know why you get mad you are a freebander and feel you are hurting no one you are a good operator on the air, etc And you probably think why are you guys hassleing me. Because Tim, you may be bleeding a ham who is monitoring 10 meters Well you say well I am not really running any big power, well you don't have to bleed someone over, and you will never know that you are doing it. Is that fair to the person who is legally allowed to use the freqs assigned to him. And your on 27.580 while he is monitoring a qrp station in Guam or wherever. Like I said most Freeband Dxers are good ops just on illegal freqs. Imagine your on 27.580 trying to talk to Australia and Toll Free Keys up on Super Bowl 6 and blankets your receive on 27.585
It won't make you real happy! Put the shoe on the other foot thats all think about what you may be doing. .

Hey Twistie, There are more high paying jobs in Pa than Florida you should come on up sometime. Sure beats working for $6 - 7.50 per hour in Florida. How was the DX today, For ID.

"You are correct about the wages, although that is beginning to change. Even when I drove part time I was independent contracting. Last real time I was held to an hourly wage punching a clock was at GM in the eighties and it was almost three times what you quoted. You can have Philthadelphia. Been there done that, Germantown, Kensington, few other places. Besides, I need the sun and you don't see it from November 'till some time in the spring and I ain't into ice fishing. Nope, rather catch them then take a swim in the afternoon in the crystal clear Gulf. Florida has been quite good to me actually. I know I will retire long before 55. DX conditions were ok but we had a bunch of storms to the southeast causing some havoc on our ears."

Ok Who is Twistedhed?

"And that has to do with what? I been here awhile. You just appeared and start posting like you are all familiar with everyone, rolling on a take on Prozac's handle, so the question might well be, "Who are YOU?" Also, if you were paying attention you would have seen Doug is a nocodee, as were his 2, er, 3 biggest cheerleaders, amongst them, one who continuously is obsessed with proving otherwise, even going as far as to say Doug said he wasn't involved, which never happened at all. An anonymous said it, but Doug never said it, but that didn't stop the little nocodee from claiming it. Matter of fact, Doug's past posts front off his little group of nocodees by name. Guess what? All nocodees and a Fin playing games. Send me a valid email (That would be a real domain, not a hotmail, not a yahoo, etc.) if you're not already blocked from this end and I'll send you all the posts you want of Doug AND his little group of 3 nocodees frolicking merrily in the stew they kick up. Somehow, I don't think you will send it because you are ashamed. If you were not ashamed you wouldn't have been forced into hiding."

Hello, I have a collection of Sam's Photofact CB Radio Books. I am MOST intrested in the FIRST 60 VOLUMES, but I would like to have them all.. The ones that I need are: 1, 5, 7, 10, 12, 13, 23, 24, 25, 27, 29, 30, 31, 32, 33, 36, 38, 39, 40, 43, 46, 47, 48, 49, 50, 52, 54, 56, 57, 58, 59, 60. If you have these Volumes, and would like to sell them, or have more...., I am intrested in buying all you have for sale..... Please E Mail me with what you have, along with the price.....
Thanks for reading.....
Maniac.

>Bert, Are you for or against illegal 11 meter operation. A yes or No answer
>will be fine along with an explanation.

Check my bio on www.qrz.com and you'll see that the very first thing I did to the G.E. 3 ch. 300mW CB h/t was open her up and modify it by replacing the fixed telescoping antenna with coax and a half-wave dipole. Since I didn't have my GROL yet, (I was 13 yrs. old) I had illegally modified my "rig."

The simple answer now is no. I no longer operate illegally because I do have a license (actually two) to lose and I want the amateur hf bands as well. But, you'll never find me beating up on any 11 meter operator, legal or otherwise. I actively support the removal of the 155.3 mi. limit for 11 meter contacts, albeit with pen and paper and/or e-mail rather than defiantly breaking the rules. I've "been there and done that" and if you familiarize yourself with my posts on the amateur NG's, you'll find that there are few CB-bashing threads where I haven't jumped in and taken it on the chin. (and dished it out pretty good as well)

The "old guard" amateurs dislike me because I represent the "11 meter operator" turned amateur and I am not alone. The future of AR is literally in the hands of guys like me. I always talk "to" 11 meter operators and never "at" them. Hope this helps you get a "handle" on who I am. I wear both hats, 11 meter and amateur radio operator, just fine. I think it's safe to say that you'll find AR to be a little more "11 meter friendly" in the years ahead as more CBers, ex-freebanders, and the like migrate to AR. (as if there aren't MANY hams that currently freeband)

>Notice I did call you by your

well then maybe a 5/8 ~ antenna would be good. There is the V5/8 which is really nice or the IMAX-2000. But the only benefit these will give you is lower radiation angle. If you have a lot of hills around you then maybe another 1/2~ antenna would be ideal. Lower radiation angle will provide more dx contacts as the reflected angle will be larger and possibly you'll be able to hear more local people farther away.

> commercial amps out there.

The key word here is "switching." What you are describing is not
truly linear; this is not a linear circuit. And, as I have said, the
concept of impedance goes out the window when you exit the linear
domain.

What you describe here is not analogous to a single transistor or tube
performing linear amplification.

> > High efficiencies

> way above the 50 percent value one would assume due to your argument.

A class B amplifier only operates in the linear region for 1/2 of the time. Technically, it is non-linear amplification. Two class B amplifiers can be combined in a push-pull output for a linear application. Class B amplifiers typically have an efficiency of 60 percent.

Once again, what you describe here is not analogous to a single transistor or tube performing linear amplification.

The maximum theoretical efficiency for a truly linear class A amplifier is 50 percent with 25 percent being a more typical figure. (This is right out of the ARRL Handbook).

Yes, they will fail. They will be dissipating the power from the other transmitter.

[snip]

> SSB radios, they don't need a linear output amplifier stage.

I admit that the impedance issue gets a little more complex with class B
and class C amplifiers -- for the very reasons I mentioned -- they
operate non-linearly (at least part of the time). But, at least for the
portions of the waveform where the device is operating in the linear
region, an impedance does exist.

> > One other note here. For full re-reflection, a conjugate match is
> > required.
>
> No. A conjugate match would simply absorb all the energy sent in its

> re-reflection of the energy.

These are the trivial conditions. With an open or short, you could have
no forward power and, hence, no reflected power. The only way to have
full forward power with full re-reflection of reflected power is with a
conjugate match.

> > A conjugate match is fully dependent on the input impedance
> > seen on your transmission line. You say "all power is re-reflected"

> > How can your transmitter always have a conjugate match without knowing
> > what impedance it will be connected to?
>
> You have your terminology hopeless turned around here. In one post you claim
> that a conjugate match does not cause any reflections and here you do.

What did I say?

You must have my words out of context. Consider a 50 ohm transmitter
connected to an antenna tuner which, in turn, is connected to a
mismatched transmission line. When tuned to a conjugate match, no power
will be reflected into the 50 ohm transmitter. The transmission line,
however, will have power traveling in both directions. All reflected
power on the line will be re-reflected by the matcher toward the
antenna.

> > The manufacturers have answered this question. They design for a

No argument here. The radio's output stage has to be able to hand the
reflected power.

Yes, that is the flaw in your claim.

> In fact just the
> opposite. The feedpoint impedance drops because of the combination of the

> device.

Look at what you are saying: (paraphrased) "the current rises in the
output device because of reflected power."

You've hit the nail on the head.

> You should be fully aware of load matching by using sections of coax
> cable. The impedance transformations are due to the combination of the
> forward power traveling toward the junction and the reflected power
> traveling toward the junction from the load. Where the two waves of energy

> be what you want.

Yes. Answer this question: If you are using a 50 ohm system (i.e. 50
ohm transmitter and 50 ohm coax), what does it mean when this system
feeds into a load that is not 50 ohms?
Answer: it means you have reflected power.

As I said before, saying you have an impedance mismatch is equivalent to
saying that you have reflected power. They are synonymous.

3014. Fiberglass mobile CB antennas - any suggestions?

Newsgroup: rec.radio.cb
Date: 2001-06-27 04:25:46 UTC
From: "Mr. Sabre" <phoenix@neobright.net>
Message-ID: <eed_6.312$cQ6.37610@cletus.bright.net>
Source record: 87104

Hey all, I'm about to set up a Uniden 78-series Bearcat CB in my car, and I'm now considering which make of antenna would be the best to use. I've settled on the fiberglass-whip continuously loaded style, since I have the room for it (no room in the garage for my car anyway) and it seems to give the best performance, but I still need to decide which brand to go with.

I'm thinking either Firestik or Wilson, since both make similar antennas... probably going for a 4' one, since anything larger will be taller than my car itself, which might look a little strange. It's an older Audi station wagon, all steel and with a long roof, so it should be a good ground plane.

So, any help is appreciated. Should I use co-phased antennas? Which brands support my radio's weather channel capability? Thanks in advance.

Mine operates from 26 to 32 Mhz. Does that only appy to the older radios?
The links can be set to limit it to 28 to 29.7 or CB.

The 2950 was never type accepted for CB use in the first place. The radio is no more within the rules to use on CB when modded than it was before it was modded. so your point is moot, ICBS - completely and totally moot.

So what's the point of your taunting, then? Nothing except the bravado of a source of hot-air who feels brave hiding behind a "handle" on an anonymizing NNTP host posting to a newsgroup of people who could really care less about your opinions, or lack thereof.

Not all OTs have a problem with 11 meter ops. Elmered a fair number myself.
Such an attitude is pretty dumb considering that the odds are that anyone
exposed to radio will almost certainly be exposed to CB first.
Being licensed longer than CB has existed deprived me of the choice but
that's no good reason to get huffy about it.

Hi Ian,

As far as fiberglass whips go, Wilson has the best gain test results.

If you are looking for the best performance, the Wilson 1000 or 5000
base loads are the most efficient antennas around. They are shunt fed,
one end of the coil is connected to ground the other end to the whip
and the coax feed is connected somewhere between the two ends. Because
of this coil design they are much less prone to out of band noise.

The total length is approx. 66". The whip is a tapered stainless steel
type and doesn't look bad. If the height is a problem, Wilson has a
Short Load Whip. This is a replacement whip with a center-loaded coil.
It will reduce the total height to about 3 feet. It will decrease the
performance slightly, but it will still blow away the fiberglass.
Check their site.

3050. Re: Are you actually on the radio????

Newsgroup: rec.radio.cb
Date: 2001-06-27 12:15:10 UTC
From: qrm2000@aol.com
Message-ID: <20010627081510.12402.00000645@ng-fr1.aol.com>
Source record: 87140

>>
>>Geeeez....I have YET to actually hear you knuckleheads on the radio! Perhaps
>>rec.radio.cb is simply your playground. Plug the radio in...key-up, and get
>>BUSY!. Or hide behind the keyboard.
>>

I've been reading this group for five years. In my estimate, 40% of our participants don't own an 11 meter radio.

10% own 11 meter radios but have not used them in a long time.

15% are ham operators. Of that number, Slightly over half use and enjoy 11 meters, in addition to Amateur activity. The remaining Amateurs take a passing interest in what happens outside the ham bands. A few of these are "preachers" who attempt to lead everyone to "salvation"--which is variously defined as stopping illegal operating, or recruiting more people to obtain a license. (Amateurs and CBers alike agree that the preachers are out of line and should stop posting in this forum. This is addressed specifically in the FAQ for this Newsgroup.)

Let's run the numbers. If I am correct, then approximately 57% of the participants in this NG are not actively on the air on 11 Meters. (40 plus 10 plus 7.5). That leaves 43% who are active.

This is consistent with the content of material being posted here. About 30% of the messages consist of operating questions , answers, and comments; i.e., the posts are about radios and antennas, solving a problem in the mobile, range expectations, etc.*

One can expect that another 15% of those using rec.radio.cb are one the air but don't ask questions or make comments. Remember how it was in school? There were some folks who never spoke out in class. But they ususally did pretty well on tests. (I guess they realized that listening is a great way to learn.)

Backing into the numbers this way gives 30% plus 15%. Once again, we arrive at a ratio of 45% of our participants who actually use CB to any degree.

Source record: 87142

>Thinking to upgrade my A99, has anyone compared other verticals to this
>antenna? p.s. I don't have the space to put up a beam.
Your location in New Jersey puts a strain on antennas and feedlines. Now that good weather is here, it may be time to give your A-99 a "tune up".

Check and tighten all mounting hardware. Make certain there is a good ground connection from the mounting bracket to earth. Remove and check the antenna connections at the base. Clean up any corrosion that may be present. Reconnect the coax, and waterproof the connection point with "goop". (CAUTION: Use gloves if handling a fiberglass antenna which has been exposed to weather for a year or more).

Inspect the coax for its entire run to the radio. Pay special attention to places where it might bind or blow in the wind. Frequent problem areas are where coax rubs against the mounting pole, and at points of entry into a house.

If you used inexpensive (or small) coax during the original installation, this is an ideal time to upgrade to the best quality cable that you can afford. Not only will this help with the transmitted signal, but you will hear much better, also.

Before beginning the tune-up, check the SWR. Check again when you are finished. It should be the same or better.

By the way, these tips are not just for New Jersey residents. Each area of the country has a unique environment. You can't leave anything out of doors without expecting to do maintenance. We all know that a washed/waxed automobile runs better. (grin). Antennas respond to TLC equally well.

> over many commercial amps. Twisted minds want to know."

Yes he has done the whole job himself, complete with building the amps too. The last I heard, when I talked to him a few months ago, he was trying to get several stereo shops interested in selling them. The principle problem he has being the commercial amplifiers are so cheap which cuts in to the low end of his targeted market, the 100 to 200 watt class. The big guys roll their product off automatated assemply lines. My firend has to hand assemply every one he builds.

I know at one time he has done custom amplifiers for a few people, however I don't know if he is willing to do anymore of that kind of work. The last one I know about him working on was a 400 watt RMS per channel amplifier, and that was over a year ago.

As far as heat sinks go, there are no secrets really. About the only thing you can do to improve heat sinking is use a better heat conducting material like copper in place of aluminum. What some people do is use a slab of copper bolted to the surface of an aluminum air cooled heat sink. The heat producing parts are then mounted to the copper. The copper is used as a "heat spreader" which will spread the heat out over a larger surface area with a lower temperature gradient. If you have a highly concentrated heat generator on an air cooled heat sink, making the heat sink longer past a point results in very little extra cooling because of the temperature gradient in the aluminum used.

The original idea for the design came out of a National Semiconductor application note for a high speed voltage comparator. The power devices used

were bipolar transistors. He changed the design to improve the linear characteristic of the amplifier, and switched to using MOSFET transistors. I think he simply buys all of his parts from Digi-Key like many people do for electronic parts. At one time he even made the PCB at home. I think he has that done by a regular PCB manufacturing company now when he needs boards for something he designs for sale.

At the moment I don't know if he is still activly looking to market this amplifier design. He tried before at one point and quit for a while, then tried again. It always seems to be the same problem in marketing them, his cost.

Class B RF amplifiers are most definitly "linear" amplifiers for modulated waveforms. Don't confuse the idea of linear amplification of the RF modulated envelope with amplification of the RF sine wave itself.

> The maximum theoretical efficiency for a truly linear class A amplifier
> is 50 percent with 25 percent being a more typical figure. (This is
> right out of the ARRL Handbook).

The power amplifiers used in the output stages of transmitters and amplifiers are however Class-B or Class-C, which have efficiencies above 50 percent.

> Yes, they will fail. They will be dissipating the power from the other
> transmitter.

I have pointed out sources where you can get further information that goes in to much more detail. It's up to you to do the reading.

I have consistently asked you how a source with a 50 ohm resistive internal impedance connected to a load of also 50 ohms resistive can have an efficiency greater than 50 percent. The example was one that you proposed. You can't explain it. I also suggested that you contact a major manufacture of RF amplifiers and ask them what their products efficiencies are to convince you that it is indeed greater than 50 percent. Between those two items, the "common sense" conclusion about amplifier efficiency from your example, and the real world data from a manufacture that will contradict that conclusion, should get you thinking that a wee bit more is going on tha t you suspect.

That's silly. I stated I can use a perfect linear voltage controlled voltage source as well, so you're going to tell me a "perfect linear voltage controlled voltage source" is not linear? And I have a feed back circuit that will linearly reduce the output voltage linearly with the increase of output current is also non-linear?!!!

As I stated before you can get that article I mentioned and read it for yourself. Then you can take up your arguments with the author and the handful of university professors who reviewed the article too.

Best part about this is it will cost you money for the stamp, the envelope, and wastes your time to put the above together and mail it. It takes me about 5 seconds to throw it in the trash at no cost to me.

The same goes for the phone number too. Have fun talking to a recording on my answering machine. Takes just a second to hit the delete button.

Oh, the above E-mail address is no good. It's hasn't been good for about 3 to 4 months or more. What a loser.

This is a CB newsgroup. PERIOD!
All this legal and illegal bullshit has nothing to do with radio. Just a bunch of bickering little babies. Cut the shit and lets get back to radio talk. As always with me, serious questions will be answered via e-mail.

A very keey word in the FCC findings.....Very defendable if really put to the test in a REAL court!

APPARENT::::

APPARENT, ILLUSORY, SEEMING, OSTENSIBLE mean not actually being what appearance indicates. APPARENT suggests appearance to unaided senses that is not or may not be borne out by more rigorous examination or greater knowledge <the apparent cause of the accident>. ILLUSORY implies a false impression based on deceptive resemblance or faulty observation, or influenced by emotions that prevent a clear view

Source record: 87053

Yes he has done the whole job himself, complete with building the amps too. The last I heard, when I talked to him a few months ago, he was trying to get several stereo shops interested in selling them. The principle problem he has being the commercial amplifiers are so cheap which cuts in to the low end of his targeted market, the 100 to 200 watt class. The big guys roll their product off automatated assemply lines. My firend has to hand assemply every one he builds.

"Yea, that's why I was interested in his cost effectiveness"

I know at one time he has done custom amplifiers for a few people, however I don't know if he is willing to do anymore of that kind of work. The last one I know about him working on was a 400 watt RMS per channel amplifier, and that was over a year ago.

"Do you know what it cost him to buid it, say, rough estimate?"

As far as heat sinks go, there are no secrets really. About the only thing you can do to improve heat sinking is use a better heat conducting material like copper in place of aluminum. What some people do is use a slab of copper bolted to the surface of an aluminum air cooled heat sink. The heat producing parts are then mounted to the copper. The copper is used as a "heat spreader" which will spread the heat out over a larger surface area with a lower temperature gradient. If you have a highly concentrated heat generator on an air cooled heat sink, making the heat sink longer past a point results in very little extra cooling because of the temperature gradient in the aluminum used.

Those POS Cherokees can scream if you turn everything you aren't supposed to but mine kept burning up. Met a guy who assisted and taught me how to rip out the speaker and throw in a fan and larger heat sinks and it's been trouble free ever since, but everything that could go wrong on it did until that was done. Now after being totally reworked, it works and sounds great. I think it was a chain reaction."

The original idea for the design came out of a National Semiconductor application note for a high speed voltage comparator. The power devices used were bipolar transistors. He changed the design to improve the linear characteristic of the amplifier, and switched to using MOSFET transistors. I think he simply buys all of his parts from Digi-Key like many people do for electronic parts. At one time he even made the PCB at home. I think he has that done by a regular PCB manufacturing company now when he needs boards for something he designs for sale.
At the moment I don't know if he is still activly looking to market this amplifier design. He tried before at one point and quit for a while, then tried again. It always seems to be the same problem in marketing

them, his cost.
--
"I asked because I have a good friend who has been into competitions all his life. He's now in his 40's but still travels to comps and places quite often. He is now in a 1999 Chevy Astro and the system cost more than the van. The guy throws money around on stuff like this like it grows on trees. He is always giving demos at the Miami comps and if your bud's amps are kick ass and he is interested in selling, my pal is always ooking for a better way or product. Manufacturers stuff doesn't impress him. Thanks for the info, Leland, very informative."--

Hi Twistedhed,
Actually, this line was part of a response to an AKC troll's message re. an enforcement action on a 10 meter incursion. I assumed (correctly, I believe) that this too was posted by the same AKC troll. I'll likewise assume you've read that one too.
Small advisory message; If you see a post from me that appears to be anti-11 meters, stop and reread it or look for the hidden angle. I'm a staunch supporter of 11 meters to the point of sometimes being verbally "spanked" by some of my ham breatheren for not being a good "convert" and adopting the "anti-CB" line. Don't construe that to mean that I think all hams are anti-11 meters or that all 11 meter operators are angels, I'm just reminding you of who I am and the amazing amount of B$ I've weathered in the support of the band that "started it all" for me.
As for the "Nazi" thing, I've only one uncle and a third cousin left on my mother's side of the family due to them. So no, I don't think anybody can really label me a "Nazi." Just try to factor in the source of the words when inferring their context. Take it easy now and keep the faith.
73 de Egbert...er, Bert (Try going through the NYC school system with that name. It makes the CB vs. ham "thingy" a piece of cake.) KC2HMN

"Touche', and taken care of via email (as you know) long before either post appeared. Thanks."

Frustrated and lungs full of water in Pa. said: Well you say well I am not really running any big power, well you don't have to bleed someone over, and you will never know that you are doing it.

"Explain the difference in bleed between my clean Tram on 27.405 and 27.415. Why would 415 'cause more bleed than 405?"

Is that fair to the person who is legally allowed to use the freqs assigned to him.

"Is WHAT fair? You are attempting to imply that everyone freebanding is running power or bleeding someone. Imagine, in all the years I have been playing radio I only had one instance where I interfered with something and that was long ago and with a dirty 100 watt box through an antenna with no real ground. I imagine I'm all wrong.. guess I need a pup from PA to tell me that my barefoot radio bouncing off the water at 12 watts ssb is wrecking the aviational and EMS bands."

And your on 27.580 while he is monitoring a qrp station in Guam or wherever. Like I said most Freeband Dxers are good ops just on illegal freqs.

"That is the first true claim you have set forth."

Imagine your on 27.580 trying to talk to Australia and Toll Free Keys up on Super Bowl 6 and blankets your receive on 27.585

"Usually doesn't happen thataway. I have some very big strappers near me. One bowl reg parks on the water near me and goes at it for a few. I flip the band and I don't hear him at all. I can hear some bleed from channel 4 to about 9, but he is only a stones throw from me. I like to listen to him 'cause he opens the DX door for me. Soon as he's done, I know I'm good for at least one or two that he tagged, or the ones he dusted off."

It won't make you real happy! Put the shoe on the other foot thats all think about what you may be doing. .

"I say better rejection in the radio. Hell, even my Galaxy won't get bleedover on 27.585 from the bowl. What kind of radios are you referring to?"

Twistie what in gods green Earth was a Southern Boy Like you doing in Kensington,Pa ? Kensington was known as the Meth (speed) Capital of the World in the 80's. From what I am told. You could always come up to Amish country and get a job makin furniture or Hex signs. Why you could even put a Cb in one of the Amish Buggies.
--
X-No-archive: yes

"To make a long story short, I was in the Poconos and had a chance to talk to some people who knew the Unicorn killer (remember 'ol Ira?) and wanted to see what I could get in the way of pics of old haunts and stompimg grounds. I was in college at the time on Christmas break and thought it might have made a decent project but it never materialized. I wouldn't know about the drug thing. I learned many years ago that some drugs can act as a catalyst and open certain doors that were never opened before, but once that door is open, one doesn't have to keep going through it back and forth. Pass through and move on. Hint for Pa: If you are gonna play with that stuff, stay away from the chemicals and man made stuff, it will kill you sooner or later.
Was in Lancaster a few years ago. The Mennonite that piloted our buggy wouldn't have wanted a cb there. They still plow fields the hard way. The only people I heard on the cb the entire few days I spent there were some truckers and some short lived DX after a rain late at night. Went to Zinns and bought me three hex signs from Paradise. You yankees come here and visit, where do you think us suthnahs go to chill? I know one thing, them yankee women sure like our accent. Said something about southern manners and charm and the way we always call a woman "ma'am" that jes' steals their heart."

Hi Dick,

Good to hear from you. Yes, you're absolutely correct re. "Not all OTs
have a problem with 11 meter ops." I had posted earlier that my
staunch support of 11 meters should not lead anyone to infer that I
believe all hams are anti-11 meters and/or all 11 meter ops are
angels. The thought carried over in my head and thus not repeated in
this post. Thanks for the reminder. Had my elmer not checked his
judicial robes at the door, I might still be working DX on 11 meters.
A kind word and a gentle nudge get a better response than calling
someone a "chicken bander" and/or reciting Part 95 verbatim over and
over. Take it easy "aging boy wonder."

P.S. Dick, I understand that I've been elevated in status as I've been
informed that my e-mail ID has been slimmed (forged) lately. I know
that you've had some experience with this. Is it a matter to be
ignored or dealt with? I dunno, never had this problem. Thanks.

Just proves what you don't know Twisted. Ignorant as ever. IDT terminated
all their dial-up accounts with everyone and gave all their dial-up users 30
days to find another Internet service provider, so I went with a cable modem
service. They wanted to get in to DSL services which makes them more money.
Send them an E-mail and ask if that's not the truth.

sales@corp.idt.net <<< Here's the address Twisted.

>>
>> NOTICE OF APPARENT LIABILITY FOR FORFEITURE
>>
>>
>> Released: March 19, 2001
>>
>>
>> By the Enforcement Bureau, San Francisco Field Office:
>>
>> I. INTRODUCTION
>>
>>
>>
>> In this Notice of Apparent Liability for Forfeiture ("NAL"), we find that
>> Joshie Yasin Nakamura, Sr. has apparently violated Section 301 of the
>> Communications Act of 1934 ("Act"), as amended, by operating an amateur
>radio
>> station without a license issued by the Federal Communications Commission.
>Mr.
>> Nakamura has also apparently violated Section 325(a) of the Act by
>transmitting
>> a false distress signal. We conclude that Joshie Yasin Nakamura, Sr. is
>> apparently liable for forfeiture in the amount of seventeen thousand
>dollars
>> ($17,000).
>>
>>
>> II. BACKGROUND
>>
>>
>>
>> The Commission's San Francisco Field Office received several complaints
>> between January 26 and March 2, 2000 from amateur radio licensees and the
>> Amateur Radio Relay League (ARRL) Official Observer (OO). They asserted
>that a
>> radio station was operating on several amateur frequencies, including
>445.175
>> MHz, without proper authorization from the Commission from a residence in
>East
>> Palo Alto, CA. In addition they asserted that the operator was causing
>> interference by jamming and playing music.

>>
>>
>>
>> On March 20, 2000, agents from the Commission's San Francisco Field Office
>> observed unidentified radio transmissions on 445.175 MHz. Also, the
>> internationally known distress signal "S O S" was being transmitted via
>Morse
>> Code. The agents determined that the source of the transmissions was
>located at
>> 800 Weeks Street, East Palo Alto, CA. The agents conducted an inspection
>and
>> found that Mr. Joshie Yasin Nakamura, Sr. was operating the station
>without
>> authorization from the Commission and Mr. Nakamura was not in distress.
>Mr.
>> Nakamura was verbally notified of these violations and issued a Notice of
>> Unlicensed Radio Operation (NOUO) at that time.
>>
>>
>>
>> The Commission's San Francisco Field Office continued to receive
>complaints
>> between July 20 and September 8, 2000 from amateur radio licensees and the
>OO.
>> They asserted that the same radio station was still operating on several
>> amateur frequencies, including 144.63 MHz from a residence in East Palo
>Alto,
>> CA and was continuing to cause interference to amateur communications by
>> jamming and playing music.
>>
>>
>>
>> On September 10, 2000, agents from the Commission's San Francisco Field
>> Office observed radio transmissions on 144.63 MHz. The agents determined
>that
>> the source of the transmissions was located at 800 Weeks Street, East Palo
>> Alto, CA. The agents conducted an inspection and found that Mr. Joshie
>Yasin
>> Nakamura, Sr. was operating the station without authorization from the
>> Commission. Mr. Nakamura was verbally notified of these violations and
>issued a
>> NOUO at that time.
>>
>>
>> III. DISCUSSION
>>
>>
>>
>> Section 301 of the Act sets forth generally that no person shall use or
>operate

>> any apparatus for the transmission of energy of communications or signals
>by
>> radio within the United States except under and in accordance with the Act
>and
>> with a license.
>>
>>
>>
>> Section 325(a) of the Act sets forth generally that no person shall
>knowingly
>> utter or transmit any false or fraudulent signals of distress.
>>
>>
>>
>> Based on the evidence before us, we find that on September 10, 2000,
>Joshie
>> Yasin Nakamura, Sr. operated radio transmission apparatus without a
>Commission
>> authorization in repeated and willful violation of Section 301 of the Act.
>And,
>> on March 20, 2000 Mr. Nakamura transmitted a false distress signal in
>willful
>> violation of Section 325(a) of the Act.
>>
>>
>>
>> Pursuant to The Commission's Forfeiture Policy Statement and Amendment of
>> Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines
>("Forfeiture
>> Policy Statement"), the base forfeiture amounts are $10,000 for unlicensed
>> operation, and $7,000 for causing malicious interference. In assessing the
>> monetary forfeiture amount, we must also take into account the statutory
>> factors set forth in Section 503(b)(2)(D) of the Act, which include the
>nature,
>> circumstances, extent, and gravity of the violation(s), and with respect
>to the
>> violator, the degree of culpability, any history of prior offenses,
>ability to
>> pay, and other such matters as justice may require. Applying the
>Forfeiture
>> Policy Statement and statutory factors to the instant case, a $17,000
>> forfeiture is warranted.
>>
>>
>>
>>
>> IV. ORDERING CLAUSES
>>
>>
>>

>> Accordingly, IT IS ORDERED THAT, pursuant to Section 503(b) of the
>> Communications Act of 1934, as amended, and Sections 0.111, 0.311 and 1.80
>of
>> the Commission's Rules, Joshie Yasin Nakamura, Sr. is hereby NOTIFIED of
>his
>> APPARENT LIABILITY FOR A FORFEITURE in the amount of seventeen thousand
>dollars
>> ($17,000) for violating Sections 301, 325(a), and 333 of the Act.
>>
>>
>>
>> IT IS FURTHER ORDERED THAT, pursuant to Section 1.80 of the Commission's
>Rules,
>> within thirty days of the release date of this NOTICE OF APPARENT
>LIABILITY,
>> Joshie Yasin Nakamura, Sr. SHALL PAY the full amount of the proposed
>forfeiture
>> or SHALL FILE a written statement seeking reduction or cancellation of the
>> proposed forfeiture.
>>
>>
>>
>> Payment of the forfeiture may be made by mailing a check or similar
>instrument,
>> payable to the order of the Federal Communications Commission, to the
>> Forfeiture Collection Section, Finance Branch, Federal Communications
>> Commission, P.O. Box 73482, Chicago, Illinois 60673-7482. The payment
>should

Boris works for a local corporation. BF was built to screen the e-mail of a well-known executive and performs admirably in that role. He gave me a copy to explore the newsgroups so I cannot do anything with it. The latest mods allow one to go deeper into the message to make the decision hence I can flush mibx2.

Sorry I can't help you.

Dick

Ok fine. Train when was the last time you carried on a decent QSO with someone on your perfectly legal cb radio? I bet you will have a hard time answering that.

Doug.

I have no idea. I'm not even sure if the guy forked over the money for my buddy to even start doing the design work. I did see part of the switching power supply section for the amp that he was going to use when he brought in to were I work one day. I'll have to ask him what ever happen to that job. Now I'm curious.

> Those POS Cherokees can scream if you turn everything you aren't
> supposed to but mine kept burning up. Met a guy who assisted and taught
> me how to rip out the speaker and throw in a fan and larger heat sinks
> and it's been trouble free ever since, but everything that could go
> wrong on it did until that was done. Now after being totally reworked,
> it works and sounds great. I think it was a chain reaction."

It all depends on how much margin there is in the design and how you use the amplifier. The second idea is the amplifier was never assembled right to begin with. For example the power devices were not torqued down right, not enough heat sink compound used, or maybe none at all, heat sink surface was not flat enough etc.

When dealing with high power semiconductors there are areas where it's easy to mess up without thinking about it being so important, until after the fact. I use liquid cooled heat sinks for power devices in the equipment I design. Air cooled heat sinks just can't handle the high power disapation. The liquid cooled heat sinks are machined finished to a flatness spec of 0.001 inch per linear inch on the surface and are made out of soild copper. The water passages are machined as channels on the backside and covered over with a silver soldered copper plate. A large heat sink like this is about 10 inches wide by 24 inches long and 0.5 inches thick. With 8 IGBT modules mounted on this heat sink. We can get about 400KW of power at 30 Khz out of the inverter using a phase lock loop to reduce the switching losses to near zero. (IGBT = Insulated Gate Bipolar Transistor)

It's not anti-CB. It's anti-illegal. There is a BIG difference.

Just because you are an ex-freebander/illegal op does not mean you are an asshole. No one holds the past against you.

However....if you think being a cheerleader for illegal CB is the way to Elmer good ham operators, guess again. When some idiot tells you about his 5KW CB setup (or bootlegging on 25 Mhz) and you smile and pat him on the back and reminisce about your own illegal career, that sends a message that "illegal is OK".

Well, good luck. Now you have Twistedhed for an a

Ha ha ha! Twisted says:

"Your honor, yes I break the FCC laws, but my excuse is that hypocrisy exists in

the world".

>Well, good luck. Now you have Twistedhed for an a

RF splatter from channel six must have broken the T1 line again. Damn. Allow
us to finish the thought. Good luck Bert, because now you have Twistedhed as an

ally. Check thru the Google/Deja archives and see what this character stands
for.

Anyway, it is our contention that there is SOMETHING DEFINITELY WARPED with hams

who hang around in CB newsgroups discussing the "how to's" of 11 meter amps and
channel mods. Regular ham radio must be boring to them. They seek the thrill of
the illicit, or whatever.

>I have a 100 watt amp for 26 to 30 Mhz which I can use legally on 29 Mhz FM.

So. Go to a ham newsgroup and tell them about it. Why are you bragging about it in a CB newsgroup? Small penis?

I used to buy Mad magazine for $0.25 a copy when living in Brooklyn circa 1970.
What me worry? Now you can hardly buy bubble gum for that price!

That's OK......It would be put to good use by a CB'r but a ham would just
screw it up thinking he can make it work better.
```
